# Katalog · Catalogue 160

Im Rahmen der technischen Weiterentwicklung und Programmbereinigung behalten wir uns vor, dass im Katalog angebotene Werkzeuge nicht mehr in der bisherigen Form lieferbar sind. In diesen Fällen beraten Sie unsere Mitarbeiter gerne bezüglich geeigneter Ersatzwerkzeuge.

Änderungen jeder Art oder Druckfehler von technischen Daten berechtigen nicht zu Ansprüchen. Bildliche Darstellungen sind nicht verbindlich.

Nachdruck von Text und Bildern, auch auszugsweise, ist ohne unsere Genehmigung nicht gestattet.

Due to technical development and programme adjustments, we reserve the right to discontinue any tools in the present form offered in the catalogue. In these cases, our staff will be happy to advise you with regard to suitable replacement tools.

Changes of any kind, or printing errors regarding technical details, do not justify any claims. All pictures are without obligation.

Reprinting of text or pictures, or extracts thereof, is not allowed without our prior permission.

## Mehr als 100 Jahre Präzision und Innovation. More than 100 years of precision and innovation.

EMUGE als Teil der EMUGE-FRANKEN Unternehmensgruppe entwickelt und produziert Präzisionswerkzeuge für die Gewinde- und Bohrungs-herstellung sowie für die Werkzeug- und Werkstückspannung. Das vielfältige Programm verfolgt dabei das Ziel, eine Werkzeug-Systemlösung ab der Maschinenspindel bis zur Fixierung des Werkstücks anzubieten.

Gewindebohrer, Gewindeformer und Gewindefräser stehen für eine Vielzahl an Abmessungen und Werkstoffen zur Verfügung.

Für hervorragende Bohrungsqualität sorgen Spiralbohrer, die zudem perfekt auf die Gewindewerkzeuge abgestimmt sind.

Ein ausgewähltes Programm an Schneideisen und Gewindewalzrollen ermöglicht die zuverlässige Herstellung von Außengewinden.

Zahlreiche Werkzeug-Aufnahmen und Gewindelehren vervollständigen den Systemgedanken und tragen durch ihre Produktmerkmale zur Produktivitätserhöhung bei.

Abgerundet wird das umfangreiche Produkt-Portfolio durch Standard- und Sonderlösungen für die Werkstückspannung, wodurch das Optimum im Fertigungsprozess erreicht wird.

EMUGE as part of the EMUGE-FRANKEN company association develops and manufactures precision tools for the production of threads and drill holes as well as for the clamping of tools and workpieces. The diverse programme aims at offering a tool system solution from the machine spindle to the clamping of the workpiece.

Taps, cold-forming taps and thread milling cutters are available for a variety of dimensions and materials.

Twist drills provide an excellent drill hole quality, which are also perfectly adapted to the threading tools.

A selected range of dies and thread rolls enables the reliable production of external threads.

Numerous tool holders and thread gauges complete the system-based approach and their product features contribute to an increase in productivity.

The extensive product portfolio is rounded off by standard and special solutions for workpiece clamping, thereby achieving the optimum result in the production process.

Vertriebsgebiete und Produktionsstandorte in Deutschland  
Sales areas and production locations in Germany

### FRANKEN – Unser Schwesterwerk in Rückersdorf

Als Systemlieferant im Bereich Frästechnik bietet FRANKEN ein breites Spektrum an Hochleistungswerkzeugen für die moderne Fertigung. Mit seiner Typen- und Schneidstoffvielfalt, dem hohen Standard und der kompromisslosen Präzision entsprechen diese Werkzeuge höchsten Qualitätsanforderungen und sind für fast alle Werkstückmaterialien geeignet. Ein durchgängiges System an Fräsespannmitteln rundet das Lagerprogramm ab.

### FRANKEN – Our sister company in Rückersdorf

As a system supplier in the field of milling technology FRANKEN offers a wide range of high-performance tools for the modern production. These tools meet the highest quality requirements thanks to their wide range of designs and cutting material and the high standard of uncompromising precision, and are suitable for almost all workpiece materials. A consistent range of milling chucks completes the stock programme.

## Wir sind in Ihrer Nähe. Weltweit. We are nearby. Throughout the world.

EMUGE-FRANKEN ist heute in allen wichtigen Industrienationen der Erde vertreten. Über 400 Kundenberater stehen weltweit im direkten Kundenkontakt und sorgen flächendeckend für eine individuelle Beratung vor Ort.

Neben einer anwendungsspezifischen Beratung erarbeiten wir auch Konzepte zur Optimierung Ihres Fertigungsablaufes oder entwickeln eigens für Sie Sonderwerkzeuge.

Ganz gleich, wo unsere Präzisionswerkzeuge und unsere Leistungsvielfalt gefragt sind – wir sind in Ihrer Nähe.

Today EMUGE-FRANKEN is represented in all important industrial nations around the world. More than 400 customer consultants guarantee the direct contact with the customer and provide individual comprehensive consultation on-site.

In addition to offering application-specific advice, we also prepare concepts for optimising your production process or develop special tools specifically for you.

No matter where our precision tools and our range of services are required – we are nearby.

Ihren EMUGE-FRANKEN Ansprechpartner finden Sie auf [www.emuge-franken.com/vertrieb](http://www.emuge-franken.com/vertrieb)  
To find your EMUGE-FRANKEN contact person, please see [www.emuge-franken.com/sales](http://www.emuge-franken.com/sales)

**Immer einen Schritt voraus: Mit Technologien von EMUGE-FRANKEN**

Mit unseren Werkzeugtechnologien nutzen Sie das Entwicklungspotenzial Ihrer Fertigungsprozesse optimal aus und bringen Ihre Zerspanungsprozesse auf ein neues, effizienteres Level.

**Always one step ahead: With technologies from EMUGE-FRANKEN**

Our tool technologies enable you to optimally exploit the development potential of your manufacturing processes and bring your machining processes to a higher, more efficient level.

**EMUGE Taptor®**

**Simultane Erstellung von Kernloch und Gewinde**

Das patentierte Gewindewerkzeug EMUGE Taptor® kombiniert das Vorbohren und die Gewindefertigung in einem Arbeitsschritt und führt bei der Herstellung von Innengewinden in Grund- und Durchgangslöchern zu einer signifikanten Zeiteinsparung.

Dieser Zeitvorteil ergibt sich aus mehreren Faktoren: Zum einen fällt der gesamte Vorbohrzyklus inklusive aller Verfahrens- und Positionierungen, inklusive des Werkzeugwechsels, weg. Zum anderen realisiert die Spannzangen-Aufnahme Speedsynchro Taptor® mit dem integrierten Übersetzungsgetriebe höhere Schnittgeschwindigkeiten und reduziert die Hauptzeit der einzelnen Gewindebearbeitung signifikant.

**Simultaneous production of drilled core hole and thread**

The patented EMUGE Taptor® threading tool combines pre-drilling and threading in one work step and leads to significant time savings in the production of internal threads in blind and through-holes.

This time advantage results from several factors: On the one hand, the entire pre-drilling cycle including all traverse paths and positioning, including tool change, is omitted. On the other hand, the Speedsynchro Taptor® collet holder enables higher cutting speeds thanks to its integrated transmission gear and significantly reduces machining main time in the production of threads.

Weitere Informationen siehe Seite 786-787

For more information see page 786-787

**EMUGE PunchDrill**

**Doppelter Bohrvorschub bei gleicher Axialkraft**

Zur Verringerung von Hauptzeiten bietet EMUGE den patentierten PunchDrill an. Mit diesem sind Zeitvorteile von 50 % und mehr in greifbarer Nähe, bei reduzierter oder gleichbleibender Axialkraft.

Geeignet ist der Hochvorschubbohrer zur Bearbeitung von Aluminium- und Magnesium-Gusslegierungen. Eigens neu entwickelte Oberflächenbehandlungen und eine speziell ausgelegte Hartstoffschicht ermöglichen eine sichere Spanabfuhr und erhöhen die Prozesssicherheit.

Ein besonderer Spanteiler hält die abgetragenen Späne kurz und hilft so, die Bearbeitungskräfte zu kontrollieren. Das Werkzeug punktet mit kürzeren Bearbeitungszeiten und einem hohen Zeitspannvolumen.

**Double drilling feed with the same axial force**

EMUGE offers the patented PunchDrill to reduce machining main times. Time savings of 50 % can be achieved with reduced or the same axial force.

The high-feed drill is suitable for machining aluminium and magnesium cast alloys. Newly developed surface treatments and a specially designed hard material layer enable reliable chip removal and increase process reliability.

A special chip divider keeps the chips short and thus helps to control the machining forces. The tool guarantees shorter machining times and a high metal removal rate.

Weitere Informationen siehe Seite 788-789

For more information see page 788-789

## EMUGE PunchTap

**Helikales Gewindeformen  
für neue Dimensionen der Produktivität**

Die patentierte EMUGE PunchTap-Technologie stellt neben Gewindebohren, Gewindeformen und Gewindefräsen eine weitere Technologie zur Herstellung von Innengewinden dar. Mit ihrem innovativen, sehr kurzen Bewegungsablauf eröffnet sie eine völlig neue Dimension der Produktivität.

Das Verfahren ist eine erstaunlich einfache Kinematik in drei Arbeitsschritten: Einfahren, Gewindeformen, Herausfahren. Vergleicht man den Werkzeugweg des EMUGE PunchTap mit dem Werkzeugweg herkömmlicher Gewindebohrer oder Gewindeformer, so fällt dieser bei einem Gewinde M6 mit 15 mm nutzbarer Gewindetiefe circa 15-mal kürzer aus.

Das Ergebnis ist eine deutliche Zeiteinsparung im Gewindezyklus von bis zu 75 %.

Weitere Informationen siehe Seite 790-791

**Helical thread forming  
for new dimensions in productivity**

The patented EMUGE PunchTap technology represents an advanced technology for the production of internal threads in addition to tapping, cold-forming of threads and thread milling. This technology enables a completely new dimension of productivity thanks to its innovative, extremely short motion sequence.

The process consists of an amazingly simple kinematics with three work steps: plunge, thread forming, pull-out. In a comparison of the tool path of the EMUGE PunchTap with the tool path of conventional taps or cold-forming taps, the PunchTap path is about 15 times shorter for an M 6 thread with 15 mm usable thread depth.

The result is a significant time saving of up to 75 % in the threading cycle.

For more information see page 790-791

## EMUGE Werkstück-Spannsysteme · Workpiece clamping systems

**Vielfältiges Know-how  
für anspruchsvolle Aufspannungen**

Beim Spannen von Werkstücken geht es nicht nur um die exakte Fixierung von Bauteilen für die Bearbeitung. Zu den hohen Anforderungen an die Präzision gesellen sich viele weitere Herausforderungen.

Dem begegnet EMUGE mit einem breiten Know-how und insgesamt neun überzeugenden Spannsystemen. Diese finden Sie in unseren ausgeklügelten Spanndornen, Spannfuttern oder stationären Spannmitteln mit mechanischer, pneumatischer oder hydraulischer Betätigung.

Mit unserer Vielfalt an Spannsystemen sind Sie für nahezu jedes Fertigungsverfahren bestens aufgestellt.

Weitere Informationen siehe Seite 792-796

**Wide range of know-how  
for demanding clamping tasks**

Clamping workpieces is not just a matter of precisely clamping components for machining tasks. In addition to the high demands on precision, there are many other challenges.

EMUGE meets this challenge with comprehensive know-how and a total of nine convincing clamping systems. They consist of our sophisticated clamping mandrels, clamping chucks or stationary clamping devices with mechanical, pneumatic or hydraulic actuation.

Our wide variety of clamping systems provides you with ideal solutions for almost any manufacturing process.

## Einsatzempfehlungen und Schnittwerte

### Bitte beachten:

Die in den jeweiligen Spalten angegebenen Schnittwerte sind Richtwerte, welche je nach Einsatzbedingungen (Material, Schmierung, Maschine, usw.) angepasst werden müssen.

v<sub>c</sub> = Schnittgeschwindigkeit [m/min]

f = Vorschub pro Umdrehung [mm/U]

## Application recommendation and cutting data

### Please note:

The cutting values listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.).

v<sub>c</sub> = Cutting speed [m/min]

f = Feed per revolution [mm/rev.]

Internationaler Werkstoffvergleich siehe Seite 764 - 785

International comparison of materials, see page 764 - 785

### T-Griff-Schraubendreher für Spannschrauben T-handle wrench for clamping screws

| Für<br>For<br>Ø D <sub>1</sub> | Größe<br>Dimension |                |
|--------------------------------|--------------------|----------------|
| 6 - 20                         | SW 5 x 150         | TWB03002.05015 |
| 25 - 32                        | SW 6 x 150         | TWB03002.06015 |

### Serviceleistungen

- Einbauteile des Spannsystems erneuern
- Radial-/Axialverstellung erneuern
- Dehnrate einstellen
- Drehmoment prüfen
- Rundlauf prüfen

### Service options

- Replace spare parts of the clamping system
- Replace radial / axial adjustment
- Adjust expansion rate
- Check torque
- Check concentricity

### Winkelschraubendreher für Verstellerschrauben Allen wrench for adjusting screws

| Für<br>For<br>Ø D <sub>1</sub> | Größe<br>Dimension |                |
|--------------------------------|--------------------|----------------|
| 6 - 12                         | SW 2,5             | TWB03001.02500 |
| 14 - 20                        | SW 3               | TWB03001.03000 |

# Einsatzempfehlungen und Schnittwerte

## Bitte beachten:

Die in den jeweiligen Spalten angegebenen Schnittgeschwindigkeiten (V<sub>C</sub> in m/min) sind Richtwerte, welche je nach Einsatzbedingungen (Material, Schmierung, Maschine, usw.) angepasst werden müssen.

Die empfohlenen Schnittgeschwindigkeiten sind bezogen auf einen Gewinde- Nenndurchmesser von 10 mm.

 = DIN-Form / Gänge (Anschnittlänge)

# Application recommendation and cutting data

## Please note:

The cutting speeds (V<sub>C</sub> in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.).

The recommended cutting speeds are related to a nominal thread diameter of 10 mm.

 = DIN form / threads (chamfer length)

Internationaler Werkstoffvergleich siehe Seite 764 - 785

International comparison of materials, see page 764 - 785
