1) Gewindebohren in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Threading in through holes is possible only with external cooling/lubrication

2) Achtung: KHM-Rekord 2A-HCUT/D-IKZ-TICN als Vorschneider verwenden!  
Please note: Use solid carbide tap KHM-Rekord 2A-HCUT/D-IKZ-TICN as No.1 tap!

Spiralbohrer Typ EF-Drill-HCUT  
siehe Seite 62

Twist drills type EF-Drill-HCUT,

A technical cross-sectional diagram of a tapered roller bearing. It shows an outer ring with a tapered outer race, an inner ring with a tapered inner race, and several tapered rollers arranged between them. The rollers are wider at the ends and taper towards the center. The entire assembly is shown within a housing, with a dashed line indicating the axis of rotation.

1) Gewindebohren in Durchgangslöchern nur mit externer Kühlschmierung möglich  
Threading in through holes is possible only with external cooling/lubrication

Zum Spannen von Gewindebohrern für die Herstellung großer Gewinde empfehlen wir die Verwendung von Aufnahmen der Typenreihen Softsynchro® und HF. Diese finden Sie auf den Seiten 620 - 621, 629 - 630 und 709 - 715.

For the clamping of taps for the production of large threads, we recommend using our holders of the Softsynchro® and HF series. You will find these on pages 620 - 621, 629 - 630 and 709 - 715.

1) Bevorzugt mit Pastenschmierung einsetzen, neben Werkzeug auch Bohrungswandung einstreichen.  
Ölschmierung ist nur bei senkrechter Grundlochbearbeitung möglich, wenn das Grundloch mit Öl vollgefüllt ist.  
If possible, use paste lubrication, coating both the tool and the walls of the drilled hole.  
Lubrication with oil is possible only in the vertical machining of blind holes, if the hole is entirely filled with oil.

1) Der Vorschneider Nr.1Z mit Führungszapfen ist eine zusätzliche Hilfe zum winkelrechten Anschneiden von Hand.  
Er kann z.B. auf der Maschine weggelassen werden. Die Profilabstufung von Nr.1Z und Nr.1 ist gleich.  
The taper tap No. 1Z with cylindrical pilot is an additional aid for true alignment especially when tapping by hand.  
It can be deleted when tapping by machine. The profile graduation of No.1Z, and No.1 is the same.

1) Der Vorschneider Nr.1Z mit Führungszapfen ist eine zusätzliche Hilfe zum winkelrechten Anschneiden von Hand.  
Er kann z.B. auf der Maschine weggelassen werden. Die Profilabstufung von Nr.1Z und Nr.1 ist gleich.  
The taper tap No. 1Z with cylindrical pilot is an additional aid for true alignment especially when tapping by hand.  
It can be deleted when tapping by machine. The profile graduation of No.1Z, and No.1 is the same.

1) Der Vorschneider Nr.1Z mit Führungszapfen ist eine zusätzliche Hilfe zum winkelrechten Anschneiden von Hand.  
Er kann z.B. auf der Maschine weggelassen werden. Die Profilabstufung von Nr.1Z und Nr.1 ist gleich.  
The taper tap No. 1Z with cylindrical pilot is an additional aid for true alignment especially when tapping by hand.  
It can be deleted when tapping by machine. The profile graduation of No.1Z, and No.1 is the same.

1) Gewindebohren in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Threading in through holes is possible only with external cooling/lubrication

- 1) Bevorzugt mit Pastenschmierung einsetzen, neben Werkzeug auch Bohrungswandung einstreichen.  
Ölschmierung ist nur bei senkrechter Grundlochsbearbeitung möglich, wenn das Grundloch mit Öl vollgefüllt ist.  
If possible, use paste lubrication, coating both the tool and the walls of the drilled hole.  
Lubrication with oil is possible only in the vertical machining of blind holes, if the hole is entirely filled with oil.

- 1) Bevorzugt mit Pastenschmierung einsetzen, neben Werkzeug auch Bohrungswandung einstreichen.  
Ölschmierung ist nur bei senkrechter Grundlochsbearbeitung möglich, wenn das Grundloch mit Öl vollgefüllt ist.  
If possible, use paste lubrication, coating both the tool and the walls of the drilled hole.  
Lubrication with oil is possible only in the vertical machining of blind holes, if the hole is entirely filled with oil.

1) Der Vorschneider Nr.1Z mit Führungszapfen ist eine zusätzliche Hilfe zum winkelrechten Anschneiden von Hand. Er kann z.B. auf der Maschine weggelassen werden. Die Profilabstufung von Nr.1Z und Nr.1 ist gleich.  
The taper tap No. 1Z with cylindrical pilot is an additional aid for true alignment especially when tapping by hand. It can be deleted when tapping by machine. The profile graduation of No.1Z, and No.1 is the same.

- 1) Der Vorschneider Nr.1Z mit Führungszapfen ist eine zusätzliche Hilfe zum winkelrechten Anschneiden von Hand. Er kann z.B. auf der Maschine weggelassen werden. Die Profilabstufung von Nr.1Z und Nr.1 ist gleich.  
The taper tap No. 1Z with cylindrical pilot is an additional aid for true alignment especially when tapping by hand. It can be deleted when tapping by machine. The profile graduation of No.1Z, and No.1 is the same.

 1) Der Vorschneider Nr.1Z mit Führungszapfen ist eine zusätzliche Hilfe zum winkelrechten Anschneiden von Hand. Er kann z.B. auf der Maschine weggelassen werden. Die Profilabstufung von Nr.1Z und Nr.1 ist gleich.  
 The taper tap No. 1Z with cylindrical pilot is an additional aid for true alignment especially when tapping by hand. It can be deleted when tapping by machine. The profile graduation of No.1Z, and No.1 is the same.

|                                                                                                                                                                                                                        |                                                                                                                                                                                                                        |  |           |

ANSI/ASME B1.20.1

a) Zylindrisch vorarbeiten  
Cylindrical preparation of thread hole

b) Kegelig vorarbeiten  
Tapered preparation of thread hole

1) Die Vorbohrtiefe  $t_1$  berücksichtigt die Längen  $L_1$  und  $L_3$  nach ASME-Norm, sowie die Anschnittlänge des Gewindebohrers und 1 bis 2 Gewindegänge Sicherheit.  
Tiefbohren ist erforderlich, wenn Gewindebohrer mit Maximal-Gewindelängen nach ASME B94.9 angewendet werden sollen.  
The drill depth  $t_1$  takes into account the lengths  $L_1$  and  $L_3$  acc. ASME standards, the chamfer length of the tap and 1-2 threads safety margin.  
Deep drilling is necessary whenever taps with maximum thread length acc. ASME B94.9 are to be used.

c) Vorarbeiten von Grundlöchern  
Preparation of blind holes

2) Die Kernlochmaße sind auf Minimallängen nach ASME-Norm aufgebaut. Für Grundlöcher, welche die angegebenen Mindestdiefen  $t$  nicht zulassen, sind Sondergewindebohrer erforderlich. Eine bemaßte Grundlochskeze ist zur Beurteilung notwendig.  
The thread hole dimensions are based on minimal lengths acc. ASME standards. For blind holes which do not permit the indicated minimal depth  $t$ , special taps are necessary. A thread hole sketch with full dimensional specifications is necessary for making a decision.

EMUGE NPT-Gewindebohrer sind für die Lochformen a) bis c) geeignet.  
Für Gewinde mit höheren Anforderungen, z.B. NPT-Gewinde für die Luftfahrt, empfehlen wir, das Kernloch nach Form b) bzw. c) auszuführen.

EMUGE NPT taps are suited for the hole forms a) to c).  
For threads with higher demands, e.g. NPT threads for the aircraft industry, we recommend preparing the thread hole to form b), resp. c).

ANSI B1.20.3

a) Zylindrisch vorarbeiten  
Cylindrical preparation of thread hole

b) Kegelig vorarbeiten  
Tapered preparation of thread hole

1) Die Vorbohrtiefe  $t_1$  berücksichtigt die Längen  $L_1$  und  $L_3$  nach ASME-Norm, sowie die Anschnittlänge des Gewindebohrers und 1 bis 2 Gewindegänge Sicherheit.  
Tiefbohren ist erforderlich, wenn Gewindebohrer mit Maximal-Gewindelängen nach ASME B94.9 angewendet werden sollen.  
The drill depth  $t_1$  takes into account the lengths  $L_1$  and  $L_3$  acc. ASME standards, the chamfer length of the tap and 1-2 threads safety margin.  
Deep drilling is necessary whenever taps with maximum thread length acc. ASME B94.9 are to be used.

c) Vorarbeiten von Grundlöchern  
Preparation of blind holes

2) Die Kernlochmaße sind auf Minimallängen nach ASME-Norm aufgebaut. Für Grundlöcher, welche die angegebenen Mindesttiefen  $t$  nicht zulassen, sind Sondergewindebohrer erforderlich. Eine bemaßte Grundlochskizze ist zur Beurteilung notwendig.  
The thread hole dimensions are based on minimal lengths acc. ASME standards. For blind holes which do not permit the indicated minimal depth  $t$ , special taps are necessary. A thread hole sketch with full dimensional specifications is necessary for making a decision.

EMUGE NPTF-Gewindebohrer sind für die Lochformen a) bis c) geeignet.  
Für Gewinde mit höheren Anforderungen, z.B. NPTF-Gewinde für die Luftfahrt, empfehlen wir, das Kernloch nach Form b) bzw. c) auszuführen.

EMUGE NPTF taps are suited for the hole forms a) to c).  
For threads with higher demands, e.g. NPTF threads for the aircraft industry, we recommend preparing the thread hole to form b), resp. c).

**Rc (BSPT)**

DIN EN 10226-2, ISO 7-1

## a) Zylindrisch vorarbeiten

Cylindrical preparation of thread hole

## b) Kegelig vorarbeiten

Tapered preparation of thread hole

## c) Vorarbeiten von Grundlöchern

Preparation of blind holes

2) Für Grundlöcher, welche die angegebenen Mindestdiefen  $t$  nicht zulassen, sind Sondergewindebohrer erforderlich.

Eine bemaßte Grundlochskizze ist zur Beurteilung notwendig.

For blind holes which do not permit the indicated minimal depth  $t$ , special taps are necessary.

A thread hole sketch with full dimensional specifications is necessary for making a decision.

EMUGE Rc-Gewindebohrer sind für die Lochformen a) bis c) geeignet. Die Lochform a) kann angewendet werden, wenn keine Dichtprobleme zu befürchten sind.

EMUGE Rc taps are suited for the hole forms a) to c).

Hole type a) can be used when there is no reason to worry about sealing problems.

Quick-change tap holders of our  
SFM series, see page 699 - 704

A diagram showing a cross-section of a V-shaped groove. The angle between the two sloped sides is labeled as  $55^\circ$ . The width of the groove at a certain depth is labeled as  $P$ .

$$b_2 \approx 10 \times P$$
 $\max. 2,5 \times d_1$

<sup>2)</sup> Bei entsprechender Einspannlänge bis ca. 2,5 x d<sub>1</sub>  
With sufficient clamping length up to approx. 2.5 x d<sub>1</sub>

<sup>3)</sup> Muss mit zwangsläufiger Steigung geschnitten werden  
Positive feed control is necessary

### Gewindeschneidöle und -pasten

Mit seinen chlorfreien Gewindeschneidölen und -pasten erbringt EMUGE-FRANKEN einen weiteren Beitrag zum Thema Umweltschutz.

Die Kühlschmierstoffe sind überwiegend kennzeichnungsfrei und erfüllen alle Anforderungen der aktuellen EU-Verordnung zur Registrierung, Bewertung, Zulassung und Beschränkung chemischer Stoffe (REACH).

Besondere Bedeutung sollte bei der Herstellung von Gewinden dem Kühlschmierstoff zugeordnet werden. EMUGE-Kühlschmierstoffe sind speziell auf den zu bearbeitenden Werkstoff bzw. auf die vorhandenen Arbeitsbedingungen abgestimmt.

### Thread cutting oils and pastes

EMUGE-FRANKEN makes another contribution to the protection of the environment with its chlorine-free cutting oils and pastes.

Most coolant-lubricants do not require a hazard classification and meet all the requirements of the current EU Regulation concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH).

In the production of threads, special attention should always be paid to the use of coolant-lubricant. EMUGE coolant-lubricants are specially designed for the materials they are recommended for, and for typical modern work conditions as known from our experience.

|                                                                                     |                                              | Gewindeschneidöle, chlorfrei                                                                                                                                                                                            | Thread cutting oils, chlorine-free                                                                                                                                                                             |

Weitere Ausführungen auf Anfrage  
Further designs upon request

Ersatz-Spannkappen oder Sechskant-Spannkappen auf Anfrage  
Spare clamping nuts or hexagon clamping nuts are available upon request

Kurze Ausführung, mit innerer Kühlschmierstoff-Zufuhr  
Short design, with internal coolant supply

$p_{max}$   
50 bar  
(700 psi)

Für den Einsatz auf CNC-  
Maschinen und herkömmlichen  
Gewindeschneideinrichtungen

For use on CNC machines  
and conventional thread  
cutting machinery

Lange Ausführung, mit innerer Kühlschmierstoff-Zufuhr  
Long design, with internal coolant supply

$p_{max}$   
50 bar  
(700 psi)

Für den Einsatz auf CNC-  
Maschinen und herkömmlichen  
Gewindeschneideinrichtungen

For use on CNC machines  
and conventional thread  
cutting machinery

### Cut&Form – Innengewindefertigung durch Kombination von Spanen und Umformen

Das Innengewinde-Fertigungssystem Cut&Form ist eine Kombination aus spanenden und umformenden Verfahren, welche jeweils einen bestimmten Teil des Gewindeprofils erzeugen.

### Cut&Form – Production of internal threads by a combination of machining and cold forming

The internal thread production system Cut&Form is a combination of machining and cold-forming processes which each produce a specific part of the thread profile.

#### Vorteile

- Verfestigung des Gewindes und Erhöhung der Dauerfestigkeit
- Gewindeformen von großen Gewindesteigungen
- Gewindeformen von schlecht fließenden Werkstoffen
- Erzeugung eines eng tolerierten Innengewindekerndurchmessers ohne „Kralle“
- Glättung der Gewindeoberfläche

#### Advantages

- Strengthened threads and increased long-term resistance
- Cold forming of large threads with coarse pitch
- Cold forming of threads in difficult materials
- Production of a narrow-tolerance minor diameter without space pocket
- Extra smooth thread surfaces

# Einsatzempfehlungen und Schnittwerte

## Bitte beachten:

Die in den jeweiligen Spalten angegebenen Umfangsgeschwindigkeiten (V<sub>c</sub> in m/min) sind Richtwerte, welche je nach Einsatzbedingungen (Material, Schmierung, Maschine, usw.) angepasst werden müssen.

Die empfohlenen Umfangsgeschwindigkeiten sind bezogen auf einen Gewinde- Nenndurchmesser von 10 mm.

 = DIN-Form / Gänge (Anformkegellänge)

# Application recommendation and cutting data

## Please note:

The circumferential speeds (V<sub>c</sub> in m/min) listed in the respective columns are standard values which have to be adjusted to individual work conditions (material, lubrication, machine etc.).

The recommended circumferential speeds are related to a nominal thread diameter of 10 mm.

 = DIN form / threads (lead taper length)

Internationaler Werkstoffvergleich siehe Seite 764 - 785

International comparison of materials, see page 764 - 785

## Gewindekernloch-Vorfertigungsdurchmesser für Gewindeformer

Die empfohlenen Vorfertigungsdurchmesser ermöglichen einen ausgeformten Kerndurchmesser innerhalb der Toleranz (bei M und MF nach DIN 13-50). Voraussetzung ist stabile Werkzeug- und Werkstückspannung sowie Verwendung von neuwertigen VHM-Spiralbohrern.

Zur Standzeitorientierung kann auch mit größeren Vorfertigungsdurchmessern gearbeitet werden. Es muss jedoch sichergestellt sein, dass die Kerndurchmesser-Toleranz eingehalten wird (bei M und MF nach DIN 13-50).

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei  $P \geq 1$  mm bzw. 24 Gg./1" um 0,05 mm kleiner vorzubohren.

Die empfohlenen Vorfertigungsdurchmesser sind sorgfältig ermittelt und in der Praxis geprüft. In seltenen Fällen kann es vorkommen, dass die empfohlenen Vorfertigungsdurchmesser nicht zum gewünschten Innengewinde-Kerndurchmesser führen. In diesen Fällen sind die geeigneten Vorfertigungsdurchmesser im Versuch zu ermitteln.

## Thread hole preparatory diameter for cold-forming taps

The recommended preparatory diameters enable a cold-formed minor diameter of the thread within tolerance (for M and MF according to DIN 13-50). Preconditions include a stable clamping of tool and workpiece as well as solid carbide twist drills which are new or as good as new.

In order to optimise tool life, larger thread hole preparatory diameters may be used. But it is necessary to ensure that the minor diameter of the thread complies with the tolerance (for M and MF according to DIN 13-50).

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for  $P \geq 1$  mm respectively from 24 threads/1".

The recommended preparatory diameters were carefully determined and tested in the field. In rare cases it may happen that the recommended preparatory diameters do not provide the desired minor diameter of the internal thread. In such cases the suitable preparatory diameters must be determined in tests.

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei P ≥ 1 mm um 0,05 mm kleiner vorzubohren.

Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for P ≥ 1 mm.

For further information regarding the recommended preparatory diameters, see page 317.

\*) ≤ M1,4 Tol. 4HX/5HX

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei  $P \geq 1$  mm um 0,05 mm kleiner vorzubohren.

Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for  $P \geq 1$  mm.

For further information regarding the recommended preparatory diameters, see page 317.

1) Gewindeformen in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Cold-forming in through holes is possible only with external cooling/lubrication

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei P ≥ 1 mm um 0,05 mm kleiner vorzubohren.  
Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for P ≥ 1 mm.  
For further information regarding the recommended preparatory diameters, see page 317.

1) Gewindeformen in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Cold-forming in through holes is possible only with external cooling/lubrication

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei P ≥ 1 mm um 0,05 mm kleiner vorzubohren.  
Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for P ≥ 1 mm.  
For further information regarding the recommended preparatory diameters, see page 317.

1) Gewindeformen in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Cold-forming in through holes is possible only with external cooling/lubrication

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei P ≥ 1 mm um 0,05 mm kleiner vorzubohren.  
Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for P ≥ 1 mm.  
For further information regarding the recommended preparatory diameters, see page 317.

| DIN 2174              |         |       |       |                 |           |       |  |                         |                            |                                       |                                           |

1) Gewindeformen in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Cold-forming in through holes is possible only with external cooling/lubrication

2) Zum Patent angemeldet  
Patent pending

P 2.1-5.1

P 2.1-5.1

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei  $P \geq 1$  mm um 0,05 mm kleiner vorzubohren.  
Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for  $P \geq 1$  mm.

For further information regarding the recommended preparatory diameters, see page 317.

1) Gewindeformen in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Cold-forming in through holes is possible only with external cooling/lubrication

2) Zum Patent angemeldet  
Patent pending

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei P ≥ 1 mm um 0,05 mm kleiner vorzubohren.  
Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for P ≥ 1 mm.  
For further information regarding the recommended preparatory diameters, see page 317.

| DIN 2174 |                        |         |                |                |                  |      |       | 324                                  | 324                               | 325                                   |

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei P ≥ 1 mm um 0,05 mm kleiner vorzubohren.

Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for P ≥ 1 mm.

For further information regarding the recommended preparatory diameters, see page 317.

1) Gewindeformen in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Cold-forming in through holes is possible only with external cooling/lubrication

2) Zum Patent angemeldet  
Patent pending

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei P ≥ 1 mm um 0,05 mm kleiner vorzubohren.  
Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for P ≥ 1 mm.

For further information regarding the recommended preparatory diameters, see page 317.

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei  $P \geq 1$  mm um 0,05 mm kleiner vorzubohren.

Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for  $P \geq 1$  mm.

For further information regarding the recommended preparatory diameters, see page 317.

» 334

» 334

1) Gewindeformen in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Cold-forming in through holes is possible only with external cooling/lubrication

2) Zum Patent angemeldet  
Patent pending

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei  $P \geq 1$  mm um 0,05 mm kleiner vorzubohren.

Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for  $P \geq 1$  mm.

For further information regarding the recommended preparatory diameters, see page 317.

1) Gewindeformen in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Cold-forming in through holes is possible only with external cooling/lubrication

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei  $P \geq 1$  mm um 0,05 mm kleiner vorzubohren.  
Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for  $P \geq 1$  mm.  
For further information regarding the recommended preparatory diameters, see page 317.

1) Gewindeformen in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Cold-forming in through holes is possible only with external cooling/lubrication

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei  $P \geq 1$  mm um 0,05 mm kleiner vorzubohren.

Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for  $P \geq 1$  mm.

For further information regarding the recommended preparatory diameters, see page 317.

1) Gewindeformen in Durchgangslöcher nur mit externer Kühlschmierung möglich  
Cold-forming in through holes is possible only with external cooling/lubrication

SELF-LOCK

Bei schlecht ausformenden Werkstoffen (z.B. GAL) empfehlen wir bei P = 24 Gg./1" und gröber um 0,05 mm kleiner vorzubohren.

Weitere Informationen zu den empfohlenen Vorfertigungsdurchmessern siehe Seite 317.

We recommend a smaller preparatory diameter by 0.05 mm for difficult to form materials (such as aluminium cast alloys) for P = 24 threads/1" and coarser threads.
