| 7/8                    | 30,20                  | 14               | 150            | 28             | 22               | 18   | 29,35 |               |                         |                            |
| 1"                     | 33,25                  | 11               | 160            | 30             | 25               | 20   | 32,15 |               | C0921400.4042           |                            |

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei P = 24 Gg./1" und gröber um 0,05 mm kleiner vorzubohren.

Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for P = 24 threads/1" and coarser threads.

For further information regarding the recommended preparatory diameters, see page 317.

### BGF-Z2

#### Bohrgewindefräser

- Zur Herstellung von Kernloch, Senkfase und Innengewinde in einem Arbeitsgang
- Kein vorgearbeitetes Kernloch notwendig
- Abmessungsgebunden

#### Drill thread mills

- For the production of thread hole, chamfer and internal thread in one work process
- A premachined thread hole is not necessary
- For one thread size only

### BGF-Z3

#### Bohrgewindefräser

- Zur Herstellung von Kernloch, Senkfase und Innengewinde in einem Arbeitsgang
- Kein vorgearbeitetes Kernloch notwendig
- Abmessungsgebunden
- Speziell für vorgegossene Kernlöcher

#### Drill thread mills

- For the production of thread hole, chamfer and internal thread in one work process
- A premachined thread hole is not necessary
- For one thread size only
- Especially for pre-cast thread holes

### BGF-Z4

#### Bohrgewindefräser

- Zur Herstellung von Kernloch, Senkfase und Innengewinde in einem Arbeitsgang
- Kein vorgearbeitetes Kernloch notwendig
- Abmessungsgebunden
- Kurze Bearbeitungszeit durch 4 Nuten

#### Drill thread mills

- For the production of thread hole, chamfer and internal thread in one work process
- A premachined thread hole is not necessary
- For one thread size only
- Short machining time due to 4 flutes

### ZBGF

#### Zirkular-Bohrgewindefräser

- Zur Herstellung von Kernloch und Innengewinde in einem Arbeitsgang
- Anfasen des Kernlochs mit Stirnfase möglich
- Kein vorgearbeitetes Kernloch notwendig
- Abmessungsgebunden

#### Circular drill thread mills

- For the production of thread hole, chamfer and internal thread in one work process
- Chamfering the thread hole with face chamfer possible
- A premachined thread hole is not necessary
- For one thread size only

### ZBGF-S-CUT

#### Zirkular-Bohrgewindefräser

- Zur Herstellung von Kernloch und Innengewinde in einem Arbeitsgang
- Anfasen des Kernlochs mit Stirnfase möglich
- Kein vorgearbeitetes Kernloch notwendig
- Abmessungsgebunden
- Für nichtrostende Stahlwerkstoffe und Spezialwerkstoffe wie Inconel oder Titan

#### Circular drill thread mills

- For the production of thread hole and internal thread in one work process
- Chamfering the thread hole with face chamfer possible
- A premachined thread hole is not necessary
- For one thread size only
- For stainless steel materials and special materials such as Inconel or titanium

### ZBGF-HCUT

#### Zirkular-Bohrgewindefräser

- Zur Herstellung von Kernloch und Innengewinde in einem Arbeitsgang
- Anfasen des Kernlochs mit Stirnfase möglich
- Kein vorgearbeitetes Kernloch notwendig
- Abmessungsgebunden
- Für harte Werkstoffe ab 44 HRC

#### Circular drill thread mills

- For the production of thread hole and internal thread in one work process
- Chamfering the thread hole with face chamfer possible
- A premachined thread hole is not necessary
- For one thread size only
- For hard materials from 44 HRC

### GSF

#### Gewindefräser mit Senkfase

- Zur Herstellung von Senkfase und Innengewinde in einem Arbeitsgang
- Vorgearbeitetes Kernloch notwendig
- Abmessungsgebunden

#### Thread milling cutters with countersinking step

- For the production of countersunk chamfer and internal thread in one work process
- A premachined thread hole is necessary
- For one thread size only

369 - 388

389 - 404

405 - 426

405 - 426

427 - 441

**GSF-R30****Gewindefräser mit Senkfase**

- Zur Herstellung von Senkfase und Innengewinde in einem Arbeitsgang
- Vorgearbeitetes Kernloch notwendig
- Abmessungsgebunden
- Ruhiges Fräsen durch Nuten mit 30° Drallwinkel

**Thread milling cutters with countersinking step**

- For the production of countersunk chamfer and internal thread in one work process
- A premachined thread hole is necessary
- For one thread size only
- Smooth milling thanks to flutes with 30° helix angle

**GSF-Z****Gewindefräser mit Senkfase**

- Zur Herstellung von Senkfase und Innengewinde in einem Arbeitsgang
- Vorgearbeitetes Kernloch notwendig
- Abmessungsgebunden
- Ruhiges Fräsen durch Nuten mit 15° Drallwinkel
- Kurze Bearbeitungszeit durch mehr Nuten

**Thread milling cutters with countersinking step**

- For the production of countersunk chamfer and internal thread in one work process
- A premachined thread hole is necessary
- For one thread size only
- Smooth milling thanks to flutes with 15° helix angle
- Short machining time due to increased number of flutes

**GF****Gewindefräser**

- Zur Herstellung von Innengewinden
- Vorgearbeitetes Kernloch notwendig
- Steigungsgebunden
- Abmessungsübergreifend

**Thread milling cutters**

- For the production of internal threads
- A premachined thread hole is necessary
- For one pitch only
- For different thread sizes

**GF-R30****Gewindefräser**

- Zur Herstellung von Innengewinden
- Vorgearbeitetes Kernloch notwendig
- Steigungsgebunden
- Abmessungsübergreifend
- Ruhiges Fräsen durch Nuten mit 30° Drallwinkel

**Thread milling cutters**

- For the production of internal threads
- A premachined thread hole is necessary
- For one pitch only
- For different thread sizes
- Smooth milling thanks to flutes with 30° helix angle

**GF-R30-Long****Gewindefräser**

- Zur Herstellung von Innengewinden
- Vorgearbeitetes Kernloch notwendig
- Steigungsgebunden
- Abmessungsübergreifend
- Ruhiges Fräsen durch Nuten mit 30° Drallwinkel
- Langes Gewindeteil für tiefe Gewinde

**Thread milling cutters**

- For the production of internal threads
- A premachined thread hole is necessary
- For one pitch only
- For different thread sizes
- Smooth milling thanks to flutes with 30° helix angle
- Long thread part for deep threads

**GF-Z****Gewindefräser**

- Zur Herstellung von Innengewinden
- Vorgearbeitetes Kernloch notwendig
- Steigungsgebunden
- Abmessungsübergreifend
- Ruhiges Fräsen durch Nuten mit 15° Drallwinkel
- Kurze Bearbeitungszeit durch mehr Nuten

**Thread milling cutters**

- For the production of internal threads
- A premachined thread hole is necessary
- For one pitch only
- For different thread sizes
- Smooth milling thanks to flutes with 15° helix angle
- Short machining time due to increased number of flutes

**GF-Z-Extern****Gewindefräser**

- Zur Herstellung von Außengewinden
- Vorgearbeiteter Bolzen notwendig
- Steigungsgebunden
- Abmessungsübergreifend
- Ruhiges Fräsen durch Nuten mit 15° Drallwinkel

**Thread milling cutters**

- For the production of external threads
- A premachined bolt is necessary
- For one pitch only
- For different thread sizes
- Smooth milling thanks to flutes with 15° helix angle

### GF-Vario-Z

#### Gewindefräser

- Zur Herstellung von Innengewinden
- Vorgearbeitetes Kernloch notwendig
- Steigungsgebunden
- Abmessungsübergreifend
- Ruhiges Fräsen durch Nuten mit 15° Drallwinkel
- Kurze Bearbeitungszeit durch mehr Nuten
- Zum Entfernen des unvollständigen Ganges am Gewindeanfang

#### Thread milling cutters

- For the production of internal threads
- A premachined thread hole is necessary
- For one pitch only
- For different thread sizes
- Smooth milling thanks to flutes with 15° helix angle
- Short machining time due to increased number of flutes
- For removing the incomplete thread at the start of the thread

### GF-Vario-Z-AZR1

#### Gewindefräser

- Zur Herstellung von Innengewinden
- Vorgearbeitetes Kernloch notwendig
- Steigungsgebunden
- Abmessungsübergreifend
- Ruhiges Fräsen durch Nuten mit 15° Drallwinkel
- Kurze Bearbeitungszeit durch mehr Nuten
- Zum Entfernen des unvollständigen Ganges am Gewindeanfang
- Stark reduzierte Axialkräfte durch ausgesetzte Zahnreihen

#### Thread milling cutters

- For the production of internal threads
- A premachined thread hole is necessary
- For one pitch only
- For different thread sizes
- Smooth milling thanks to flutes with 15° helix angle
- Short machining time due to increased number of flutes
- For removing the incomplete thread at the start of the thread
- Significantly reduced radial forces due to alternating tooth rows

### GF-KEG

#### Gewindefräser

- Zur Herstellung von kegeligen Innengewinden
- Zylindrisch oder besser kegelig vorgearbeitetes Kernloch notwendig
- Steigungsgebunden
- Abmessungsübergreifend

#### Thread milling cutters

- For the production of tapered internal threads
- A premachined cylindrical, or preferably, a tapered thread hole is necessary
- For one pitch only
- For different thread sizes

### GF-KEG-R15-Long

#### Gewindefräser

- Zur Herstellung von kegeligen Innengewinden
- Zylindrisch oder besser kegelig vorgearbeitetes Kernloch notwendig
- Steigungsgebunden
- Abmessungsübergreifend
- Ruhiges Fräsen durch Nuten mit 15° Drallwinkel
- Langes Gewindeteil für tiefe Gewinde

#### Thread milling cutters

- For the production of tapered internal threads
- A premachined cylindrical, or preferably, a tapered thread hole is necessary
- For one pitch only
- For different thread sizes
- Smooth milling thanks to flutes with 15° helix angle
- Long thread part for deep threads

### ZGF

#### Zirkular-Gewindefräser

- Zur Herstellung von Innengewinden
- Vorgearbeitetes Kernloch notwendig
- Steigungsübergreifend
- Abmessungsübergreifend
- Anfasen des Kernlochs mit Stirnfase möglich

#### Circular thread milling cutters

- For the production of internal threads
- A premachined thread hole is necessary
- For different thread pitches
- For different thread sizes
- Chamfering the thread hole with face chamfer possible

### ZGF-Z

#### Zirkular-Gewindefräser

- Zur Herstellung von Innengewinden
- Vorgearbeitetes Kernloch notwendig
- Steigungsübergreifend
- Abmessungsübergreifend
- Anfasen des Kernlochs mit Stirnfase möglich
- Kurze Bearbeitungszeit durch mehr Nuten

#### Circular thread milling cutters

- For the production of internal threads
- A premachined thread hole is necessary
- For different thread pitches
- For different thread sizes
- Chamfering the thread hole with face chamfer possible
- Short machining time due to increased number of flutes

### ZGF-S-CUT

#### Zirkular-Gewindefräser

- Zur Herstellung von Innengewinden
- Vorgearbeitetes Kernloch notwendig
- Steigungsgebunden
- Abmessungsübergreifend
- Für nichtrostende Stahlwerkstoffe und Spezialwerkstoffe wie Inconel oder Titan

#### Circular thread milling cutters

- For the production of internal threads
- A premachined thread hole is necessary
- For one pitch only
- For different thread sizes
- For stainless steel materials and special materials such as Inconel or titanium

**ZGF-HCUT****Zirkular-Gewindefräser**

- Zur Herstellung von Innengewinden
- Vorgearbeitetes Kernloch notwendig
- Steigungsgebunden
- Abmessungsübergreifend
- Für harte Werkstoffe ab 44 HRC

**Circular thread milling cutters**

- For the production of internal threads
- A premachined thread hole is necessary
- For one pitch only
- For different thread sizes
- For hard materials from 44 HRC

463 - 378

**ZIRK-GF****Zirkular-Gewindefräskörper**

mit einer oder zwei Mehrzahn-Wechselplatten (MZP)

- Zur Herstellung von Innen- oder Außengewinden
- Vorgearbeitetes Kernloch oder vorgearbeiteter Bolzen notwendig
- Steigungsgebunden
- Abmessungsübergreifend

**Circular thread milling bodies**

with one or two multi-tooth exchangeable inserts (MZP)

- For the production of internal or external threads
- A premachined thread hole or a premachined bolt is necessary
- For one pitch only
- For different thread sizes

**ZIRK-GF****Zirkular-Gewindefräskörper**

mit 3-Zahn-Wechselplatte (3ZP)

- Zur Herstellung von Innen- oder Außengewinden
- Vorgearbeitetes Kernloch oder vorgearbeiteter Bolzen notwendig
- Steigungsübergreifend
- Abmessungsübergreifend

**Circular thread milling bodies**

with 3-tooth exchangeable inserts (3ZP)

- For the production of internal or external threads
- A premachined thread hole or a premachined bolt is necessary
- For different thread pitches
- For different thread sizes

479 - 490

**ZIRK-GF****Zirkular-Gewindefräskörper**

mit Stirn-Wechselplatte (SWP)

- Zur Herstellung von Innen- oder Außengewinden
- Vorgearbeitetes Kernloch oder vorgearbeiteter Bolzen notwendig
- Steigungsübergreifend
- Abmessungsübergreifend
- Kurze Bearbeitungszeit durch mehr Nuten

**Circular thread milling bodies**

with exchangeable face insert (SWP)

- For the production of internal or external threads
- A premachined thread hole or a premachined bolt is necessary
- For different thread pitches
- For different thread sizes
- Short machining time due to increased number of flutes

**Gigant****Zirkular-Gewindefräskörper**

mit 2-Zahn- oder 4-Zahn-Wendeplatten

- Zur Herstellung von Innen- oder Außengewinden
- Vorgearbeitetes Kernloch oder vorgearbeiteter Bolzen notwendig
- Steigungsübergreifend
- Abmessungsübergreifend

**Circular thread milling bodies**

with 2-tooth or 4-tooth indexable inserts

- For the production of internal or external threads
- A premachined thread hole or a premachined bolt is necessary
- For different thread pitches
- For different thread sizes

491 - 509

**Gigant****Fräsringe**

für Gigant Zirkular-Gewindefräskörper

- Zum Entfernen des unvollständigen Ganges am Gewindeanfang
- Kein zeitlicher Mehraufwand

**Milling rings**

for Gigant circular thread milling bodies

- For removing the incomplete thread at the start of the thread
- No additional time required

**MoSys****Kombinierbares Plan- und Stufsenk-System**

- Zur Komplettbearbeitung von z.B. Bohrung, Gewinde und Plansenkung

**Counterbore and stepped bore system for free combination**

- For the complete machining of thread hole, thread and spot face

510 - 512

### Mögliche Modifikationen an Gewindefräsern

### Possible modifications on thread milling cutters

#### Stirrfase (ohne oder mit Stirnschnitt)

#### Face chamfer (with or without cutting face)

##### Geeignet für:

- Alle Typen GF und GSF
- Alle Typen BGF (Stirrfase am Bohrteil)

##### Suitable for:

- All types GF and GSF
- All types BGF (face chamfer on the drilling part)

##### Bemerkung:

- Stirrfase für zirkulares Anfasen des Kernloches
- Zusätzlicher Stirnschnitt für zirkulares Planfräsen

##### Note:

- Face chamfer for circular chamfering of the thread hole
- Additional cutting face for circular face milling

#### Unvollständigen Gang entfernen

#### Removal of incomplete thread

##### Geeignet für:

- Alle Typen GF, GSF und BGF

##### Suitable for:

- All types GF, GSF and BGF

##### Bemerkung:

- Am schaftseitigen Ende des Frästeils wird eine Stufe mit einer Länge von min. 1 x P hinterschleifen
- Bei entsprechender Eintauchtiefe wird beim Gewindefräsen der unvollständige, gratbehaftete Gewindeauslauf abgefräst (entfernt)

##### Note:

- At the rear end of the thread part, a step with a length of min. 1 x P is relief-ground
- If the tool plunges to a correct depth during the thread milling process, the incomplete thread run-out with its burr is milled off (removed)

#### Halsfreischliff

#### Recessed neck

##### Geeignet für:

- Alle Typen GF und GSF (Senkfase entfällt)

##### Suitable for:

- All types GF and GSF (no countersinking step)

##### Bemerkung:

- Für größere Gewindetiefen (gesamte Gewindetiefe setzt sich aus zwei Fräsdurchläufen zusammen)
- Für einen konstanten Schnittdruck wird die Frästeillänge und die Halslänge im Verhältnis 1:1 aufgeteilt!
- Die Frästeillänge und der Versatz für einen zweiten Fräsdurchlauf sind immer ein ganzzahliges Vielfaches der Profilteilung

##### Note:

- For larger thread depths (total thread depth is achieved by a double milling process)
- For constant cutting pressure, the thread part length and the neck length are arranged in a ratio of 1:1!
- The thread part length and the offset for a second milling process are always a whole-number multiple of the thread pitch

## Mögliche Modifikationen an Gewindefräsern

## Possible modifications on thread milling cutters

## AZR

## Radial ausgesetzte Zahnreihen

## Radially alternating tooth rows

## Geeignet für:

- Alle Typen GF, GSF und BGF

## Suitable for:

- All types GF, GSF and BGF

## Bemerkung:

- Durch radial ausgesetzte Zahnreihen werden die Seitenkräfte beim Gewindefräsen reduziert; die zyklisch fehlenden Gewindelücken werden durch zusätzliche zirkuläre Fräsumläufe gefräst

## Note:

- Radially alternating tooth rows help to reduce lateral forces in thread milling; the alternating missing gaps in the thread are produced by additional circular milling orbits

## IKZN

## Innere Kühlschmierstoff-Zufuhr mit Austritt in den Nuten

## Internal coolant supply exiting in the flutes

## Geeignet für:

- Alle Typen GF und GSF

## Suitable for:

- All types GF and GSF

## Bemerkung:

- Stirnseitig verschlossene Axialbohrung für die Bearbeitung von Durchgangslöchern
- Für maximale Stabilität des Frästeils sind die seitlichen Austrittsbohrungen axial versetzt angeordnet

## Note:

- Axial coolant bore closed up at the tool face for the production of through hole threads
- For maximum stability of the cutting part, the lateral coolant holes are axially staggered

## Schaftkühlruten

## Coolant grooves along the shank

## Geeignet für:

- Alle Typen GF, GSF und BGF

## Suitable for:

- All types GF, GSF and BGF

## Bemerkung:

- Für die Bearbeitung von Durchgangslöchern
- Zusätzlich oder ersatzweise zu IKZ oder IKZN
- Ggf. unterstützend zur Kühlung der Senkfase bei GSF und BGF oder des Plansenkers bei MoSys-Anwendungen

## Note:

- For the production of through hole threads
- In addition or as an alternative to IKZ or IKZN
- Possible support in the cooling of the countersinking step of GSF and BGF type tools, or of the plane milling head in MoSys applications

# Einsatzempfehlungen und Schnittwerte

## Bitte beachten:

Die in den jeweiligen Spalten angegebenen Schnittwerte sind Richtwerte, welche je nach Einsatzbedingungen (Werkzeugspannung, Werkstückspannung, Gewindetiefe, usw.) angepasst werden müssen.

$v_c$  = Schnittgeschwindigkeit [m/min]

$f_z$  = Vorschub pro Zahn [mm]

$f_b$  = Vorschub beim Bohren [mm/U]

# Application recommendation and cutting data

## Please note:

The cutting values listed in the respective columns are standard values which have to be adjusted to individual work conditions (tool clamping, workpiece clamping, thread depth, etc.).

$v_c$  = Cutting speed [m/min]

$f_z$  = Feed per tooth [mm]

$f_b$  = Drilling feed [mm/rev.]

Internationaler Werkstoffvergleich siehe Seite 764 - 785

# NPT

ANSI/ASME B1.20.1

a) Zylindrisch vorarbeiten  
Cylindrical preparation of thread hole

EMUGE NPT-Gewindefräser sind für die Lochformen a) und b) geeignet.

EMUGE NPT thread milling cutters are suited for the hole forms a) and b).

**Anwendungshinweis:** Es wird ein NC-Programm für schneckenförmiges Wendelnutfräsen benötigt, da sonst ein Absatz im gefrästen Gewinde entsteht  
**Application recommendation:** You must have an NC programme for spiral-worm keyway milling, otherwise the finished thread will have a stepped profile

Gewindebohrer für kegelige  
Innengewinde siehe Seite 248 - 263Taps for internal tapered threads,

Weitere Ausführungen auf Anfrage  
Further designs upon request

**Anwendungshinweis:** Es wird ein NC-Programm für schneckenförmiges Wendelnutfräsen benötigt, da sonst ein Absatz im gefrästen Gewinde entsteht  
**Application recommendation:** You must have an NC programme for spiral-worm keyway milling, otherwise the finished thread will have a stepped profile

**NPTF**

ANSI B1.20.3

## a) Zylindrisch vorarbeiten

Cylindrical preparation of thread hole

EMUGE NPTF-Gewindefräser sind für die Lochformen a) und b) geeignet.

EMUGE NPTF thread milling cutters are suited for the hole forms a) and b).

Weitere Ausführungen auf Anfrage  
Further designs upon request

**Anwendungshinweis:** Es wird ein NC-Programm für schneckenförmiges Wendelnutfräsen benötigt, da sonst ein Absatz im gefrästen Gewinde entsteht  
**Application recommendation:** You must have an NC programme for spiral-worm keyway milling, otherwise the finished thread will have a stepped profile

Je nach Anwendung empfehlen wir, max. 3 Gigant modular sprinter  
miteinander zu kombinieren  
Depending on the application, we recommend to combine up to a maximum  
of 3 Gigant modular sprinter

Die Innensechskant-Schraube zum stirnseitigen Verschließen der Kühlmittel-Bohrung  
ist im Lieferumfang enthalten  
The hexagon socket screw to close the coolant hole on the face side is included with the delivery

Lieferumfang: ohne 2-Zahn-Wendeplatten, mit Spannschrauben  
Delivery: without 2-tooth indexable inserts, with clamping screws

**Achtung:** Beim Anziehen der Spannschraube ist das **empfohlene Anzugsdrehmoment** von **0,9 Nm** zu beachten  
**Note:** When tightening the clamping screw, the **recommended tightening torque 0.9 Nm** must be used

Fräsringe zum Entfernen des unvollständigen Ganges siehe Seite 506  
Milling rings for removal of the incomplete thread, see page 506

Aufnahmen und Verlängerungen für Gigant modular und Gigant modular sprinter siehe Seite 508 - 509  
Holders and extensions for Gigant modular and Gigant modular sprinter, see pages 508 - 509

10

## 2-Zahn-Wendeplatten für Steigungsbereich bis 3 mm (8 Gg/1")

2-tooth indexable inserts for a pitch range up to 3 mm (8 tpi)

|                                                                                                                                                                                                                                                                                                                                                                                                                        |                  |   |   |                                      |               |                                                                                       |                                                                                       |                        |

Je nach Anwendung empfehlen wir, max. 3 Gigant modular sprinter miteinander zu kombinieren  
Depending on the application, we recommend to combine up to a maximum of 3 Gigant modular sprinter

Die Innensechskant-Schraube zum stirnseitigen Verschließen der Kühlmittel-Bohrung ist im Lieferumfang enthalten  
The hexagon socket screw to close the coolant hole on the face side is included with the delivery

Das Maß  $l_7$  muss ein Vielfaches der Steigung P des herzustellenden Gewindes sein  
The measurement  $l_7$  must be a multiple of the pitch P of the thread to be produced

Lieferumfang: ohne 4-Zahn-Wendeplatten, mit Spannschrauben  
Delivery: without 4-tooth indexable inserts, with clamping screws

Fräsringe zum Entfernen des unvollständigen Ganges siehe Seite 506  
Milling rings for removal of the incomplete thread, see page 506

Aufnahmen und Verlängerungen für Gigant modular und Gigant modular sprinter siehe Seite 508 - 509  
Holders and extensions for Gigant modular and Gigant modular sprinter, see pages 508 - 509

**Achtung:** Beim Anziehen der Spannschraube ist das **empfohlene Anzugsdrehmoment von 3,0 Nm** zu beachten

**Note:** When tightening the clamping screw, the **recommended tightening torque 3.0 Nm** must be used

Das Maß  $l_7$  muss ein Vielfaches der Steigung P des herzustellenden Gewindes sein  
The measurement  $l_7$  must be a multiple of the pitch P of the thread to be produced

Je nach Anwendung empfehlen wir, max. 3 Gigant modular sprinter  
miteinander zu kombinieren  
Depending on the application, we recommend to combine up to a maximum  
of 3 Gigant modular sprinter

Die Innensechskant-Schraube zum stirnseitigen Verschließen der Kühlmittel-Bohrung  
ist im Lieferumfang enthalten  
The hexagon socket screw to close the coolant hole on the face side is included with the delivery

Lieferumfang: ohne 4-Zahn-Wendeplatten, mit Spannschrauben  
Delivery: without 4-tooth indexable inserts, with clamping screws

**Achtung:** Beim Anziehen der Spannschraube ist das **empfohlene Anzugsdrehmoment** von **5,0 Nm** zu beachten  
**Note:** When tightening the clamping screw, the **recommended tightening torque** 5.0 Nm must be used

Fräsringe zum Entfernen des unvollständigen Ganges siehe Seite 506  
Milling rings for removal of the incomplete thread, see page 506

Aufnahmen und Verlängerungen für Gigant modular und Gigant modular sprinter siehe Seite 508 - 509  
Holders and extensions for Gigant modular and Gigant modular sprinter, see pages 508 - 509

Das Maß  $l_7$  muss ein Vielfaches der Steigung P des herzustellenden Gewindes sein  
The measurement  $l_7$  must be a multiple of the pitch P of the thread to be produced

Je nach Anwendung empfehlen wir, max. 3 Gigant modular sprinter miteinander zu kombinieren  
Depending on the application, we recommend to combine up to a maximum of 3 Gigant modular sprinter

Die Innensechskant-Schraube zum stirnseitigen Verschließen der Kühlmittel-Bohrung ist im Lieferumfang enthalten  
The hexagon socket screw to close the coolant hole on the face side is included with the delivery

Lieferumfang: ohne 4-Zahn-Wendeplatten, mit Spannschrauben  
Delivery: without 4-tooth indexable inserts, with clamping screws

**Achtung:** Beim Anziehen der Spannschraube ist das **empfohlene Anzugsdrehmoment von 5,0 Nm** zu beachten  
**Note:** When tightening the clamping screw, the **recommended tightening torque 5.0 Nm** must be used

Aufnahmen und Verlängerungen für Gigant modular und Gigant modular sprinter siehe Seite 508 - 509

### „MoSys“ gestattet vielseitige Plan- und Stufensenkoperationen!

In einer Aufspannung erzielen Sie folgende Vorteile:

- Geringe Anzahl an Werkzeugen
- Wenig Lagerplätze und Lagerkosten
- Kurze Bearbeitungszeiten

„MoSys“ erfüllt folgende Voraussetzungen:

- Einfache Montage
- Hohe Steifigkeit
- Hohe Maßgenauigkeit
- Modular aufgebaut und einsetzbar

### “MoSys” makes a large number of counterbore and stepped bore operations possible!

With just one clamping operation, you enjoy a number of advantages:

- Smaller tool quantities
- Fewer magazine places and reduced stocking costs
- Shorter machining times

“MoSys” answers to the following requirements:

- Easy assembly
- High degree of rigidity
- High dimensional precision
- Modular construction for universal application

### Zur Angebotsausarbeitung werden folgende Daten benötigt:

- Werkstückzeichnung mit evtl. Störkontur
- Maschinenseitige Aufnahme mit Kühlschmierstoff-Übergabe
- Detaillierte Senkkontur
- Herzustellende Gewindeabmessung einschließlich Gewindetiefe
- Bohrungsform (Durchgangsloch, Grundloch)
- Kernlochdurchmesser (falls vorhanden)
- Zu bearbeitender Werkstoff

### For submitting an offer, we need the following information:

- Workpiece drawing with possible obstruction contours
- Shank connection on the machine side, with coolant supply
- Detailed countersink contour
- Size of the thread to be produced, including thread depth
- Type of hole (through hole or blind hole)
- Drilled hole diameter (if known)
- Workpiece material

# Einsatzempfehlungen und Schnittwerte

## Bitte beachten:

Die in den jeweiligen Spalten angegebenen Schnittgeschwindigkeiten (v<sub>C</sub> in m/min) sind Richtwerte, welche je nach Einsatzbedingungen (Material, Schmierung, Maschine, usw.) angepasst werden müssen.

Die empfohlenen Schnittgeschwindigkeiten sind bezogen auf einen Gewinde- Nenndurchmesser von 10 mm.

 = Anschnittlänge

# Application recommendation and cutting data

## Please note:

The cutting speeds (v<sub>C</sub> in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.).

The recommended cutting speeds are related to a nominal thread diameter of 10 mm.

 = Chamfer length

Internationaler Werkstoffvergleich siehe Seite 764 - 785

International comparison of materials, see page 764 - 785

EMUGE bietet ein umfangreiches Programm an Gewindewalzrollen, Schneckenwalzrollen, Rändelrollen und Korbverzahnungsrollen für praktisch alle Bearbeitungsfälle.

EMUGE offers you a comprehensive programme of thread rolls, worm rolls, knurling rolls and serration rolls for practically all application cases.

### Verfahrensmerkmale:

- Spanloses Verfahren
- Außenbearbeitung
- Erzeugung der Profilkonturen durch Materialverdrängung
- Walzen-Grundwerkstoff ist hochlegierter Werkzeugstahl

### Voraussetzungen:

- Werkstoffe mit einer Bruchdehnung  $\geq 8\%$
- Speziell abgestimmte Vorarbeitsdurchmesser der Rohlinge zum Walzen erforderlich

### Vorteile:

- Rollglatte Oberflächen durch Gefügeverdichtung
- Oberflächengüte  $R_a 0,2$  am gewalzten Profil
- Höhere Korrosionsbeständigkeit durch kleinere Reaktionsflächen
- Ununterbrochener Faserverlauf
- Erhöhte statische und dynamische Festigkeit des Profils
- Hohe Form- und Maßgenauigkeit
- Erhebliche Werkstoffersparnis, da nicht vom Außendurchmesser des Werkstücks, sondern vom Flanken- bzw. Vorarbeitsdurchmesser ausgegangen wird
- Kurze Bearbeitungsdauer

**Somit können gewalzte Gewinde größeren Belastungen ausgesetzt werden. Sie besitzen höhere Verschleißfestigkeit und sind korrosionsbeständiger. Eine Steigerung der Wirtschaftlichkeit bei der Gewindeherstellung durch extrem kurze Fertigungszeiten ist ein weiterer Vorteil, der besondere Beachtung verdient.**

### Nachteile:

- Nicht vollständig ausgeformter Außendurchmesser
- Spezialmaschinen erforderlich

Für weitere Informationen kontaktieren Sie bitte den für Sie zuständigen Vertriebspartner.

### Process characteristics:

- Chipless process
- External machining
- Production of profile contours by material displacement
- Rolls made of high-alloyed tool steel

### Requirements:

- Workpiece materials with a breaking elongation  $\geq 8\%$
- Specially adjusted blank diameters are necessary for rolling

### Advantages:

- Smooth rolled surfaces achieved by densification of the material structure
- Surface quality grade  $R_a 0.2$  on the rolled profile
- Increased corrosion resistance due to reduced reaction surfaces
- Uninterrupted grain structure
- Increased static and dynamic strength of the profile
- High dimensional and form precision
- Considerable material savings, since work does not start from the major diameter of the workpiece but from its pitch, or preparatory diameter
- Short machining times

This means that rolled threads can better withstand stress: they show increased wear resistance, and are better protected against corrosion. Another advantage which deserves attention lies in the possibility of improving economic efficiency in thread production by the extremely short machining times which are common in thread rolling.

### Disadvantages:

- Incompletely formed major diameter
- Special machines are necessary

### Allgemeines

Für das Metrische ISO-Gewinde ist in DIN ISO 1502 ein Lehrensystem festgelegt mit dem Zweck, eine uneingeschränkte Austauschbarkeit der Werkstückgewinde zu gewährleisten.

Es gelten folgende Grundsätze:

1. Der Hersteller darf kein Werkstückgewinde liefern, dessen Gewinde-Istmaß außerhalb der festgelegten Grenzen liegt (z.B. der Flankendurchmesser und der Paarungsflankendurchmesser).
2. Der Besteller darf kein Werkstückgewinde zurückweisen, dessen Gewinde-Istmaß innerhalb der festgelegten Grenzen liegt (z.B. der Flankendurchmesser und der Paarungsflankendurchmesser).

Natürlich werden heute in der modernen Gewindefertigung auch andere Prüfmethoden angewandt, z.B. Messen mit anzeigenden Messgeräten. Bei Anwendung anderer Methoden ist darauf zu achten, dass diese zu gleichen Ergebnissen führen.

**In Zweifelsfällen sind für das Metrische ISO-Gewinde die in der Norm DIN ISO 1502 empfohlenen Lehren für die Prüfung entscheidend. Für andere Gewindesysteme (z.B. Amerikanische Gewinde) gelten andere Lehrennormen.**

Wird in der Fertigung hauptsächlich durch Messen geprüft, so ist es unumgänglich, dass eine stichprobenmäßige Prüfung mit den genormten Lehren durchgeführt wird. Die Bezugstemperatur für die Maße der Lehren und Werkstücke ist 20 °C. Wird bei anderen Temperaturen geprüft, sind die Ausdehnungskoeffizienten zu berücksichtigen.

### Vorteile der EMUGE-Gewindelehren

- Gealterter Lehrenstahl, dadurch sehr maßstabil
- Härte deutlich über dem genormten Mindestwert
- Hartstoffschichten zur höheren Verschleißfestigkeit der Gut-Seite möglich
- Großes Lagersortiment an Standard- und Sondertoleranzen
- Kurze Lieferzeit
- Sonderkonstruktionen auf Anfrage
- Auf Wunsch mit Werkskalibrierschein (durch neutrales Prüflabor Fa. DECOM im Hause)
- Kostenfreie Beschriftung von kundenspezifischen Angaben bei Neu-Fertigung und Sonder-Anfertigung

### General information

For the Metric ISO thread, a gauge system is specified in DIN ISO 1502 for the purpose of securing the unlimited exchangeability of workpiece threads.

The following basic principles apply:

1. The manufacturer must not supply a workpiece thread the actual thread size of which is outside of the specified limits (e.g. pitch diameter or mating pitch diameter).
2. The buyer must not reject a workpiece thread the actual thread size of which is inside of the specified limits (e.g. pitch diameter or mating pitch diameter).

In modern thread production, there are of course other inspection methods also, e.g. measuring with dial-type measuring instruments. Whenever other methods are applied it is important to make sure that the same results are achieved.

**In any case of doubt, the gauges recommended in the standard DIN ISO 1502 will decide the result of the inspection for the Metric ISO thread.**

**For other thread systems (e.g. American threads), other gauge standards apply.**

If the inspection work in production is done mainly by measuring, it is still absolutely necessary to perform random sample inspection with the standardised gauges. The reference temperature for the gauge and workpiece dimensions is 20 °C. If inspections are done at other temperatures, the corresponding expansion coefficients have to be taken into account.

### Advantages of our EMUGE thread gauges

- Aged gauge steel, hence extremely true-to-dimension
- Hardness noticeably over the standardised minimum requirements
- Hard surface coatings for extra high wear resistance available on the go side
- Large stock of standard and special tolerances
- Short delivery
- Special designs available upon request
- Inspection certificates available upon request (issued by independent in-house inspection lab DECOM)
- Free-of-charge laser marking to customer's specifications on gauges coming from new production and specially produced gauges

## EMUGE-Gewindelehren – Prüftechnik in Perfektion

## EMUGE Thread gauges – Gauging technology to perfection

**Ab  $\varnothing 5,5$  mm** erhält jeder Gutlehrendorn eine **Schmutznut**, dadurch sichere Lehnung auch unter schwierigen Einsatzbedingungen

**Starting from dia. 5.5 mm** each go plug gauge is provided with a **dirt flute**, for safe gauging even under difficult conditions

**Unvollständige Gewindegänge** werden bis zum Beginn des Vollprofils **entfernt**, dadurch stabiler Gewindeanfang

**Incomplete threads are removed** until the beginning of the full thread, in order to create a stable thread start

**Lehrgreif mit 2 Beschriftungsflächen**

Ausreichend Platz für kundenspezifische Angaben (auf Wunsch auch von EMUGE durchführbar)

**Gauge handles with double surfaces for marking**, leaving sufficient space for customer's specific requirements (marking to be provided by EMUGE upon request)

**Gerändelter Griff**

(leichte Handhabung auch mit öligen Fingern)

**Knurled handles**

(safe handling even with greasy fingers)

**Eindeutige Ident-Nr. jeder Gewindelehre** stellt die notwendige EMUGE werksinterne Rückverfolgbarkeit sicher

**Individual ident no. for each single gauge** for safe tracing back to production at EMUGE

**Rote Farbkennzeichnung der Ausschussseite**  
**Red marking of the no-go side**

**Einführansatz**

zur verbesserten Einführung des Ausschlusslehrenkörpers

**Reduced thread start**

for easy insertion of the no-go gauge body

**Funktionsgerechte Kern-Freiarbeitung** der Ausschluss-Gewindelehren  
**Recessed minor thread diameter** of the no-go gauges for safe function

**$\leq \varnothing 40$  mm**

Form R nach DIN 2240-1 mit Einsteckkegel.  
Gut- und Ausschussseite auf einem Lehrgreif.

**$> \varnothing 40$  mm und  $\leq \varnothing 200$  mm**

Ähnlich DIN 2240-2 mit Kugelbefestigung.  
Gut- und Ausschussseite auf je einem Lehrgreif.  
Sicherer Halt bei Lehnung und Prüfung der Lehre im 3-Draht-Messverfahren.

**$\leq \varnothing 40$  mm**

Form R acc. DIN 2240-1 with fixing taper.  
Go and no-go side on one gauge handle.

**$> \varnothing 40$  mm und  $\leq \varnothing 200$  mm**

Made acc. DIN 2240-2 with ball fixture.  
Go and no-go side are mounted each on a single handle.  
Safe grip for gauging and checking of the gauge in a 3-wire measuring process.

<sup>1)</sup> Der Lehrdorn Nr. 2 ist auf Grund der Aussparung starker Beanspruchung ausgesetzt und deshalb TIN-beschichtet  
The thread plug gauge no. 2 is exposed to strong wear due to its recess, and is therefore TIN-coated

## Das neue Lehrens-system nach DIN EN 10226-3, ISO 7-2

Ziel der Normung war, ein weltweit akzeptiertes Lehrens-system für das **kegelige Außengewinde R**, das **zylindrisches Innengewinde Rp** und das **kegelige Innengewinde Rc** nach ISO 7 zu schaffen.

Bisherige Normen, z.B. die deutschen Normen DIN 2999-2 bis -6, die britische Norm BS 21, die französische Norm NF-E 03-165 und die italienische Norm UNI ISO 7-2:1984 sind ungültig.

## The new gauge system acc. DIN EN 10226-3, ISO 7-2

The standardisation has been undertaken with the aim of providing a worldwide accepted gauge system for the **tapered external thread R**, the **cylindrical internal thread Rp** and the **tapered internal thread Rc** acc. ISO 7.

Previous standards, e.g. the German standards DIN 2999-2 to -6, the British standard BS 21, the French standard NF-E 03-165 and the Italian standard UNI ISO 7-2:1984 do not apply anymore.

> Ø 1" nur als Einzellehrdorne erhältlich (G-GR-LD (L<sub>1</sub>), G-GR-LD (L<sub>3</sub>))  
available only as separate plug gauges (G-GR-LD (L<sub>1</sub>), G-GR-LD (L<sub>3</sub>))

Gewinde-Grenzlehrringe G-GR-LR (L<sub>2</sub>) NPTF auf Anfrage  
Thread ring gauges go/no-go G-GR-LR (L<sub>2</sub>) NPTF upon request

**Lehrensysteem NPTF-2 nach ASME B1.20.5****für NPTF-Innengewinde**

- L<sub>1</sub>-Gewinde-Lehrdorn (Ausführung 4-Step)
- L<sub>3</sub>-Gewinde-Lehrdorn (Ausführung 4-Step)
- Lehrdorn Crest Check (6-Step),  
zur Prüfung der Gewindespitzen am Kerndurchmesser
- Lehrdorn Root Check (6-Step),  
zur Prüfung des Gewindegrundes am Außendurchmesser

**für NPTF-Außengewinde**

- L<sub>1</sub>-Gewinde-Lehrring (Ausführung 4-Step)
- L<sub>2</sub>-Gewinde-Lehrring (Ausführung 4-Step)
- Lehrring Crest Check (6-Step),  
zur Prüfung der Gewindespitzen am Außendurchmesser
- Lehrring Root Check (6-Step),  
zur Prüfung des Gewindegrundes am Kerndurchmesser

Gewidegrenzlehren für Lehrensysteem NPTF-2 auf Anfrage

**Gauge system NPTF-2 acc. ASME B1.20.5****for NPTF internal thread**

- L<sub>1</sub> thread plug gauge (4-step design)
- L<sub>3</sub> thread plug gauge (4-step design)
- Plug gauge Crest Check (6-step),  
for checking the thread crest on the minor diameter
- Plug gauge Root Check (6-step),  
for checking the thread root on the major diameter

**for NPTF external thread**

- L<sub>1</sub> thread ring gauge (4-step design)
- L<sub>2</sub> thread ring gauge (4-step design)
- Ring gauge Crest Check (6-step),  
for checking the thread crest on the major diameter
- Ring gauge Root Check (6-step),  
for checking the thread root on the minor diameter

Thread gauges go/no-go for gauge system NPTF-2 upon request

### Toleranzangaben nach DIN ISO 5855

Bei der Toleranzangabe des Innengewindes von 4H5H (bis MJ 5x0,8 von 4H6H) und des Außengewindes von 4h6h steht als erstes die Toleranzklasse des Flankendurchmessers, gefolgt von der Toleranzklasse des Kerndurchmessers (Innengewinde) oder des Außendurchmessers (Außengewinde).

Am **Innengewinde** beträgt die Flankendurchmesser-Toleranz 4H und die Kerndurchmesser-Toleranz 5H (bzw. 6H). Die Kerndurchmesser-Toleranz wird durch den Gewindelehrdorn nicht erfasst und deshalb nicht angegeben.

Am **Außengewinde** beträgt die Flankendurchmesser-Toleranz 4h und die Außendurchmesser-Toleranz 6h. Die Außendurchmesser-Toleranz wird durch den Gewindelehrring nicht erfasst und deshalb nicht angegeben.

### Tolerance specifications according to DIN ISO 5855

The tolerance specification of 4H5H (up to MJ 5x0.8 of 4H6H) for the internal thread and 4h6h for the external thread indicates in the first digits the tolerance class of the pitch diameter, followed by the tolerance class of the minor diameter (internal thread) or the major diameter (external thread).

The tolerance of the pitch diameter of the **internal thread** is 4H and the tolerance of the minor diameter is 5H (respectively 6H).

The tolerance of the minor diameter is not checked by the thread plug gauge and therefore not indicated.

The tolerance of the pitch diameter of the **external thread** is 4h and the tolerance of the major diameter is 6h.

The tolerance of the major diameter is not checked by the thread ring gauge and therefore not indicated.

### Die Lehrung des EMUGE SELF-LOCK-Gewindes

Wir empfehlen unser zweiteiliges Lehrensystme, das der gängigen Praxis der Gut- und Ausschusslehre entspricht und vollkommen für die Gewindeprüfung ausreicht, wenn sichergestellt ist, dass das LK-Gewinde mit unseren profilgetreuen Gewindebohrern hergestellt wird.

Es gibt keine allgemein gültige Norm (z.B. DIN-Norm) über das EMUGE SELF-LOCK-Gewinde. Andere Werkzeughersteller könnten daher mit anderen Gewinde-Grenzmaßen arbeiten. Daher empfehlen wir, EMUGE SELF-LOCK-Gewinde ausschließlich mit EMUGE SELF-LOCK-Gewindelehren zu prüfen.

Die Lehrung des Sägezahn-Profils beruht auf dem gleichen Prinzip, jedoch ist bei Gut- und Ausschusslehren auf die richtige Einschraubseite zu achten.

### The gauging of the EMUGE SELF-LOCK thread

We recommend using our two-piece gauge system which corresponds to the usual combination of go and no-go gauge and is perfectly sufficient for the gauging of the thread, provided that the LK threads were produced with our true-to-profile EMUGE taps.

There is no generally applicable standard (e.g. DIN standard) for the EMUGE SELF-LOCK thread, so other manufacturers may use different limit sizes for their threads. For this reason, we recommend gauging EMUGE SELF-LOCK threads exclusively with EMUGE SELF-LOCK gauges.

The gauging of the saw-tooth profile works on the same principle, with the only difference that both the go and the no-go plug gauge have to be used in the correct direction.

Werden Strehler oder Gewindefräser eingesetzt, empfehlen wir die zusätzliche Verwendung der EMUGE HRPG-Lehre. Diese prüft den unteren Rampenpunkt bzw. eventuelle Rampenwinkelfehler.

If chasers or thread milling cutters are used, we recommend using an additional EMUGE HRPG gauge. This gauge serves to check the lower ramp point or possible ramp angle errors.

Gemäß DIN 13-50 beträgt beim geformten Innengewinde die **Toleranz** für den Flankendurchmesser 6H, für den **Innengewinde-Kerndurchmesser 7H**.

According to DIN 13-50, in a cold-formed thread the **tolerance** for the pitch diameter is 6H, for the **minor diameter of the internal thread** it is **7H**.

### Eigenschaften des kegeligen Gewinde-Rundlauf-Prüfdorns:

- Rundlaufgenauigkeit des Antastzylinders ( $\varnothing d_2$ ) zum Gewinde-Außendurchmesser ( $\varnothing d_1$ ) kleiner 0,01 mm
- Flankendurchmesser des Gewinde-Gutlehrdorns am 3. Gewindegang ( $3 \times P$ ) → ausreichende Führung im Gewinde
- Flankendurchmesser des Gewinde-Ausschusslehrdorns am vorletzten Gewindegang ( $l_2 - 1 \times P$ ) → Klemmung des Prüfdorns
- Der Gewinde-Außendurchmesser ist zylindrisch auf das Maß des Gewinde-Gut-Lehrdorns gefertigt um zu gewährleisten, dass der Prüfdorn im Flanken- und nicht im Außendurchmesser klemmt

### Handhabung des kegeligen Gewinde-Rundlauf-Prüfdorns:

- Der Prüfdorn wird von Hand bis zum Festsitz in das Innengewinde eingeschraubt
- Durch den leichten Formkegel im Flankendurchmesser auf die gesamte Gewindelänge ( $l_2$ ) zentriert sich die Achse des Prüfdorns mit der Achse des Innengewindes
- Die Koaxialität des Innengewindes kann über einen Messtaster am Antastzylinder ( $\varnothing d_2$ ) geprüft werden
- Die Prüfung des Innengewindes auf Lehrenhaltigkeit erfolgt mit herkömmlichen Gewinde-Lehrdornen (siehe Seite 546 - 547)

### Characteristics of the tapered plug gauge for checking radial run-out:

- Run-out accuracy of the contact cylinder ( $\varnothing d_2$ ) towards major diameter of thread ( $\varnothing d_1$ ) less than 0.01 mm
- Pitch diameter of the thread plug gauge go at third thread ( $3 \times P$ ) → sufficient lead in the thread
- Pitch diameter of the thread plug gauge go/no-go at the second to the last thread ( $l_2 - 1 \times P$ ) → clamping of the check plug gauge
- The major diameter of the thread is cylindrically made to fit the thread plug gauge go to guarantee that the check plug gauge jams in the pitch diameter and not in the major diameter

### Handling of the tapered thread plug gauge for checking radial run-out:

- The check plug gauge is manually screwed into the internal screw until properly tightened
- Thanks to the light taper shape in the pitch diameter along the entire length of the thread ( $l_2$ ), the axis of the check plug gauge is centred with the axis of the internal thread
- The coaxiality of the internal thread can be checked with a measuring probe at the contact cylinder ( $\varnothing d_2$ )
- The internal thread can be checked for true-to gauge accuracy with conventional thread plug gauges (see pages 546 - 547)

### Sechskant-Bit-Adapter 1/4" für GUT-Lehrenkörper

Der Sechskant-Bit-Adapter dient als Aufnahme eines Gut-Lehrenkörpers in eine antreibende Einheit. Sein Einsatzgebiet findet er beim immer wiederkehrenden Lehren von Gewindelöchern mit einer Tiefe von bis zu 4 x D.

Durch die Ausführung der Drehbewegung mittels einer Antriebseinheit (z.B. Akkuschrauber, Druckluftschrauber oder Bohrmaschine) wird ein ermüdungsfreies Arbeiten im Dauerbetrieb ermöglicht.

### Hexagon bit adapters 1/4" for gauging bodies GO

The hexagon bit adapter serves as holder for the gauge body GO in a power driven unit. It is used for repeatably gauging thread holes with a maximum depth of 4 x D.

As a power driven unit such as cordless or pressurised air screwdrivers or drill machines provide the rotation, an effortless and long-term working is possible.

**EG-Konformitätserklärung****CE-Kennzeichnung für Ausführungen digital IW**

EMUGE erklärt, dass die bezeichneten Produkte in ihrer Konzipierung und Bauart sowie in den in Verkehr gebrachten Ausführungen den grundlegenden Sicherheits- und Gesundheitsanforderungen der EG-Richtlinie 2004/108/EG über elektromagnetische Verträglichkeit (EMV) sowie der EG-Richtlinie 2006/95/EG über Niederspannung entspricht. Bei einer mit EMUGE nicht abgestimmten Änderung der Produkte verliert diese Erklärung ihre Gültigkeit.

**Hinweis:**

Eine gleichlautende Erklärung für Märkte außerhalb der Europäischen Union (bzw. dem EWR) liegt EMUGE nicht vor. Der Inverkehrbringer der Produkte außerhalb der EU übernimmt die Verantwortung für den Einsatz gemäß der im Drittland geltenden Gesetzesvorgaben selbst.

**EC Declaration of Conformity****CE marking for designs digital IW**

EMUGE declares, that the described products, based on their conceptual design and version placed on the market complies with the essential Safety and Health Regulations according to Directive 2004/108/EC concerning Electromagnetic Compatibility (EMC) and with the Low Voltage Directive 2006/95/EC. If any alteration is made on this products without the prior consent of EMUGE, this declaration shall cease to apply.

**Remark:**

An identical declaration for markets outside the European Union (resp. the European Economic Area) is not available to EMUGE. The distributor of the product outside the EU assumes sole responsibility for the use in accordance with the specific legal regulations in the third country.

Bei der Innengewindeherstellung gibt es zunehmend Anforderungen, die eine genaue Position des Gewindeanfangs vorschreiben. Dies ist beispielsweise bei automatischer Verschraubung von Schaltern, Sensoren oder elektronischen Steckern der Fall, bei denen die radiale Ausrichtung eine direkte Auswirkung auf die Funktionsfähigkeit hat.

Auch im Motorenbau gibt es Erfordernisse für stellungsgebundene Gewinde. So ist zum Beispiel bei der Montage von Zündkerzen die Lage der Masseelektrode zum Gewinde vorgeschrieben, was zu einer besseren Verbrennung und damit zur Reduzierung der Emissionsgrenzwerte führt. Speziell für die stellungsgebundene Herstellung und Prüfung von Zündkerzengewinden wurde das PoCoSys-Programm entwickelt. Es ermöglicht die manuelle Gewindeprüfung direkt an der Fertigungsmaschine oder die maschinelle Gewindeprüfung auf 3D-Messmaschinen.

Alle Komponenten wurden perfekt aufeinander abgestimmt – von der Werkzeugaufnahme über die Gewindewerkzeuge bis hin zu den Einstelllehren und Prüfmitteln.

There is an increasing number of demands in the production of internal threads with specified starting position. For example, this applies to automatic screwing processes of switches, sensors or electronic plugs where the radial orientation has a direct impact on function.

There are also requirements for threads with specified starting position in engine constructions. For example, in the assembly of spark plugs, the position of the ground electrode relative to the thread is specified, which results in better combustion thus reducing the emission limit values. The PoCoSys programme was developed especially for the production and inspection of spark plug threads with specified thread start. It enables the manual inspection of threads directly on the production machine or a machine conducted test of threads on 3D measuring machines.

All components are perfectly matched to each other – from the tool holder via the threading tools to the setting gauges and test equipment.

Am Zylinderkopf sieht man in der Vergrößerung die Planfläche, die den Bezugspunkt für das Zündkerzengewinde darstellt. Der Gewindeanfang liegt hier z.B. an der Oberseite (orangene Markierung). Dieser ist auch mit dem Zündkerzenhersteller abgestimmt, der wiederum die Zündkerze mit eingeschränkter Toleranz anbietet.

A magnified image of the cylinder head shows the plane surface, which serves as reference point for the spark plug thread. The start of the thread in this case is at the top (orange marking). This is also coordinated with the spark plug manufacturer, who in turn offers the spark plug with a tighter tolerance.

### PoCo-Gauge Box

Koffer mit Gewindelehrenset  
zur manuellen Gewindeprüfung

Box with set of thread gauges  
for manual position inspection

Die Komponenten der **PoCo-Gauge Box** ermöglichen eine manuelle Prüfungsstellungsgewinde direkt am Bauteil an der Fertigungsmaschine. Hierfür werden keine weiteren Geräte oder Messmaschinen benötigt.

Durch die einfache Handhabung ist ein kontinuierliches Prüfen an der Maschine möglich, wodurch Abweichungen frühzeitig erkannt werden. Dies führt zu Zeit- und Ressourceneinsparungen gegenüber der Prüfung auf 3D-Messmaschinen.

The components of the **PoCo-Gauge Box** enable the manual position inspection of threads with specified start position directly on the workpiece at the production machine. No additional devices or measuring machines are required.

The easy handling facilitates the continuous inspection at the machine and thereby helps to recognise deviations at an early stage.

This results in time and resource savings compared to inspections with 3D measuring machines.

#### Kundennutzen

- Bis zu 90% Ersparnis gegenüber einer Messung mit Messmaschine
- Gewindeprüfung mittels Gewinde-Gut-Lehrdorn
- Flankendurchmesserunabhängiges Prüfen
- Praxisnahe Prüfung der Gewindestellung zur Planfläche
- Kein Umspannen des Bauteils notwendig
- Einfache Bedienung, keine aufwändige Einweisung erforderlich
- Sofortiges Ablesen der Zündkerzenstellung
- Einbindung in den Zertifizierungszyklus möglich
- Kundenspezifische Anpassung des Prüfsystems an das Werkstück

#### Customer benefits

- Savings up to 90% compared to measuring with a measuring machine
- Thread inspection with a thread plug gauge GO
- Gauging independent of pitch diameter
- Practical inspection of thread position relative to flat face
- No reclamping of workpiece necessary
- Easy handling, no time-consuming instruction required
- Immediate reading of spark plug position
- Integration into certification cycle possible
- Customer specific adaptation of inspection system to workpiece

| 2. Fixierschraube zum Befestigen der <b>PoCo-Plate</b> eindrehen.                                          | 2. Tighten fixing screw to fasten the <b>PoCo-Plate</b> .                                                 |
| 3. Einschrauben der <b>PoCo-Gauge</b> in das Zündkerzengewinde und Anziehen mit einem Drehmomentschlüssel. | 3. Screw in the <b>PoCo-Gauge</b> into the thread for the spark plug and tighten with a torque wrench.    |
| 4. Ablesen der Zündkerzenstellung (Gewindeanfang) an der Skalierung.                                       | 4. Read the position of the spark plug on the scale.                                                      |

#### Überprüfung der PoCo-Gauge auf Positionsgenauigkeit

Der **PoCo-Gauge** und die **PoCo-Gauge Master** sind werksseitig voreingestellt. Für eine Selbstkontrolle des **PoCo-Gauge** wird die **PoCo-Gauge Master** benötigt.

Der **PoCo-Gauge** wird in die **PoCo-Gauge Master** eingeschraubt und mit einem festgelegten Drehmoment angezogen. Die Markierungslinien zeigen den Ist-Zustand der **PoCo-Gauge Arbeitslehre** an und müssen zwischen Neuzustand (Go) und Verschleißgrenze (No-Go) liegen.

Bei einer Abweichung sind **PoCo-Gauge** und **PoCo-Gauge Master** zum Prüfen im Set an EMUGE zu senden.

#### Inspection of positional accuracy of the PoCo-Gauge

The **PoCo-Gauge** and the **PoCo-Gauge Master** are preset by EMUGE. For a self-check of the **PoCo-Gauge** the **PoCo-Gauge Master** is required.

The **PoCo-Gauge** is screwed into the **PoCo-Gauge Master** and tightened with a specified torque. The marking lines indicate the actual state of the **PoCo-Gauge working gauge** and they must be between new condition (Go) and wear limit (No-Go).

In case of deviations, the **PoCo-Gauge** and **PoCo-Gauge Master** must be returned to EMUGE for inspection.

Markierungslinie im Neuzustand (Go)  
Marking line in new condition (Go)

Markierungslinie für die Verschleißgrenze (No-Go)  
Marking line for wear limit (No-Go)

## PoCo-Gauge 3D

**Spezial-Gewinde-Gut-Lehrdorn  
zur maschinellen Gewindeprüfung**
**Special thread plug gauge GO  
for inspection of thread position on measuring machine**

Zur Dokumentation und Qualitätsprüfung stellungsgebundener Gewinde erfolgt die Überprüfung auf 3D-Messmaschinen zusätzlich zur manuellen Methode.

For documentation and quality inspection purposes of threads with specified starting point, the tests are conducted on 3D measuring machines in addition to manual inspection.

**Kundennutzen**

- Gewindeprüfung mittels Spezial-Gewinde-Gut-Lehrdorn **PoCo-Gauge 3D**
- Flankendurchmesserunabhängiges Prüfen in der Messmaschine durch Abtasten der stellungsgebundenen Fläche
- Praxisnahe Prüfung der Gewindestellung zur Planfläche
- Auslieferung mit Prüfzertifikat, dadurch Einbindung in den kundenseitigen Zertifizierungszyklus möglich
- Fertigung nach kundenspezifischen Vorgaben

**Customer benefits**

- Thread position inspection with special thread plug gauge GO **PoCo-Gauge 3D**
- Inspection in measuring machine independent of pitch diameter thanks to scanning the surface with specified position
- Practical inspection of thread position relative to flat surface
- Delivered with inspection certificate, therefore integration into customer's certification cycle is possible
- Production according to customer-specific requirement

**Prüfvorgang**

Beim Prüfen in einer 3D-Messmaschine wird in jedes Zündkerzengewinde ein **PoCo-Gauge 3D** eingeschraubt und mit einem festgelegten Drehmoment (Empfehlung 5 Nm) angezogen. Die Messung der Winkellage findet im Brennbereich statt. Hierzu wird durch Abtasten der Orientierungsfläche der Stellungswinkel ermittelt.

**Inspection procedure**

During testing in a 3D measuring machine a **PoCo-Gauge 3D** is screwed into each spark plug thread and tightened with a specified torque (recommended 5 Nm). The angular position is measured in the combustion area. The positional angle is determined by scanning the orientation surface.

Orientierungsfläche (Tastfläche) zur Positionsbestimmung für Messtaster der 3D-Messmaschine  
Orientation surface (touch surface) to determine position for measuring probes of the 3D measuring machine

### PoCo-Bush

**Positions-Einstell-Hülse**  
zur Bestimmung der Winkellage des Werkzeuges

Position-setting bush  
to determine the angular position of the tool

Beim Gewindeschneiden und Gewindeformen ist das stellungsgebundene Ausrichten des Werkzeuges sehr aufwändig.

Einfacher und genauer geht es mit der Positions-Einstell-Hülse **PoCo-Bush**. Mit der **PoCo-Bush** ist die Winkellage der Werkzeuge zur Index-Kerbe „Deutsches Eck“ bei HSK-Schäften in wenigen Schritten in einem Voreinstellgerät bestimmbar. Die Werte aus dem Voreinstellgerät können anschließend direkt in die Maschinensteuerung eingegeben werden.

In Verbindung mit der speziellen Spannzangen-Aufnahme für Gewindewerkzeuge **PoCo-Synchro** (siehe Seite 604) ist eine Winkelgenauigkeit von kleiner 5° und damit eine stellungsgebundene Gewindefertigung möglich.

The correct positioning of tools is very time-consuming when cutting or cold-forming threads with specified start position.

The position-setting bush **PoCo-Bush** makes this an easy and accurate procedure. Thanks to the **PoCo-Bush** the angular position of tools relative to the index notch of HSK shanks can be determined in few steps with a presetting device. Afterwards the values of the presetting device can be entered directly into the machine control unit.

Together with the special collet holder for threading tools **PoCo-Synchro** (see page 604) the angle can be determined with an accuracy of smaller 5° and as a result the production of threads with specified start position is possible.

#### Kundennutzen

- Praxisnahe Ermittlung des Gewindestartpunktes
- Einfache Handhabung
- Kein aufwändiges Ausmessen der Gewindebohrer/-former
- Kein zusätzliches Markieren der Werkzeuge und Aufnahmen
- Bestimmung der Winkellage (C-Achse) ohne Eingreifen in das CNC-Programm nur über Werkzeug-Längenkorrektur möglich
- Werkzeugschonende Ausführung durch innenliegende Kunststoffhülse
- Mit integrierter Ratsche, dadurch kein zusätzlicher Drehmomentschlüssel notwendig
- Stellungsgebundene Ausrichtung ab dem ersten Gewinde

#### Customer benefits

- Practical determination of start position of thread
- Easy handling
- Eliminates time-consuming measuring of taps/cold-forming taps
- No additional marking of tools and holders necessary
- Angular position (C-axis) can be determined without modifying the CNC programme, only with length adjustment of tool
- Design with internal plastic sleeve avoids damage to the tool
- With integrated ratchet, therefore no additional torque wrench required
- Correct start position from the first thread

## Funktionsweise

## Functionality

Die **PoCo-Bush** wird mittels der angebrachten Ratsche auf einen bereits eingespannten Gewindebohrer bzw. Gewindeformer gegen den Anschlag verschraubt. Dadurch ist ein werkzeugschonendes Aufschrauben gewährleistet.

The **PoCo-Bush** is screwed onto a clamped tap or cold-forming tap using the attached ratchet until it reaches the end stop. This procedure ensures a screwing operation which reduces stress on the tools.

Aufschrauben mittels Ratsche  
Screw mounting with ratchet

Im Anschluss wird der Messzyklus des Voreinstellgerätes gestartet. Über die Axial- und Radialkugel wird die Winkellage (C-Achse) und das Längenmaß (Z-Achse) ermittelt. Die beschrifteten Korrekturwerte werden zur Winkellage bzw. zum Längenmaß addiert (beide im Zyklus enthalten) und ergeben die exakten Einstellwerte.

Afterwards the measuring cycle of the presetting device can be started. The angular position (C-axis) and length dimension (Z-axis) are determined by means of the axial and radial position balls. The marked corrected values are added to the angular position respectively to the length dimension (both included in the cycle) and result in the accurate setting values.

Diese beiden Werte (C-Achse und Z-Achse) werden anschließend in den Gewindeschneidzyklus in der Maschinensteuerung eingegeben. Alternativ ist die Eingabe der Winkellage (C-Achse) auch über das Längenkorrekturmaß möglich. Voraussetzung hierfür ist ein synchroner Gewindeschneidzyklus, welcher über die Winkellage startet.

Then, both data (C-axis and Z-axis) must be entered in the tapping cycle of the machine control unit. Alternatively, it is possible to enter the angular position (C-axis) via the length correction value. A precondition for that is a synchronous tapping cycle which is started via the angular position.

Die Winkellage kann im Anschluss mit den PoCoSys-Prüfsystemen an der Fertigungsmaschine oder in der 3D-Messmaschine überprüft werden.

And finally the angular position can be rechecked with the PoCoSys test systems on the production machine or on the 3D measuring machine.

Voreinstellgerät zur vollautomatischen Messung, inklusive automatischer Rotation  
Presetting device with automatic measuring, including rotation.

### Die Genauigkeit ist von folgenden Punkten abhängig:

- Genaue Synchronisierung von Maschine und Steuerung
- Exakte Planseitenbearbeitung (z.B. Plananlage der Zündkerze)
- Spannzangen-Aufnahme für Gewindewerkzeuge **PoCo-Synchro** (siehe Seite 604)
- Gewindebohrer bzw. Gewindeformer
- Positions-Einstell-Hülse **PoCo-Bush**
- Voreinstellgerät mit automatischer Rotation (empfohlen)

### The accuracy depends on the following conditions:

- Correct synchronisation of machine and control unit
- Accurate machining of face side (e.g. contact face of spark plug)
- Collet holder for threading tools **PoCo-Synchro** (see page 603)
- Tap respectively cold-forming tap
- Position-setting bush **PoCo-Bush**
- Presetting device with automatic rotation (recommended)

### PoCo-Synchro

**Spannzangen-Aufnahme für Gewindewerkzeuge mit eingegengter Mitnehmernut für höhere Winkelgenauigkeit**

**Collet holder for threading tools with a drive slot of tighter tolerance for improved angular accuracy**

Für eine exakte Werkzeugführung empfiehlt sich die Spannzangen-Aufnahme für Gewindewerkzeuge **PoCo-Synchro** mit Kegel-Hohlschaft HSK-T nach DIN 69893-7 bzw. ISO 12164-3.

Eine in der Toleranz eingegengte Mitnehmernut garantiert höchste Genauigkeiten bei der stellungsgebundenen Gewindeherstellung und reduziert die Positionsabweichung auf ein Minimum. Dadurch sind Winkelgenauigkeiten kleiner 5° möglich.

In order to optimise tool guidance it is recommended to use the collet holder for threading tools **PoCo-Synchro** with hollow taper shank HSK-T according to DIN 69893-7 respectively ISO 12164-3.

A drive slot with tighter tolerance guarantees the highest possible accuracy in the production of threads with specified start position and at the same time reduces any positional deviation to a minimum.

As a result, an angular accuracy smaller 5° is possible.

#### Kundennutzen

- Gleichbleibende Positionierung und Wiederholbarkeit durch eingegengte Mitnehmernut
- Platzsparende Spannmutter Hi-Q/ERMC mit ER-Spannzange und Dichtscheibe
- Modulare Bauweise, vorbereitet für IKZ- oder MMS-Längeneinstellschraube
- Mit innerer Kühlschmierstoff-Zufuhr (IKZ) bis 50 bar oder Minimalmengenschmierung (MMS/MQL) verwendbar

#### Customer benefits

- Consistent positioning and repeatability thanks to tighter tolerance of drive slot
- Space-saving collet Hi-Q/ERMC with ER collet and sealing disk
- Modular design, prepared for IKZ or MQL length adjustment screw
- For use with internal coolant supply (IKZ) up to 50 bar or minimum quantity lubrication (MQL)

Kalibrieren  
Calibration

EMUGE bietet Ihnen umfangreiche Leistungen zur Kalibrierung Ihrer Lehren und Messmittel durch unseren Kooperationspartner DECOM UGK GmbH, ein unabhängiges Kalibrierlabor, ansässig im Hause EMUGE. Die DECOM UGK GmbH ist ein seit 1998 DAkkS-akkreditiertes Prüflabor für Länge und weitere geometrische Größen (z.B. Gewindelehren, Messuhren, Feinzeiger, Fühlhebelmessgeräte, Bügelmessschrauben, Messschieber, usw.) gemäß EN/ISO/IEC 17025. Die messtechnische Ausstattung, das Personal und die Umgebungsbedingungen unterliegen der Überwachung durch die DAkkS (Deutsche Akkreditierungsstelle GmbH).

EMUGE offers you comprehensive services for the calibration of your gauges and measuring tools by our cooperation partner DECOM UGK GmbH, an independent calibration laboratory on the premises of EMUGE-Werk at Lauf. DECOM UGK GmbH has been a DAkkS-accredited calibration laboratory for length and other geometric quantities (e.g. thread gauges, dial gauges, dial gauge instruments, dial test indicators, micrometer gauges, caliper gauges etc.) acc. EN/ISO/IEC 17025 since 1998. The technical measuring equipment, the personnel and the environmental conditions are subject to surveillance by the DAkkS (German Accreditation Body).

[www.decom-ugk.de](http://www.decom-ugk.de)

## Gerätetechnische Ausstattung

### Bezugsnormale und Normalmesseinrichtungen:

Für sämtliche im Kundenauftrag durchgeführten Messungen wird der Anschluss an nationale und internationale Normale sichergestellt. Dazu werden Normale und Normalmesseinrichtungen bereitgehalten, die in regelmäßigen Abständen durch innerhalb der WECC anerkannte Kalibrierstellen rekaliert werden.

### Rückführbarkeit der Messgeräte auf nationale Normale

Für die Durchführung der Prüfmittelüberwachung von Betriebsmitteln steht ein umfangreicher Gerätepark zu Verfügung. Die Messgeräte und Messeinrichtungen werden durch regelmäßige externe sowie interne Kalibrierung unter Verwendung der Bezugsnormale und Normalmesseinrichtungen an nationale Normale angeschlossen.

## Technical Equipment

### Reference Standards and Standard Measuring Devices:

The compliance with national and international standards of all measurements commissioned by customers is guaranteed. All necessary standards and standard measuring devices are at our disposal and are regularly recalibrated by calibration laboratories authorised by the WECC.

### Traceability of measuring devices to national standards.

An extensive range of equipment is available to conduct inspection monitoring of operating equipment. The measuring devices and measuring equipment are certified to be in compliance with national standards by means of regular external calibrations as well as in-house calibrations using reference standards and standard measuring devices.

Als Ansprechpartner dient Ihnen die gesamte Vertriebsorganisation des Firmenverbundes EMUGE-FRANKEN ([www.emuge-franken.com/vertrieb](http://www.emuge-franken.com/vertrieb)).

For more information please contact the sales organisation of the company association EMUGE-FRANKEN ([www.emuge-franken.com/sales](http://www.emuge-franken.com/sales)).

## Akkreditierung

Die Deutsche Akkreditierungsstelle bestätigt mit dieser **Akkreditierungsurkunde**, dass das Kalibrierlaboratorium

**DECOM-UGK Werkzeugtechnik GmbH**  
**Nürnberger Straße 96 – 100, 91207 Lauf a. d. Pegnitz**

die Mindestanforderungen gemäß DIN EN ISO/IEC 17025:2018 für die in der Anlage zu dieser Urkunde aufgeführten Konformitätsbewertungstätigkeiten erfüllt.  
Dies schließt zusätzliche bestehende gesetzliche und normative Anforderungen ein, einschließlich solcher in relevanten sektoralen Programmen.

Die Anforderungen an das Managementsystem in der DIN EN ISO/IEC 17025 sind in einer für Kalibrierlaboratorien relevanten Sprache verfasst und stehen insgesamt in Übereinstimmung mit den Prinzipien der DIN EN ISO 9001.

Diese Akkreditierung wurde gemäß Art. 5 Abs. 1 Satz 2 VO (EG) 765/2008, nach Durchführung eines Akkreditierungsverfahrens unter Beachtung der Mindestanforderungen der DIN EN ISO/IEC 17011 und auf Grundlage einer Bewertung und Entscheidung durch den eingesetzten Akkreditierungsausschuss ausgestellt.

Diese Akkreditierungsurkunde gilt nur in Verbindung mit dem Bescheid vom 30.12.2022 mit der Akkreditierungsnummer D-K-17567-01.  
Sie besteht aus diesem Deckblatt, der Rückseite des Deckblatts und der folgenden Anlage mit insgesamt 3 Seiten.

Registrierungsnummer der Akkreditierungsurkunde: D-K-17567-01-00

Berlin, 30.12.2022 Im Auftrag Dr. Florian Witt  
Fachbereichsleitung

Diese Urkunde gibt den Stand zum Zeitpunkt des Ausstellungsdatums wieder. Der jeweils aktuelle Stand der gültigen und überwachten Akkreditierung ist der Datenbank akkreditierter Stellen der Deutschen Akkreditierungsstelle zu entnehmen ([www.dakks.de](http://www.dakks.de)).

Siehe Hinweise auf der Rückseite

Seite 3 von 3

### Überwachungsprüfung nach VDI/VDE/DGQ-Richtlinie 2618, Blatt 4.8 „Ü“

- Reinigen
- Entmagnetisieren
- Sichtprüfung auf Beschädigung
- Nacharbeit leichter Beschädigungen mit Ölstein oder Läppleinen
- Kennzeichnung feststellen, evtl. Ident-Nummer festlegen und aufbringen
- Temperieren (min. 5 Stunden)
- Sichtprüfung der korrekten Kennzeichnung, ggf. Farbkennzeichnung
- Kennwertermittlung: Flankendurchmesser am Gewindeanfang an 2 Messstellen um 90° versetzt
- Auswertung der Messergebnisse und Erstellung des Kalibrierscheines
- Konservierung und Stückverpackung

Alle erforderlichen Daten und Messergebnisse werden in einem Kalibrierschein (siehe Muster) dokumentiert.

### Inspection monitoring according to VDI/VDE/DGQ-directive 2618, sheet 4.8 “Ü”

- Cleaning
- Demagnetizing
- Visual inspection for damage
- Rework of minor damages with oil stone and lapping cloth
- Determine marking, if applicable, establish ID number and apply marking
- Tempering (min. 5 hours)
- Visual inspection for correct marking, if applicable colour marking.
- Determination of specific values: pitch diameter at the start of the thread on 2 measuring locations off-set by 90°.
- Evaluation of measuring results and creation of calibration certificate
- Preservation and single packaging

All necessary data and measuring results will be documented in a calibration certificate (see sample).

Gegenstand  
Object: Gewinde-Grenzlehrdorn

Hersteller  
Manufacturer: EMUGE

Type  
Type: M 18x2.5-6H

Fabrikat-/Serien-Nr.  
Serial Number: 0916

Auftraggeber  
Customer: Musterkunde  
Musterstraße 10  
9999 Musterstadt

Auftragsnummer  
Work order No.: 123456789

Anzahl der Seiten des Kalibrierscheines  
Number of pages of the certificate: 2

Datum der Kalibrierung  
Date of calibration: 31.01.2018

Prüfer  
Inspector: S. Göbel

Dieser Kalibrierschein darf nur vollständig und unverändert weiterverbreitet werden. Auszüge oder Änderungen bedürfen der Genehmigung der ausstellenden Firma. Dieser Kalibrierschein wurde per EDV erstellt und ist ohne Unterschrift gültig.

| Die Messmittel werden nach Anlieferung sichtkontrolliert, gereinigt, falls erforderlich entmagnetisiert und entsprechend der VDI/DKD-Richtlinien bei 20 °C ± 1 °C mindestens 5 Stunden temperiert. Alle Messmittel müssen mit einer eindeutigen Ident-Nr. gekennzeichnet sein, um die Kalibrierscheinzuordnung zu gewährleisten. Ist keine entsprechende Kennzeichnung auf dem Messmittel, wird bei der Kalibrierung die Ident-Nr. mittels eines Aufklebers angebracht. Gegen einen Aufpreis nehmen wir auch eine feste Kennzeichnung Ihrer Prüfmittel vor. |    | The measuring devices are visually checked after receipt, cleaned, if necessary demagnetised and tempered acc. to the VDI/DKD guidelines at 20 °C ± 1 °C for at least 5 hours. All measurement devices must be marked with a unique identification number in order to guarantee the clear allocation to its calibration certificate. If there is no corresponding marking on the measuring instrument, the identification number will be attached by means of a sticker during calibration. For a surcharge, we can also provide a permanent identification marking on your testing devices. | BSW                        |

| Die Kalibrierung der Messmittel erfolgt nach VDI/VDE/DGQ-Richtlinie 2618 ff. „Ü“ (Überwachungsprüfung). Messmittel, welche nicht den Spezifikationen entsprechen, werden mit einem „gesperrt“-Aufkleber versehen. Prüfplaketten werden auf Wunsch angebracht. Messmittelstammdaten und Kalibrierscheine werden auch in unserer Online-Datenbank abgelegt (Kalibrierscheinmuster siehe auch Seite 608).                                                                                                                                                      |  | The calibration of the measuring equipment is carried out according to VDI/VDE/DGQ guideline 2618 et seq. “Ü” (monitoring inspection). Measuring equipment that does not meet the specifications will be marked with a “blocked” sticker. Inspection stickers can be attached free of charge on request. Master data of measuring devices and calibration certificates are also stored in our online database (sample of calibration certificate see page 608).                                                                                                                              | PoCoSys                    |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Kalibrieren<br>Calibration |

| Die kalibrierten Messmittel werden durch Einölen oder mittels Vaseline konserviert und sachgemäß verpackt bzw. in Schmelzmasse getaucht. Die stoßgeschützte Verpackung erfolgt direkt im Versandraum des Kalibrierlabors. Kalibrierscheine können in Papierform, als PDF per E-Mail oder direkt online über KalimeroNet zur Verfügung gestellt werden.                                                                                                                                                                                                      |  | The calibrated measuring devices are preserved with oil or petroleum jelly and properly packaged respectively treated in a hot-dip procedure. The measuring devices are packaged shock-proof directly in the shipment preparation room of the calibration laboratory. Calibration certificates can be provided on paper, as PDF file by e-mail or directly online via KalimeroNet.                                                                                                                                                                                                           |                            |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                            |

## KalimeroNet – einfachste Bedienung – Kalibrierscheine weltweit online verfügbar – keine Software-Installation

Welche Funktionen beinhaltet KalimeroNet?

- Kalibrierscheine sind direkt abrufbar und als PDF hinterlegt
- Erfassung eigener Kundenbasisdaten wie Standorte und Lagerorte
- Prüf- und Kalibrieranweisungen können als Dateianhang verwaltet werden und lassen sich dem Prüfmittel zuordnen
- Zugriff auf alle bisherigen Kalibrierungen in der Historienübersicht
- Datenexport in Microsoft® Excel® für eigene Ausdrücke
- Umfangreiche Sortier- und Filterfunktionen verschaffen den gewünschten Überblick wie z.B. Prüffälligkeiten
- Verwaltung eigenkalibrierter Messmittel mit Kalibrierschein als Dateianhang möglich
- Vergabe von Nutzerprofilen durch DECOM UGK ist möglich

## Wie kann ich die Leistungen von KalimeroNet nutzen?

Sie benötigen einen Internetzugang. Die Nutzung von KalimeroNet über unser Kundenportal steht ausschließlich DECOM UGK Kunden zur Verfügung. Die Nutzung ist unentgeltlich.

## Wie bekomme ich meine persönlichen Daten für die Kundenportal-Registrierung?

Sie müssen sich einmalig über das Online-Formular mit Ihren Anmeldedaten registrieren. Das Passwort kann nachträglich von Ihnen geändert werden.

Unter [www.decom-ugk.de/user/login](http://www.decom-ugk.de/user/login) können Sie sich über unseren Gastzugang von der einfachen Bedienung überzeugen. Alternativ können Sie eine Kurzbeschreibung zu KalimeroNet von unserer Internetseite unter [www.decom-ugk.de/hp/download](http://www.decom-ugk.de/hp/download) herunterladen.

## KalimeroNet – easiest handling – calibration sheets available online worldwide – no software installation necessary

Which functions does KalimeroNet offer you?

- Calibration sheets can be called off directly, and are filed in PDF format
- Registration of proper customer data, like location and storage location is possible
- Inspection and calibration instructions can be administrated as file attachments, and allocated to individual inspection tools
- Access to all past calibrations in the history file
- Data export in Microsoft® Excel® for your own printout
- Comprehensive sorting and filter functions provide full control, e.g. of due inspection dates
- Administration of self-calibrated measuring tools with calibration sheet as file attachment is possible
- User profiles can be provided by DECOM UGK

## How can I use the advantages of KalimeroNet?

All you need is an Internet access. The use of KalimeroNet through our customer portal is available only to DECOM UGK customers. The use of KalimeroNet is free of charge.

## How do I get my personal data for registration in the customer portal?

You have to register one time only through our online form with your customer data. You can change your password subsequently. Under our guest log-in, [www.decom-ugk.de/user/login](http://www.decom-ugk.de/user/login) you can convince yourself of the easy handling of KalimeroNet. As an alternative, you can download a brief description of KalimeroNet from our Internet website under [www.decom-ugk.de/hp/download](http://www.decom-ugk.de/hp/download).
