## Typenreihe Softsynchro® Softsynchro® Series

### Einsatz auf Maschinen mit Synchronspindel

Das Gewindewerkzeug wird durch die Synchronspindel steigungsgeführt, eventuell auftretende Axialkräfte durch Synchronisationsfehler werden durch einen Minimallängenausgleich auf Zug und Druck minimiert.

### Application on machines with synchronous spindle

The threading tool is pitch-controlled by the synchronous spindle; eventually arising axial forces caused by synchronisation faults are minimised by a minimum length compensation on tension and on compression.

# Softsynchro®

## HSK-A

DIN 69893-1

**Einsatz auf Maschinen mit Synchronspindel**

For use on machines with synchronous spindle

Weitere Ausführungen auf Anfrage  
Further designs upon request

Spannmutter für Dichtscheiben und Längeneinstellschraube sind im Lieferumfang enthalten  
Clamping nut for sealing disks and length adjustment screw are included in the delivery

## Zubehör

## Accessories

Spannzangen Typ ER (GB)  
Collets type ER (GB)

» 746 - 747

Dichtscheiben Typ DS/ER und Kühlschleiben Typ KS/ER  
Sealing disks type DS/ER and coolant flush disks type KS/ER

» 750

Längeneinstellschrauben  
Length adjustment screws

» 744

Spannschlüsselsatz  
Set of clamping wrenches

» 758

Montagevorrichtung  
Assembly device

» 756

Drehmomentschlüssel  
Torque wrenches

» 759

# Softsynchro® Slim/IKZ

## HSK-A

### DIN 69893-1

$p_{max}$   
50 bar  
(700 psi)

T C  
Soft

**Einsatz auf Maschinen mit Synchronspindel**

For use on machines with synchronous spindle

### Softsynchro® 0

Spannmutter ohne integrierte Abdichtung ist im Lieferumfang enthalten  
Clamping nut without integrated seal is included in the delivery

### Softsynchro® 1

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

### Zubehör

#### Accessories

Spannzangen Typ ER (GB)  
Collets type ER (GB)

» 746 - 747

Dichtscheiben Typ DS/ER und  
Kühlscheiben Typ KS/ER  
Sealing disks type DS/ER and  
coolant flush disks type KS/ER

» 750

Spannmutter mit integrierter  
Abdichtung Typ Hi-Q/ERM 11  
Clamping nut with integrated seal,  
type Hi-Q/ERM 11

» 752

Kühlschmierstoffrohre und Schlüssel  
Coolant tubes and wrenches

» 742 - 743

Spannschlüsselsatz  
Set of clamping wrenches

» 758

Montagevorrichtung  
Assembly device

» 756

Drehmomentschlüssel  
Torque wrenches

» 759

## Typenreihe Speedsynchro® Speedsynchro® Series

### Softsynchro®-Technologie mit Übersetzungsgetriebe

Die Typenreihe Speedsynchro® verfügt über ein integriertes Übersetzungsgetriebe mit einem Übersetzungsverhältnis von 1 : 4,412 und ist mit der Softsynchro®-Minimallängenausgleichsfunktion kombiniert.

Für eine hohe Werkzeugdrehzahl bei niedriger Spindeldrehzahl zur Taktzeiteinsparung, Energieeinsparung, Axialkraftreduzierung und Erhöhung der Wirtschaftlichkeit.

### Softsynchro® technology with transmission gearing

The Speedsynchro® series uses an integrated transmission gearing with a transmission ratio of 1:4.412 and combines it with the Softsynchro® minimal length compensation function.

For achieving a high tool speed at a low spindle speed in order to reduce cycle time, save energy, reduce axial force and increase efficiency.

1) Einstecktiefen E siehe Seite 754  
Clamping depths E, see page 754

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

Die Spannzangen-Aufnahme Speedsynchro® Modular NFC/IKZ kann nur mit Adaptionsschäfte und Transportarretierung eingesetzt werden.

Die Anpassung der Transportarretierung an die maschinenseitigen Vorgaben erfolgt durch EMUGE. Bitte wenden Sie sich hierfür an den für Sie zuständigen Vertriebspartner.

The collet holder Speedsynchro® Modular NFC/IKZ can only be used with adapter shank and stop fixture.

The adaptation of the stop fixture to the specifications of the machine is carried out by EMUGE. Please contact your responsible distribution partner for more information.

## Typenreihe KSN KSN Series

### Einsatz auf CNC-Bearbeitungszentren und konventionellen Werkzeugmaschinen

Die Genauigkeit der programmierten Gewindetiefe wird durch einen Druckpunktmechanismus garantiert. Auftretende Differenzen zwischen dem Maschinenvorschub und der Gewindesteigung werden durch einen Längenausgleich kompensiert.

### Application on CNC machining centres and conventional machine tools

The accuracy of the programmed thread depth is guaranteed by a pressure point mechanism. Arising differences between spindle feed and thread pitch are compensated by a length compensation.

# KSN

## HSK-A

### DIN 69893-1

Einsatz auf CNC-Bearbeitungszentren, sonstigen Werkzeugmaschinen und Säulenbohrmaschinen

For use on CNC machining centres, other machine tools and pillar drilling machines

1) Einstecktiefen E siehe Seite 754  
Clamping depths E, see page 754

Weitere Ausführungen auf Anfrage  
Further designs upon request

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

## Zubehör Accessories

Spannzangen Typ ER (GB)  
Collets type ER (GB)

» 746 - 747

Dichtscheiben Typ DS/ER und Kühlschleiben Typ KS/ER  
Sealing disks type DS/ER and coolant flush disks type KS/ER

» 750

Spannschlüssel  
Clamping wrench

» 758

Adaptionsschäfte  
Adapter shanks

» 740

## Typenreihen für Minimalmengenschmierung Minimum Quantity Lubrication Series

### Einsatz auf Maschinen mit Minimalmengenschmierung (MMS)

Strömungsoptimierte Übergabe des MMS-Mediums von der Maschinenspindel zum Gewindewerkzeug.

### Application on machines with minimum-quantity lubrication (MQL)

Flow-optimised transfer of the MQL medium from machine spindle to threading tool.

# Softsynchro® Modular/MQL

## HSK-A

1) Einstecktiefen E siehe Seite 754  
Clamping depths E, see page 754

Kühlschmierstoffrohr und Längeneinstellschraube sind Bestandteile der Spannzangen-Aufnahme und für eine optimale MMS-Übergabe notwendig  
Coolant-lubricant tube and length adjustment screw are included in collet holder and required for optimum MQL transfer

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

MMS-Übergabe passend zu DIN 69090-4 und vielen Werknormen  
MQL supply according to DIN 69090-4 and many internal standards

1) Einstecktiefen E siehe Seite 754  
Clamping depths E, see page 754

Kühlschmierstoffrohr und Längeneinstellschraube sind Bestandteile der Spannzangen-Aufnahme und für eine optimale MMS-Übergabe notwendig  
Coolant-lubricant tube and length adjustment screw are included in collet holder and required for optimum MQL transfer

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

MMS-Übergabe passend zu DIN 69090-4 und vielen Werknormen  
MQL supply according to DIN 69090-4 and many internal standards

## Zubehör

## Accessories

Spannzangen Typ ER (GB)  
Collets type ER (GB)

» 746 - 747

Dichtscheiben Typ DS/ER  
Sealing disks type DS/ER

» 750

Längeneinstellschrauben  
Length adjustment screws

» 744

Kühlschmierstoffrohre und Schlüssel  
Coolant tubes and wrenches

» 742 - 743

Spannschlüsselsatz  
Set of clamping wrenches

» 758

Montagevorrichtung  
Assembly device

» 756

Drehmomentschlüssel  
Torque wrenches

» 759

# Softsynchro® Modular/MQL

**HSK-C 2)**  
**DIN 69893-1**

**MQL  
1**

$p_{max}$   
**10 bar**  
(140 psi)

**Soft**

**L+ 2 mm**

**Einsatz auf Maschinen  
mit Synchronspindel**

For use on machines  
with synchronous spindle

1) Einstecktiefen E siehe Seite 754  
Clamping depths E, see page 754

2) Außenkontur entspricht DIN 69893 A, Innenkontur nach DIN 69893 C  
Outside contour acc. DIN 69893 A, inside contour acc. DIN 69893 C

Füllstück und Längeneinstellschraube sind Bestandteile der Spannzangen-Aufnahme und für eine optimale MMS-Übergabe notwendig  
Filler piece and length adjustment screw are included in collet holder and required for optimum MQL transfer

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

MMS-Übergabe passend zu DIN 69090-4 und vielen Werknormen  
MQL supply according to DIN 69090-4 and many internal standards

## Softsynchro® Modular/MQL

HSK-C 2)  
DIN 69893-1

MQL  
1

$p_{\max}$

# Softsynchro® Slim/MQL

## HSK-A

DIN 69893-1

 MQL  
1

 $p_{max}$   
10 bar  
(140 psi)

 $\leftarrow \rightarrow$   
T C  
Soft

L+ 2 mm

 Einsatz auf Maschinen  
mit Synchronspindel

 For use on machines  
with synchronous spindle

### Zubehör Accessories

 Spannzangen Typ ER (GB)  
Collets type ER (GB)

» 746 - 747

 Dichtscheiben Typ DS/ER  
Sealing disks type DS/ER

» 750

 Längeneinstellschrauben  
Length adjustment screws

» 745

 Spannschlüsselsatz  
Set of clamping wrenches

» 758

 Montagevorrichtung  
Assembly device

» 756

 Drehmomentschlüssel  
Torque wrenches

» 759

## Softsynchro® Slim/MQL

HSK-A

DIN 69893-1

Einsatz auf Maschinen  
mit SynchronspindelFor use on machines  
with synchronous spindle

1) Einstecktiefen E siehe Seite 754  
Clamping depths E, see page 754

Kühlschmierstoffrohr und Längeneinstellschraube sind Bestandteile der Spannzangen-Aufnahme und für eine optimale MMS-Übergabe notwendig  
Coolant-lubricant tube and length adjustment screw are included in collet holder and required for optimum MQL transfer

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

MMS-Übergabe passend zu DIN 69090-4 und vielen Werknormen  
MQL supply according to DIN 69090-4 and many internal standards

# Softsynchro® Slim/MQL

## HSK-A

DIN 69893-1

MQL

### Zubehör

#### Accessories

Spannzangen Typ ER (GB)  
Collets type ER (GB)

» 746 - 747

Dichtscheiben Typ DS/ER  
Sealing disks type DS/ER

» 750

Längeneinstellschrauben  
Length adjustment screws

» 745

Spannschlüsselsatz  
Set of clamping wrenches

» 758

Montagevorrichtung  
Assembly device

» 756

Drehmomentschlüssel  
Torque wrenches

» 759

## Softsynchro® Slim/MQL

HSK-A

DIN 69893-1

Einsatz auf Maschinen  
mit SynchronspindelFor use on machines  
with synchronous spindle

1) Einstecktiefen E siehe Seite 754  
Clamping depths E, see page 754

Kühlschmierstoffrohr und Längeneinstellschraube sind Bestandteile der Spannzangen-Aufnahme und für eine optimale MMS-Übergabe notwendig  
Coolant-lubricant tube and length adjustment screw are included in collet holder and required for optimum MQL transfer

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

MMS-Übergabe passend zu DIN 69090-4 und vielen Werknormen  
MQL supply according to DIN 69090-4 and many internal standards

# Softsynchro® Xtension/MQL

## HSK-A

DIN 69893-1

MQL  
1

$p_{max}$   
6 bar  
(85 psi)

L+ 2 mm

Einsatz auf Maschinen  
mit Synchronspindel

For use on machines  
with synchronous spindle

1) Einstecktiefen E siehe Seite 754  
Clamping depths E, see page 754

Kühlschmierstoffrohr und Längeneinstellschraube sind Bestandteile der Spannzangen-Aufnahme und für eine optimale MMS-Übergabe notwendig  
Coolant-lubricant tube and length adjustment screw are included in collet holder and required for optimum MQL transfer

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

MMS-Übergabe passend zu DIN 69090-4 und vielen Werknormen  
MQL supply according to DIN 69090-4 and many internal standards

### Zubehör

Clamping nut for sealing disks is included in the delivery

Die Spannzangen-Aufnahme Speedsynchro® Modular NFC/MQL kann nur mit Adaptionsschäfte, MMS-Kühlschmierstoffrohr, Transportarretierung und Längeneinstellschraube eingesetzt werden.

Die Anpassung der Transportarretierung an die maschinenseitigen Vorgaben erfolgt durch EMUGE. Bitte wenden Sie sich hierfür an den für Sie zuständigen Vertriebspartner.

The collet holder Speedsynchro® Modular NFC/MQL can only be used with adapter shank, MQL coolant tube, stop fixture and length adjustment screw.

The adaptation of the stop fixture to the specifications of the machine is carried out by EMUGE. Please contact your responsible distribution partner for more information.

<sup>2)</sup> Außenkontur entspricht DIN 69893 A, Innenkontur nach DIN 69893 C  
Outside contour acc. DIN 69893 A, inside contour acc. DIN 69893 C

Weitere Ausführungen auf Anfrage  
Further designs upon request

Kühlschmierstoffrohr ist im Schaft enthalten und darf nicht demontiert werden, da sonst die Funktion der MMS-Übergabe nicht mehr gewährleistet ist!  
Coolant tube is integrated into the shank and must not be disassembled, otherwise the function of the MQL transfer is no longer warranted!

MMS-Übergabe passend zu DIN 69090-4 und vielen Werknormen  
MQL supply according to DIN 69090-4 and many internal standards

1) Bei Verwendung von Gewindebohrern / Gewindeformern mit innerer Kühlschmierstoff-Zufuhr  
If used with taps / cold-forming taps with internal coolant supply

2) Einstecktiefen E siehe Seite 754  
Clamping depths E, see page 754

Großer Griffing – in Kombination mit Schnellwechsel-Aufnahmen der Typenreihe KSN/MQL – ermöglicht stirnseitige Abdichtung  
Large ring handle – combined with quick-change tap holders KSN/MQL – enables face sealing

Längeneinstellschraube ist Bestandteil des Schnellwechsel-Einsatzes und für eine optimale MMS-Übergabe notwendig  
Length adjustment screw is included in quick-change adapter and required for optimum MQL transfer

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

## Zubehör Accessories

Spannzangen Typ ER (GB)  
Collets type ER (GB) ▶▶ 746 - 747

Dichtscheiben Typ DS/ER  
Sealing disks type DS/ER ▶▶ 750

Spannschlüssel  
Clamping wrench ▶▶ 758

Aufnahmekopf AEU  
Adapter head AEU ▶▶ 760

## Typenreihe SFM

### SFM Series

#### Einsatz auf Mehrspindelmaschinen und Transferstraßen

Auf Grund ihrer schlanken Bauform besonders geeignet auch für Mehrspindelköpfe.

#### Application on multi-spindle machines and transfer lines

Especially suitable, too, for multi-spindle heads due to their slim design.

## Typenreihe SWITCH-MASTER®

### SWITCH-MASTER® Series

#### Einsatz auf CNC-Bearbeitungszentren und Sondermaschinen mit und ohne Synchronspindel

Durch das integrierte Wendegetriebe entfällt der Drehrichtungswechsel der Maschinenspindel beim Rücklauf. Speziell beim Typ SWITCH-MASTER® ergibt sich eine erhebliche Zeiteinsparung durch den patentierten Schaltmechanismus mittels Druckluft.

#### Application on CNC machining centres and special machines with and without synchronous spindle

No change of rotating direction of machine spindle at reverse stroke required due to integrated reverse gear. Especially for the SWITCH-MASTER® considerable saving of time due to patent-protected switch mechanism by compressed air.

## SWITCH-MASTER®

**Zylinderschaft**  
Cylindrical shank

DIN 1835-1

Form B

**Einsatz auf Maschinen mit Synchronspindel, CNC-Bearbeitungszentren und sonstigen Werkzeugmaschinen**

For use on machines with synchronous spindle, CNC machining centres and other machine tools

Clamping depths E, see page 754

Der Gewindeschneidapparat benötigt zum Reversieren Hilfsenergie in Form von Druckluft (6  $\pm_{0,5}^1$  bar)  
The tapping attachment requires auxiliary energy = pressurised air (6  $\pm_{0,5}^1$  bar) for reversing

Die Übergabe der Druckluft erfolgt über einen speziellen Arretierblock, der maschinenseitig angebracht sein muss und in den gleichzeitig die Transportarretierung einrastet  
The transfer of pressurised air is effected by means of a special stop block mounted on the machine, and into which the stop fixture engages

Der Gewindeschneidapparat SWITCH-MASTER® kann nur mit Adaptionsschaft und Transportarretierung eingesetzt werden.

Die Anpassung der Transportarretierung an die maschinenseitigen Vorgaben erfolgt durch EMUGE. Bitte wenden Sie sich hierfür an den für Sie zuständigen Vertriebspartner.

The tapping attachment SWITCH-MASTER® can only be used with adapter shank and stop fixture.

The adaptation of the stop fixture to the specifications of the machine is carried out by EMUGE. Please contact your responsible distribution partner for more information.

## Typenreihe HF HF Series

### Einsatz auf CNC-Bearbeitungszentren und Bohrwerken

Zur Herstellung von großen Gewinden bis M160. Je nach Typ mit Sicherheitsfunktionen wie einstellbarer Überlastkupplung und großem Längenausgleich ausgestattet.

### Application on CNC machining centres and boring mills

For the production of big threads up to M160. Depending on the type: equipped with safety functions just like adjustable overload clutch and large length compensation.

## Typenreihe EM EM Series

### Passend zu all unseren Schnellwechsel-Aufnahmen der Typenreihen KSN und SFM

Je nach Typ mit Kühlschmierstoff-Zufuhr durch das Zentrum des Werkzeugs oder am Schaft entlang, Überlastkupplung und Längennachstellung.

Die Spannung des Werkzeugs erfolgt je nach Typ durch ein Kugelspannsystem, Spannzangen Typ ER (GB), Spannzangen Typ PGR (GB) oder durch unser E-Lock-System.

### Suitable for all our quick-change tap holders of KSN and SFM series

Depending on the type: with coolant supply through the tool centre or along the shank, overload clutch and length adjustment.

Clamping of the tool is achieved – depending on the type – by a ball clamping system, collets type ER (GB), collets type PGR (GB) or by our E-Lock system.

1) Bei Verwendung von Gewindebohrern / Gewindeformern mit innerer Kühlschmierstoff-Zufuhr  
If used with taps / cold-forming taps with internal coolant supply

Weitere Größen auf Anfrage  
Further sizes upon request

Großer Griffing – in Kombination mit Softsynchro® QuickLock – ermöglicht stirnseitige Abdichtung  
Large ring handle – combined with Softsynchro® Quicklock – enables face sealing

Ausführung mit innerer Kühlschmierstoff-Zufuhr entlang des Werkzeugschafts für Gewindebohrer / Gewindeformer ohne innere Kühlschmierstoff-Zufuhr auf Anfrage  
Design with internal coolant-lubricant supply along the tool shank for taps / cold-forming taps without internal coolant-lubricant supply on request

Bei Verwendung von Vollhartmetall-Gewindebohrern / -Gewindeformern empfehlen wir Schnellwechsel-Einsätze Typ EM-Z/QuickLock, siehe Seite 734  
When using solid carbide taps / cold-forming taps we recommend quick-change adapters type EM-Z/QuickLock, see page 734

1) Bei Verwendung von Gewindebohrern / Gewindeformern mit innerer Kühlschmierstoff-Zufuhr  
If used with taps / cold-forming taps with internal coolant supply

2) Einstecktiefen E siehe Seite 754  
Clamping depths E, see page 754

**EM00-L/ER/IKZ:**

Spannmutter ohne integrierte Abdichtung ist im Lieferumfang enthalten  
Clamping nut without integrated seal is included in the delivery

**EM01-L/ER/IKZ, EM03-L/ER/IKZ:**

Spannmutter für Dichtscheiben ist im Lieferumfang enthalten  
Clamping nut for sealing disks is included in the delivery

**Zubehör**

## Accessories

Spannzangen Typ ER (GB)  
Collets type ER (GB)

» 746 - 747

Dichtscheiben Typ DS/ER und Kühlschleiben Typ KS/ER  
Sealing disks type DS/ER and coolant flush disks type KS/ER

» 750

Aufnahmekopf AEU  
Adapter head AEU

» 760

Spannmutter mit integrierter Abdichtung Typ Hi-Q/ERMC 11  
Clamping nut with integrated seal, type Hi-Q/ERMC 11

» 752

Spannschlüsselsatz  
Set of clamping wrenches

» 758

**Montage des Kühlschmierstoffrohrs im HSK-Schaft**

1. Montageschlüssel auf das Kühlschmierstoffrohr stecken.

**Wichtig:** Auf die Stellung der Zapfen zu den Nuten achten!

2. Kühlschmierstoffrohr in den Schaft einschrauben.

**Assembly of the coolant tube in the hollow taper (HSK) shank**

1. Put assembly wrench on the coolant tube.

**Important:** Watch the position of the pins against the grooves

2. Screw coolant tube into the shank.

**Von beiden Seiten justierbar, für Werkzeugschäfte mit Innenzentrierung 60°**  
Adjustable from both sides, for tool shanks with female centre 60°

Die Klemmung des Gewindewerkzeugs erfolgt über 4 Gewindestifte am Vierkant  
The threading tool is clamped by means of 4 worm screws on the square

Weitere Ausführungen auf Anfrage  
Further designs upon request

Auf Grund des Längenausgleichs können keine Dichtscheiben in die Spannmutter gesetzt werden  
Due to the length compensation, sealing disks cannot be used in the clamping nut

1) In Kombination mit Spannzangen Typ ER 50 und Softsynchro® 5  
In combination with collets type ER 50 and Softsynchro® 5

## Montage der Dichtscheibe bei den Größen 1-5

1. Dichtscheibe wie abgebildet in die Spannmutter einsetzen, nach vorne schieben, bis ein deutliches Einrasten zu hören ist. Die Dichtscheibe ist dann bündig mit der Spannmutter.  
Bei der **Größe 0** können Spannmutter mit integriertem Dichtsystem verwendet werden – es wird keine separate Dichtscheibe benötigt. Die Spannmutter wird entsprechend dem eingesetzten Spanndurchmesser gewählt.

## Assembly of sealing disk in the sizes 1-5

1. Insert the sealing disk into the clamping nut as shown in the illustration, and push it forward until you can clearly hear it engaging. After that, the sealing disk is flush with the clamping nut.  
In **size 0**, you can use clamping nuts with integrated sealing system – a separate sealing disk is not needed then. The clamping nut must be selected in accordance with the clamping diameter used.

2. Spannzange in die Spannmutter einschieben, anschließend kippen. Nut der Spannzange an der markierten Stelle in den Exzenterring der Spannmutter einrasten. Spannzange in entgegengesetzte Richtung kippen, bis diese deutlich hörbar einrastet.

2. Insert the collet into the clamping nut, then tilt it. The groove of the collet must engage in the eccentric ring of the clamping nut at the marked position. Now, tilt the collet in the opposite direction until you clearly hear it engaging.

3. Spannmutter mit der eingerasteten Spannzange auf das Gewinde der Spannzangen-Aufnahme schrauben.  
**Wichtig:** Nur Spannmutter mit richtig eingerasteter Spannzange montieren!

3. Screw the clamping nut with the engaged collet onto the thread of the holder.  
**Important:** Only screw on clamping nuts with correctly engaged collet!

4. Werkzeug einschieben.  
**Wichtig:** Wird eine Spannzange mit integriertem Vierkant verwendet, muss das Werkzeug durch drehen in die Position gebracht werden, dass es in das Vierkant der Spannzange geschoben werden kann.
5. Spannmutter mit Schlüssel festziehen.  
Hierbei sind die empf. Anzugsdrehmomente aus der Tabelle zu beachten.

4. Insert tool.  
**Important:** If you use a collet with integrated square, make sure to turn the tool around until it is in a position that allows it to be pushed into the square seat of the collet.
5. Tighten the clamping nut with the wrench.  
Observe the rec. torque values in the table.

| Type<br>Type    | Empf. Anzugsdrehmoment<br>Rec. tightening torque<br>[Nm] |
|-----------------|----------------------------------------------------------|

Angaben gelten bei Verwendung von Spannzangen Typ ER-GB. Bei höheren Anzugsdrehmomenten können an der Spannzangen-Aufnahme bleibende Deformationen auftreten. Um das korrekte Drehmoment einstellen zu können, empfehlen wir die Verwendung eines Drehmomentschlüssels, siehe Seite 759.

The indicated values apply to collets type ER-GB. Higher tightening torque may result in the damage of the collet. For the setting of the correct torque, we recommend using a torque wrench, see page 759.

**Wichtig:** Um die Spannzangen-Aufnahme nicht zu beschädigen, muss beim Anziehen der Spannmutter mittels Schlüssel **1** mit dem Gabelschlüssel **2** gegengehalten werden. Passende Spannschlüssel und Montagevorrichtungen finden Sie auf Seite 756 - 758.

**Important:** In order to avoid damage to the holder, please counter with open-ended spanner **2** while tightening the clamping nut with wrench **1**. For suitable clamping wrenches and assembly devices, see pages 756 - 758.

Diese Vierkantbolzen stellen die Verbindung zwischen Drehmomentschlüssel und Schnellwechsel-Einsatz her, wobei das Vierkant K<sub>1</sub> in das Vierkant des Drehmomentschlüssels eingesteckt und der Schaft D<sub>2</sub> mit Vierkant K<sub>2</sub> in den Einsatz eingespannt wird.  
These square pins establish the connection between torque wrench and adapter: the square K<sub>1</sub> is inserted into the square seat of the torque wrench, and the shank end D<sub>2</sub> with square K<sub>2</sub> is clamped in the adapter.

### Einstellen und Prüfen der Überlastkupplung von Schnellwechsel-Einsätzen der Typen EM-U, EM-UL und HF:

Grundsätzlich richtet sich das einzustellende Drehmoment nach

- Abmessung
- Geometrie und Beschichtung des Werkzeuges
- Zu bearbeitender Werkstoff
- Art und Qualität des Kühlschmierstoffes
- Kernlochdurchmesser

### Die Tabelle zeigt Richtwerte zum Gewindebohren in Stahl mit einer Zugfestigkeit von 600-800 N/mm<sup>2</sup>.

Eventuell müssen die Einstellwerte dem jeweiligen Bearbeitungsfall angepasst werden (z.B. beim Gewindeformen).

### Setting and checking of the overload clutch on quick-change adapters of types EM-U, EM-UL and HF:

Generally speaking, the torque to be set depends on

- Size
- Geometry and coating of the tool
- Workpiece material
- Type and quality of the coolant-lubricant
- Drilled hole diameter

### The table contains standard values for thread cutting in steel with a tensile strength of 600-800 N/mm<sup>2</sup>.

These values generally need to be adjusted to the individual work case (e.g. for cold-forming of threads).

| Drehmoment<br>Torque | Gewindesystem<br>Thread system |       |     |     |       |       |             |             |              |    |

| <b>Zeiteinsparung bei der Innengewindefertigung</b><br>Um Maschinenkapazität einzusparen, sollen Haupt- und Nebenzeiten bei der Innengewindefertigung in Guss-Aluminium-Bauteilen reduziert werden.                                                                                                                                                                                                           | <b>Time saving in internal thread production</b><br>In order to save machine capacity, main and non-productive times in internal thread production in cast aluminium components are to be reduced.                                                                                                                                                                      |
| Idee                                                                                                                                                                                                                                                                                                                                                                                                          | Idea                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Einsparung von Arbeitsschritten</b><br>Bei der konventionellen Innengewindefertigung wird in 2 Schritten gearbeitet. Schritt 1 ist das Vorbohren. Schritt 2 das Einbringen der Gewinde wahlweise mit Gewindebohrern, Gewindeformern oder Gewindefräsern. Durch den notwendigen Werkzeugwechsel entstehen hohe Prozesszeiten. Zur Verkürzung dieser Prozesszeiten können Arbeitsschritte eingespart werden. | <b>Saving of working steps</b><br>In conventional internal thread production, the machining is carried out in 2 steps. Step 1 is pre-drilling. Step 2 is machining the threads using either taps, cold-forming taps or thread milling cutters. The necessary tool change results in long process times. To shorten these process times some working steps can be saved. |
| Lösung                                                                                                                                                                                                                                                                                                                                                                                                        | Solution                                                                                                                                                                                                                                                                                                                                                                |
| <b>Innovative Fertigungstechnologie</b><br>Das innovative Verfahren EMUGE Taptor® kombiniert das Vorbohren und die Gewindefertigung in einem Arbeitsschritt. Dadurch entfällt der sonst notwendige Werkzeugwechsel.                                                                                                                                                                                           | <b>Innovative manufacturing technology</b><br>The innovative EMUGE Taptor® process combines pre-drilling and thread production in one single working step. This eliminates the need to change tools.                                                                                                                                                                    |

**Ergebnis**
**EMUGE Taptor® – Zeitvorteil**

Der Zeitvorteil ergibt sich aus mehreren Faktoren:

1. Entfall des Vorbohrens inklusive Verfahrenswege und Werkzeugwechsel
2. Reduzierung der Hauptzeit durch Verwendung des Speedsynchro Taptor®.

In einer Beispielanwendung (Bearbeitung einer Zylinderkopfhauseise in der Abmessung M6, 12 mm tief) ergibt sich eine Zeiteinsparung je Gewinde von etwa 2 Sekunden.

**Result**
**EMUGE Taptor® – Time Advantage**

The time advantage results from several factors:

1. Elimination of pre-drilling including traverse paths and tool change
2. Reduction of the main time by using the Speedsynchro Taptor®.

In a sample application (machining of a cylinder head cover side in the dimension M6, 12 mm deep), the time saving is about 2 seconds per thread.

Das erzeugte Gewinde entspricht den Vorgaben der DIN ISO 965 (Metrische ISO-Gewinde). Im Gewindegrund entsteht ein Freistich, dessen Länge dem des Anschnittes konventioneller Gewindewerkzeuge entspricht. Die Schraube kann in diesen Freistich eingedreht werden.

The thread produced corresponds to the specifications of DIN ISO 965 (Metric ISO thread). An undercut is created at the bottom of the thread, the length of which corresponds to the lead-in chamfer of a conventional threading tool. The screw can be screwed into this undercut.

**Verfahreigenschaften**

Das Verfahren verwendet eine patentrechtlich geschützte Technologie der Audi AG.

**Gewindefestigkeit:**

Erste Untersuchungen zeigen eine mindestens gleichwertige Festigkeit zu konventionellen Gewinden.

**Gewindeprüfung:**

Die Prüfung erfolgt mit handelsüblichen GewindeGrenzlehrdornen nach DIN ISO 1502.

**Lochformen:**

Geeignet sowohl für die Grundloch- als auch für die Durchgangslochbearbeitung.

**Werkzeugaufnahme:**

Der Taptor® wird im Speedsynchro Taptor® aufgenommen.

**Maschinenvoraussetzungen:**

Die Maschine muss für die synchrone Gewindebearbeitung geeignet sein.

**Process Properties**

The process uses a patent-protected technology of Audi AG.

**Thread strength:**

First tests show a strength at least equivalent to that of conventional threads.

**Thread testing:**

The test is carried out with standard thread plug gauges according to DIN ISO 1502.

**Hole shapes:**

Suitable for both blind and through hole machining.

**Tool holder:**

Der Taptor® is mounted in the Speedsynchro Taptor®.

**Machine requirements:**

The machine must be suitable for synchronous thread machining.

| <b>Zeiteinsparung bei gleichzeitig geringen Kräften</b><br>Durch die Erhöhung des Vorschubs bei gleicher Drehzahl werden die Hauptzeiten erheblich gesenkt. Dadurch entstehen aber höhere Bearbeitungskräfte, welche zu Problemen hinsichtlich der Lebensdauer des Werkzeugs, der Spannung der Bauteile sowie der Werkzeugspannung führen. Zudem können Toleranzen am Bauteil ggf. nicht eingehalten werden.                                               | <b>Time saving while drilling with low cutting forces, is it possible?</b><br>Main machining times can considerably be reduced by increasing the feed rate while keeping a constant rotational speed. This increase will lead to much higher machining forces. Forces that will have a negative effect on the tool life of the drill, the clamping of the component and the clamping of the drill. In addition, tolerances on the component may not be kept anymore.      |
| Idee                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Idea                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Reduktion der Bearbeitungskräfte und verbesserter Spanbruch</b><br>Um gängige Bohrtiefen zu erreichen ist es notwendig, trotz des erhöhten Vorschubs einen kurzen Span zu erzeugen. Gleichzeitig muss die Bohrspitze große Freiwinkel besitzen, um die Kräfte unter Kontrolle zu bringen. Speziell behandelte Oberflächen helfen, die Prozesssicherheit zu erhöhen.                                                                                     | <b>Reducing machining forces and optimising chip-breaking!</b><br>To achieve common drilling depths with an increased feed, it becomes absolutely necessary to produce short chips only. At the same time, in order to control the cutting forces, the drill tip must have a large relief angle. And for increasing the process reliability, a specially treated surface must be considered.                                                                              |
| Lösung                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Solution                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Spanteiler und Oberflächenbehandlung</b><br>Der Spanteiler hilft den Span kurz zu halten und die Bearbeitungskräfte zu kontrollieren. Neu entwickelte Oberflächenbehandlungen und eine speziell für diese Anwendungen ausgelegte Hartstoffschicht ermöglichen eine sichere Spanabfuhr.                                                                                                                                                                  | <b>A chip breaker and a special surface treatment will bring the solution!</b><br>The chip breaker helps to keep the chip short and to control the machining forces. Newly EMUGE developed surface treatments and an especially designed hard coating enable a reliable chip evacuation for these applications.                                                                                                                                                           |
| Ergebnis                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Result                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Zeitvorteil von 50% und mehr bei der Zerspanung</b><br>Die Hauptzeiten werden erheblich reduziert, was zu Reduktion von Taktzeiten und Einsparung von Maschinenkapazitäten führt. Die Produktivität wird erhöht und Ressourcen geschont.                                                                                                                                                                                                                | <b>Time advantage of 50% and more in the machining process</b><br>The main machining times are considerably reduced, resulting in reduced cycle times and savings in machine capacity. Productivity is increased and resources are saved.                                                                                                                                                                                                                                 |
| <b>Axialkraft wird um ca. 50% reduziert</b><br>Im Vergleich zu Serienwerkzeugen kann mit einem verdoppelten Vorschub gebohrt werden, wobei die Axialkraft nicht ansteigt. Wenn der PunchDrill mit dem Vorschub des Serienwerkzeugs eingesetzt wird, halbiert sich die Axialkraft. Das ist sehr nachhaltig, da die Leistungsaufnahme der Maschine sinkt. Zudem können labile Teile sowie Werkstücke in labilen Spannungen prozesssicherer gefertigt werden. | <b>Axial force reduced by approx. 50%</b><br>Drilling can be carried out at twice the feed rate compared to standard tools without increasing the axial force. The axial force is cut in half when the PunchDrill is used with the feed of the series tool. Very sustainable, as power consumption of the machine tool is reduced as well. In addition, unstable parts as well as workpieces with unstable clamping can be manufactured with greater process reliability. |

## Verfahrenseigenschaften

- Bearbeitung von Aluminium-Gusslegierungen mit mindestens 7% Si-Anteil und Magnesium-Legierungen
- Bohrtiefe bis ca. 8 x D
- Nenndurchmesser-Bereich von 3,3 mm bis 12 mm
- Standzeit vergleichbar mit konventionellen Bohrwerkzeugen
- Stufenwerkzeuge möglich
- Gute Zentrierfähigkeit führt zu hoher Positionsgenauigkeit der Bohrungen
- Bearbeitung mit normalen Bohrzyklus auf CNC-Maschinen
- Zum Patent angemeldete Bohrergeometrie
- Minimalmengenschmierung möglich
- Schnittgeschwindigkeiten und Kühlmitteldrücke sind analog dem konventionellen Bohren anzuwenden
- Die Werkzeuge sind von EMUGE nachschleifbar

## Process characteristics

- Machining of aluminium cast alloys with at least 7% Si content and magnesium alloys
- Drilling depth up to approx. 8 x D
- Nominal diameter range from 3.3 mm to 12 mm
- Tool life comparable with conventional drilling tools
- Step tools possible
- Excellent centring capability leads to high positioning accuracy of the drill holes
- Machining with normal drilling cycle on CNC machines
- Patent-pending drill geometry
- Minimum quantity lubrication possible
- Cutting speeds and coolant pressures are to be applied analogous to conventional drilling
- The tools can be resharpened by EMUGE

## Anwendungsbeispiel in Aluminium-Gusslegierungen

## Application example in aluminium cast alloys

## Verfügbarkeit

- Da es sich bei der Bearbeitung von GAL- und Magnesiumbauteilen zumeist um anwendungsspezifische Sonderwerkzeuge handelt, gibt es kein lagerhaltiges Standardprogramm
- Lieferzeit der Sonderwerkzeuge beträgt max. 7 Wochen
- Es ist möglich, Grundsatzversuche mit bauteilunabhängigen Musterwerkzeugen durchzuführen, welche kurzfristig von unseren Außendienstmitarbeitern zur Verfügung gestellt werden können
- **Geplante Produkterweiterung:**  
3-nutige Ausführung für vorgegossene Löcher

## Availability

- There is no standard programme available from stock as the machining of cast aluminium and magnesium components mostly involves application-specific special tools.
- Delivery time of the special tools is max. 7 weeks
- It is possible to carry out basic tests with component-independent sample tools, which can be made available at short notice by our sales representatives
- **Planned product expansion:**  
3-fluted version for pre-cast holes

Die EMUGE PunchTap-Technologie stellt neben Gewindebohren, Gewindeformen und Gewindefräsen eine weitere Technologie zur Gewindeherstellung dar. Mit ihrem innovativen, sehr kurzen Bewegungsablauf eröffnet sie eine völlig neue Dimension der Produktivität.

Die Grundidee der Kinematik gliedert sich in drei Arbeitsschritte. Voraussetzung ist eine Vorbohrung im Werkstück mit dem entsprechenden Vorbohrdurchmesser.

The EMUGE PunchTap technology constitutes besides tapping, cold-forming of threads and thread milling another technology for thread production. Thanks to its innovative, very short motion process, it establishes an entirely new dimension of productivity.

The basic idea of the kinematics is divided into three working steps. A drilled pilot hole in the workpiece with the suitable preparatory diameter is required.

| Schritt 1 · Step 1                                                                                                                                                                                                                                                                                                                                                      | Schritt 2 · Step 2                                                                                                                                                                                                                                                                         | Schritt 3 · Step 3                                                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  <p><b>Punch (Einfahren)<br/>Punch (Plunge)</b></p> <p>Gewindetiefe<br/>Thread depth</p> <p>In der vorgefertigten Bohrungswand entstehen zwei Helikalnuten.<br/>Two helical grooves are generated in the pre-machined wall of the hole.</p>                                           |  <p><b>1/2 P Gewindeformen<br/>Thread-forming</b></p>                                                                                                                                                     |  <p><b>Herausfahren<br/>Retraction</b></p>                                                                                                        |
| <p><b>Schritt 1: Punch (Einfahren)</b></p> <p>Der PunchTap besitzt kein durchgehendes Gewindeprofil am Umfang, sondern nur zwei Zahnreihen, die um 180° versetzt angeordnet sind. Dabei übernimmt der erste Zahn jeder Zahnreihe die Nuterzeugung und ermöglicht somit den ersten Schritt des Verfahrens, das <b>helikale Einfahren in die Vorbohrung</b>.</p>          | <p><b>Schritt 2: Gewindeformen</b></p> <p>Ist der PunchTap auf Gewindetiefe angekommen, erfolgt das <b>Gewindeformen</b>, welches durch das synchrone Verfahren der Vorschubachse um die halbe Gewindesteigung bei gleichzeitiger Rotation des Werkzeuges um etwa 180° stattfindet.</p>    | <p><b>Schritt 3: Herausfahren</b></p> <p>Nach der Ausführung des Gewindeformvorgangs wird der PunchTap durch die erzeugten Nuten <b>aus der Bohrung herausgefahren</b>.</p> <p>Entstanden ist ein Gewinde mit zwei Helikalnuten.</p> |
| <p><b>Step 1: Punch (Plunge)</b></p> <p>The PunchTap does not have a continuous thread profile on the circumference but two rows of teeth which are offset by 180°.</p> <p>The first tooth of each row of teeth is responsible for producing the groove and thereby enables the first step of the process, the <b>helical plunge into the pre-drilled tap hole</b>.</p> | <p><b>Step 2: Thread-forming</b></p> <p>Once the PunchTap has reached the depth of the thread, the <b>forming of the thread</b> starts which is executed by a synchronous movement of the feed axis by half of the pitch while simultaneously rotating the tool by approximately 180°.</p> | <p><b>Step 3: Retraction</b></p> <p>Once the thread-forming process is finished, the PunchTap is <b>retracted from the hole</b> through the generated grooves.</p> <p>The result is a thread with two helical grooves.</p>           |

### EMUGE Punch Tap – der kurze Weg

Vergleicht man den Werkzeugweg des EMUGE PunchTap mit dem Werkzeugweg herkömmlicher Gewindebohrer oder Gewindeformer, so fällt dieser bei einem Gewinde M6 mit 15 mm nutzbarer Gewindetiefe ca. 15 mal kürzer aus. Ergebnis ist eine deutliche Zeiteinsparung im Gewindezyklus von bis zu 75%.

### EMUGE PunchTap – the shortest way

When comparing the tool path of the EMUGE PunchTap with the tool path of conventional taps or cold-forming taps, it shows that the path is approximately 15 times shorter for a thread M6 with a depth of thread of 15 mm. The result is a significant time savings up to 75% in a threading cycle.

Untersuchungen am ISF der Universität Dortmund ergaben, dass das Punch Tap-Gewinde mit einem herkömmlich produzierten Gewinde in Eigenschaften und Ausreißfestigkeit vergleichbar ist.

Studies at the ISF at the University of Dortmund show that the thread produced by the Punch Tap is comparable with a conventionally produced thread in terms of properties and pull-out resistance.

### Werkzeugwegvergleich

### Comparison of tool paths

Die Möglichkeit eines Einsatzes der Punch Tap-Technologie hängt von den Prozessbedingungen ab und wird individuell ermittelt. Bei Interesse kontaktieren Sie uns bitte.

Weitere Informationen finden Sie unter [www.punchtap.com](http://www.punchtap.com)

The possibility of using the PunchTap technology depends on the process conditions and is determined in each individual case. If interested, please contact us.

Clamping Technology

## Spannsystem SG

Besser bekannt unter dem Begriff „Sägengewinde-Spannsystem“. Dieses wurde von EMUGE-FRANKEN erfunden und patentiert.

### Funktionsbeschreibung

Eine mehrfach geschlitzte **Spannbüchse** mit einem speziellen Sägengewinde wird durch das Einleiten der Axialkraft über die flache Flanke des Gewindes axial verschoben. Dabei entsteht eine radiale Expansion (Innenspannung) oder Einschnürung (Außenspannung). Das Werkstück wird gespannt.

### Vorteile

- Hohe Steifigkeit bei langen Spannflächen oder engen Platzverhältnissen
- Optimierte Störkonturen durch sehr schlanke Bauweise möglich
- Gleichmäßige Kraftverteilung auf der gesamten Spannfläche

### Merkmale

- Innen- und Außenspannung: von Spann- $\varnothing$  5 bis 600 mm
- Rundläufe ab 4  $\mu$ m, z. B. Spann- $\varnothing$  80 mm, ab 6  $\mu$ m wiederholbar
- 0,6 mm Standardhub im Durchmesser bei Spann- $\varnothing$  100 mm
- Spannung mit und ohne Axialkomponente möglich
- Sehr lange Spannflächen möglich
- Verschmutzungsunempfindlich durch Labyrinth-Effekt des Gewindes

## Clamping System SG

This clamping system, also known as “butress thread clamping”, was invented and patented by EMUGE-FRANKEN.

### Functional description

A multi-slotted **clamping bush** with a special buttress thread is axially displaced by the introduction of axial force via the flat flank of the thread. This creates a radial expansion (internal clamping) or constriction (external clamping). The workpiece is clamped.

### Advantages

- High rigidity with long clamping surfaces or restricted space conditions
- Optimised interference contours possible due to very slim design
- Uniform force distribution over the entire clamping surface

### Features

- Internal and external clamping: from clamping dia. 5 to 600 mm
- Run-out from 4  $\mu$ m, e.g. clamping dia. 80 mm, from 6  $\mu$ m repeatable
- 0.6 mm standard stroke in diameter with clamping dia. 100 mm
- Clamping with and without axial component possible
- Very long clamping surfaces possible
- Highly resistant to soiling due to labyrinth effect of the thread

## Spannsystem SL

Unsere Spannsysteme werden stetig optimiert. Hinter dem patentierten Spannsystem „SL“ steckt eine Weiterentwicklung der Spannsysteme SG und SP.

## Funktionsbeschreibung

Eine durch **additive Fertigung** hergestellte Spannbüchse, ausgestattet mit einer Vielzahl von längsgerichteten und **mäanderförmigen Spannsegmenten**, überbrückt eine radiale Expansion (Innenspannung) oder radiale Einschnürung (Außenspannung) von mehreren Millimetern. Die Spannsegmente sind dabei metallisch verbunden und benötigen keine Gummielemente zur Verformung. Die Betätigung erfolgt beispielsweise über ein Sägewinde.

## Vorteile

- Gleichmäßige Kraftverteilung auf der gesamten Spannlänge
- Verformungsarme Spannung von dünnwandigen Bauteilen
- Ausgleich von leichten Rundheitsfehlern

## Merkmale

- Innen- und Außenspannung: von Spann- $\varnothing$  15 bis 230 mm
- Rundläufe ab 4  $\mu\text{m}$ , z. B. Spann- $\varnothing$  100 mm, ab 6  $\mu\text{m}$  wiederholbar
- 2,5 mm Standardhub im Durchmesser bei Spann- $\varnothing$  100 mm
- Die patentierte Geometrie verhindert das Verschränken der einzelnen Spannsegmente

## Clamping System SL

Our clamping systems are constantly being optimised. The patented “SL” clamping system represents an advanced development of the SG and SP clamping systems.

## Functional description

A clamping sleeve produced by **additive manufacturing** equipped with a large number of longitudinally oriented **meander-shaped clamping segments**, bridges a radial expansion (internal clamping) or radial contraction (external clamping) of several millimetres. The clamping segments are metallically connected and do not require rubber elements for forming. For example, the actuation takes place via a buttress thread.

## Advantages

- Uniform force distribution over the entire clamping length
- Low-deformation clamping of thin-walled components
- Compensation of slight roundness errors

## Features

- Internal and external clamping: from clamping dia. 15 to 230 mm
- Runouts from 4  $\mu\text{m}$ , e.g. clamping dia. 100 mm, from 6  $\mu\text{m}$  repeatable
- 2.5 mm standard stroke in diameter with clamping dia. 100 mm
- The patented geometry prevents the interlocking of the individual clamping segments

## Spannsystem SZ

## Funktionsbeschreibung

Eine mehrfach geschlitzte **Spannzange** wird durch das Einleiten der Axialkraft über einen Kegel axial verschoben. Durch den Kegelwinkel entsteht eine radiale Expansion (Innenspannung) oder Einschnürung (Außenspannung). Das Werkstück wird gespannt.

## Vorteile

- Geeignet bei kurzer Spannbasis am Werkstück
- Spannungsmöglichkeit auch bei ausgefallenen Werkstückformen
- Fixierung von Durchmessern mit großen Toleranzen

## Merkmale

- Innen- und Außenspannung, von Spann- $\varnothing$  5 bis 600 mm
- Rundläufe ab 4  $\mu\text{m}$ , z. B. Spann- $\varnothing$  85 mm, ab 8  $\mu\text{m}$  wiederholbar
- 0,6 mm Standardhub im Durchmesser bei Spann- $\varnothing$  100 mm
- Spannung mit und ohne Axialkomponente möglich
- Doppelkegelausführung möglich

## Clamping System SZ

## Functional description

A multiple-slotted **collet** is axially displaced by the introduction of the axial force via a taper. The taper angle causes radial expansion (internal clamping) or contraction (external clamping). The workpiece is clamped.

## Advantages

- Suitable with short clamping base on the workpiece
- Clamping possibility even for unusual workpiece shapes
- Clamping of diameters with large tolerances

## Features

- Internal and external clamping, from clamping dia. 5 to 600 mm
- Run-out from 4  $\mu\text{m}$ , e.g. clamping dia. 85 mm, from 8  $\mu\text{m}$  repeatable
- 0.6 mm standard stroke in diameter with clamping dia. 100 mm
- Clamping with and without axial component possible
- Twin taper design possible

### Spannsystem ST

Dieses Spannsystem ist die patentierte Weiterentwicklung des Spannsystems SZ.

#### Funktionsbeschreibung

Eine mehrfach geschlitzte, einteilige **Spannzange** wird durch das Einleiten einer Axialkraft über zwei gleichgerichtete Kegel axial verschoben. Durch die Kegelwinkel entsteht eine radiale Expansion (Innenspannung) oder Einschnürung (Außenspannung). Durch die geometrische Auslegung kommt der von der Krafteinleitung weiter entfernte Spanndurchmesser als erstes zur Anlage. Der weitere Axialweg wird dann von einer Dehnzone aufgenommen, bis auch der zweite Spanndurchmesser zur Anlage kommt. Die erste Spannkraft erzeugt somit die Dehnzone, die zweite Spannkraft kommt von der Krafteinleitung.

#### Vorteile

- Ausgleich von geringen Toleranzunterschieden, Ungenauigkeiten und Formfehlern
- Variabel auslegbare Spannkraft an zwei Spannstellen
- Spannung mit Axialkomponente

#### Merkmale

- Innen- und Außenspannung: von Spann- $\varnothing$  15 bis 300 mm
- Rundläufe ab 4  $\mu$ m, z. B. Spann- $\varnothing$  75 mm, ab 7  $\mu$ m wiederholbar
- 0,6 mm Standardhub im Durchmesser bei Spann- $\varnothing$  100 mm

### Clamping System ST

This clamping system is the patented advanced development of the clamping system SZ.

#### Functional description

A multi-slotted, one-piece **collet** is axially displaced by the introduction of an axial force via two cones in the same direction. Due to the taper angles, a radial expansion (internal clamping) or constriction (external clamping) occurs. Due to the special geometric design, the clamping diameter further away from the force application comes into contact first. The further axial travel is then absorbed by an expansion zone until the second clamping diameter also comes into contact. The first clamping force thus generates the expansion zone, the second clamping force originates from the introduction of force.

#### Advantages

- Compensation for minor tolerance differences, inaccuracies and form errors
- Two clamping points are controlled with only one force application
- Clamping with axial component

#### Features

- Internal and external clamping: from clamping dia. 15 to 300 mm
- Run-out from 4  $\mu$ m, e.g. clamping dia. 75 mm, from 7  $\mu$ m repeatable
- 0.6 mm standard stroke in diameter with clamping dia. 100 mm

### Spannsystem SB

#### Funktionsbeschreibung

Im Prinzip erklärt hier der Name „Schrägbolzenfutter“ schon am besten die Funktionsweise. Durch das Einleiten einer Axialkraft werden meist **3 bis 8 schräg angeordnete längliche Bolzen** betätigt. Durch den Anstellwinkel dieser ergibt sich eine radiale Einschnürung der Spannbacken bei einem gleichzeitigen axialen Niederzug.

#### Vorteile

- Großer Spannhub ermöglicht Hinterschneidung
- Verschmutzungsunempfindlich dank guter Späneabfuhr
- Nur geringe Fliehkraftverluste

#### Merkmale

- Außenspannung: von Spann- $\varnothing$  15 bis 600 mm
- Rundläufe ab 20  $\mu$ m, z. B. Spann- $\varnothing$  55 mm, ab 25  $\mu$ m wiederholbar
- 10 mm Standardhub im Durchmesser bei Spann- $\varnothing$  100 mm
- Axialkomponente der Spannbacken

### Clamping System SB

#### Functional description

In principle, the description “bolt clamping chuck” already explains how this system works. The application of an axial force actuates **3 to 8 obliquely arranged oblong bolts**. The angle of attack of these bolts results in a radial constriction of the clamping jaws with a simultaneous axial pull-down.

#### Advantages

- Large clamping stroke enables undercuts
- Resistant to soiling thanks to excellent chip evacuation
- Only minor loss of centrifugal force

#### Features

- External clamping: from clamping dia. 15 to 600 mm
- Run-out from 20  $\mu$ m, e.g. clamping dia. 55 mm, from 25  $\mu$ m repeatable
- 10 mm standard stroke in diameter with clamping dia. 100 mm
- Axial component of the clamping jaws

## Spannsystem SM

## Clamping System SM

## Funktionsbeschreibung

Drei bis zwölf werkstückberührende **Spannbacken** sind auf einer **Membran** montiert. Diese erzeugt die zentrale Betätigungskraft: Wird in axialer Richtung Kraft auf die Membran ausgeübt, biegt sich diese durch. Dabei bewegen sich die Spannbacken axial und öffnen oder schließen je nach Kraftrichtung radial. Das Werkstück wird gespannt oder entspannt. Die Eigenfederkraft der Membran kann zur Vorzentrierung oder zur Erhöhung der Spannkraft genutzt werden.

## Vorteile

- Hohe Halte- bzw. Drehmomente, auch bei dünnwandigen Werkstücken
- Unempfindlich gegenüber Verschmutzung
- Überdurchschnittliche Lebensdauer der Spannmembran

## Merkmale

- Außenspannung: Spann- $\varnothing$  6 bis 650 mm
- Rundläufe ab 2  $\mu\text{m}$ , z. B. Spann- $\varnothing$  380 mm, ab 7  $\mu\text{m}$  wiederholbar
- 0,6 mm Standardhub im Durchmesser bei Spann- $\varnothing$  100 mm
- Spannbacken mit Axialkomponente
- Fliehkraftausgleich der Spannkraft
- Sicherheitsspannung bei Energieausfall möglich

## Functional description

Three to twelve **clamping jaws** in contact with the workpieces are mounted on a **diaphragm** which generates the central actuating force: If force is exerted on the diaphragm in the axial direction, it bends. The clamping jaws move axially and open or close radially depending on the direction of the force. The workpiece is clamped or released. The inherent spring force of the diaphragm can be used for pre-centring or for increasing the clamping force.

## Advantages

- High holding torques respectively torques even with thin-walled components
- Resistant to soiling
- Above-average service life of the clamping diaphragm

## Features

- External clamping: clamping dia. 6 to 650 mm
- Run-out from 2  $\mu\text{m}$ , e.g. clamping dia 380 mm, from 7  $\mu\text{m}$  repeatable
- 0.6 mm standard stroke in diameter with clamping dia. 100 mm
- Clamping jaws with axial component
- Centrifugal force compensation of the clamping force
- Safety clamping possible in case of power failure

## Spannsystem SP

## Clamping System SP

## Funktionsbeschreibung

Durch die axiale Kraftbeaufschlagung bewegen sich die **Spannhülsen** in Kraftrichtung und dehnen sich dabei radial aus. Hierdurch wird einerseits das Spiel zwischen Spannhülsen und Grundkörper, andererseits zwischen Spannhülsen und Werkstück beseitigt. Das Werkstück wird gespannt.

## Vorteile

- Fundiertes Know-how durch Lizenzfertigung seit 1950
- Keine Spannabdrücke durch geschlossene Spanndecke
- Fixierung verschiedener Durchmesser in unterschiedlichen Spannebenen

## Merkmale

- Innenspannung: von Spann- $\varnothing$  12 bis 400 mm
- Außenspannung: von Spann- $\varnothing$  6 bis 400 mm
- Rundläufe ab 2  $\mu\text{m}$ , z. B. Spann- $\varnothing$  34 mm, ab 4  $\mu\text{m}$  wiederholbar
- 0,1 mm Standardhub im Durchmesser bei Spann- $\varnothing$  100 mm
- Axialkomponente der Spannhülsen
- Einfacher Aufbau
- Spannsystem auch für Werkzeugaufnahmen geeignet

## Functional description

Due to the axial application of force, the **clamping sleeves** move in the direction of the force and expand radially. This eliminates the play between the clamping sleeves and the base body on the one hand, and between the clamping sleeves and the workpiece on the other. The workpiece is clamped.

## Advantages

- Thorough know-how due to licensed production since 1950
- No clamping marks thanks to closed clamping cover
- Clamping of various diameters in different clamping levels

## Features

- Internal clamping: from clamping dia. 12 to 400 mm
- External clamping: from clamping dia. 6 to 400 mm
- Run-out from 2  $\mu\text{m}$ , e.g. clamping dia. 34 mm, from 4  $\mu\text{m}$  repeatable
- 0.1 mm standard stroke in diameter with clamping dia. 100 mm
- Axial component of the clamping sleeves
- Simple design
- Clamping system also suitable for tool holders

## Spannsystem SK

## Clamping System SK

### Funktionsbeschreibung

Das Spannelement besteht aus im Grundkörper hochgenau geführten **keilförmigen Backen**. Durch eine axiale Kraftbeaufschlagung werden diese über einen ebenfalls keilförmigen Betätigungsring radial verschoben. Das Werkstück wird gespannt. Die Anzahl der Spannbacken kann hier je nach Anwendung durchaus von 2 bis 20 Stück variieren.

### Vorteile

- Großer Spannhub ermöglicht Hinterschneidung
- Konturanpassung durch variable Spannbackenanzahl

### Merkmale

- Innenspannung: von Spann- $\varnothing$  20 bis 100 mm
- Außenspannung: von Spann- $\varnothing$  15 bis 100 mm
- Rundläufe ab 12  $\mu$ m, z. B. Spann- $\varnothing$  28 mm, ab 12  $\mu$ m wiederholbar
- 5 mm Standardhub im Durchmesser bei Spann- $\varnothing$  100 mm
- Keine Axialkomponente der Spannbacken

### Functional description

The clamping element consists of **wedge-shaped jaws** guided with high precision in the base body. By applying an axial force, these jaws are radially displaced via a likewise wedge-shaped actuating ring. The workpiece is clamped. The number of clamping jaws can vary from 2 to 20 depending on the application.

### Advantages

- Large clamping stroke enables undercuts
- Adaptation to contour due to variable number of clamping jaws

### Features

- Internal clamping: from clamping dia. 20 to 100 mm
- External clamping: from clamping dia. 15 to 100 mm
- Run-out from 12  $\mu$ m, e.g. clamping dia. 28 mm, from 12  $\mu$ m repeatable
- 5 mm standard stroke in diameter with clamping dia. 100 mm
- No axial component of the clamping jaws

## Spannsystem SH

## Clamping System SH

### Funktionsbeschreibung

Meist handelt es sich hierbei um ein **geschlossenes Hydrauliksystem**, das im Vakuum mit Öl befüllt wird. Durch die Betätigung eines Kolbens wird das Kammer-system mit hohem Druck beaufschlagt. Dieser weitet die dünnwandige Dehnbuchse radial auf und spannt somit das Werkstück im vorgegebenen Spannbereich.

### Vorteile

- Wenige mechanische Verschleißteile
- Kostengünstige Spannelemente bei höchster Genauigkeit
- Hohe und oberflächenschonende Spannkraft

### Merkmale

- Innenspannung: von Spann- $\varnothing$  6 bis 250 mm
- Außenspannung: von Spann- $\varnothing$  5 bis 200 mm
- Rundläufe ab 2  $\mu$ m, z. B. Spann- $\varnothing$  20 mm, ab 3  $\mu$ m wiederholbar
- 0,050 mm Standardhub im Durchmesser bei Spann- $\varnothing$  100 mm
- Verschmutzungsunempfindlich
- Einfacher Aufbau
- Extrem dünnwandige Spannlösungen realisierbar

### Functional description

This is usually a **closed hydraulic system** that is filled with oil in a vacuum. By actuating a piston, high pressure is applied to the chamber system. This expands the thin-walled expansion bush radially and thus clamps the workpiece in the specified clamping range.

### Advantages

- Few mechanical wear parts
- Cost-effective clamping elements with highest accuracy
- High and surface-friendly clamping forces

### Features

- Internal clamping: from clamping dia. 6 to 250 mm
- External clamping: from clamping dia. 5 to 200 mm
- Run-out from 2  $\mu$ m, e.g. clamping dia 20 mm, from 3  $\mu$ m repeatable
- 0.050 mm standard stroke in diameter with clamping dia. 100 mm
- Highly resistant to soiling
- Simple design
- Extremely thin-walled clamping solutions can be realised

**Hinweis:**

Die allgemeinen Geschäftsbedingungen können Sie bei der für Sie zuständigen Landesvertretung anfordern.

**Please note:**

If you want specific General Sales Conditions for your own country, please ask your local contact.

**I. Allgemeines**

1. Allen Lieferungen und Leistungen liegen diese Bedingungen sowie etwaige gesonderte vertragliche Vereinbarungen zugrunde. Abweichende Einkaufsbedingungen des Bestellers werden auch durch Auftragsannahme nicht Vertragsinhalt.

Ein Vertrag kommt – mangels besonderer Vereinbarung – mit der schriftlichen Auftragsbestätigung des Lieferanten zustande.

2. Der Lieferer behält sich an Mustern, Kosten- voranschlägen, Zeichnungen u.ä. Informationen körperlicher und unkörperlicher Art – auch in elektronischer Form – Eigentums- und Urheberrechte vor; sie dürfen Dritten nicht zugänglich gemacht werden. Der Lieferer verpflichtet sich, vom Besteller als vertraulich bezeichnete Informationen und Unterlagen nur mit dessen Zustimmung Dritten zugänglich zu machen.
3. Muster werden nur gegen Berechnung geliefert.
4. Mündliche Nebenabreden bestehen nicht. Änderungen bedürfen der Schriftform.

**II. Preis und Zahlung**

1. Die Preise gelten mangels besonderer Vereinbarung ab Werk einschließlich Verladung im Werk, jedoch ausschließlich Verpackung und Entladung. Zu den Preisen kommt die Umsatzsteuer in der jeweiligen gesetzlichen Höhe hinzu.
2. Mangels besonderer Vereinbarung ist die Zahlung sofort nach Lieferung und ohne jeden Abzug á Konto des Lieferanten zu leisten. Berechnet wird die jeweilige Liefermenge.
3. Das Recht, Zahlungen zurückzuhalten, steht dem Besteller nur insoweit zu, als seine Gegenansprüche unbestritten oder rechtskräftig festgestellt sind.
4. Das Recht des Bestellers, mit Gegenansprüchen aus anderen Rechtsverhältnissen aufzurechnen, steht ihm nur insoweit zu, als sie unbestritten oder rechtskräftig festgestellt sind.

**III. Lieferzeit, Lieferverzögerung**

1. Die Lieferzeit ergibt sich aus den Vereinbarungen der Vertragsparteien. Ihre Einhaltung durch den Lieferer setzt voraus, dass alle

kaufmännischen und technischen Fragen zwischen den Vertragsparteien geklärt sind und der Besteller alle ihm obliegenden Verpflichtungen, wie z.B. Beibringung der erforderlichen behördlichen Bescheinigungen oder Genehmigungen oder die Leistung einer Anzahlung erfüllt hat. Ist dies nicht der Fall, so verlängert sich die Lieferzeit angemessen. Dies gilt nicht, soweit der Lieferer die Verzögerung zu vertreten hat.

2. Die Einhaltung der Lieferzeit steht unter dem Vorbehalt richtiger und rechtzeitiger Selbstbelieferung. Sich abzeichnende Verzögerungen teilt der Lieferer sobald als möglich mit.
3. Die Lieferzeit ist eingehalten, wenn der Liefergegenstand bis zu ihrem Ablauf das Werk des Lieferanten verlassen hat oder die Versandbereitschaft gemeldet ist. Soweit eine Abnahme zu erfolgen hat, ist – außer bei berechtigter Abnahmeverweigerung – der Abnahmetermin maßgebend, hilfsweise die Meldung der Abnahmebereitschaft.
4. Werden der Versand bzw. die Abnahme des Liefergegenstandes aus Gründen verzögert, die der Besteller zu vertreten hat, so werden ihm, beginnend einen Monat nach Meldung der Versand- bzw. der Abnahmebereitschaft, die durch die Verzögerung entstandenen Kosten berechnet. Wird der Versand auf Wunsch des Bestellers verzögert, so ist der Lieferer berechtigt, nach Setzung und fruchtlosem Ablauf einer angemessenen Frist, anderweitig über den Liefergegenstand zu verfügen und den Besteller mit angemessen verlängerter Frist zu beliefern.
5. Ist die Nichteinhaltung der Lieferzeit auf höhere Gewalt, auf Arbeitskämpfe oder sonstige Ereignisse, die außerhalb des Einflussbereiches des Lieferanten liegen, zurückzuführen, so verlängert sich die Lieferzeit angemessen. Der Lieferer wird dem Besteller den Beginn und das Ende derartiger Umstände baldmöglichst mitteilen.

6. Der Besteller kann ohne Fristsetzung vom Vertrag zurücktreten, wenn dem Lieferer die gesamte Leistung vor Gefahrübergang endgültig unmöglich wird. Der Besteller kann darüber hinaus vom Vertrag zurücktreten, wenn bei einer Bestellung die Ausführung eines Teils der Lieferung unmöglich wird und er ein berechtigtes Interesse an der Ablehnung der Teillieferung hat. Ist dies nicht

der Fall, so hat der Besteller den auf die Teillieferung entfallenen Vertragspreis zu zahlen. Dasselbe gilt bei Unvermögen des Lieferanten. Im Übrigen gilt Abschnitt VIII.2. Tritt die Unmöglichkeit oder das Unvermögen während des Annahmeverzuges ein oder ist der Besteller für diese Umstände allein oder weit überwiegend verantwortlich, bleibt er zur Gegenleistung verpflichtet.

7. Kommt der Lieferer in Verzug und erwächst dem Besteller hieraus ein Schaden, so ist er berechtigt, eine pauschale Verzugsentschädigung zu verlangen. Sie beträgt für jede volle Woche der Verspätung 0,5 %, im Ganzen aber höchstens 5 % vom Wert desjenigen Teils der Gesamtlieferung, der infolge der Verspätung nicht rechtzeitig oder nicht vertragsgemäß genutzt werden kann. Setzt der Besteller dem Lieferer – unter Berücksichtigung der gesetzlichen Ausnahmefälle – nach Fälligkeit eine angemessene Frist zur Leistung und wird die Frist nicht eingehalten, ist der Besteller im Rahmen der gesetzlichen Vorschriften zum Rücktritt berechtigt. Er verpflichtet sich, auf Verlangen des Lieferanten in angemessener Frist zu erklären, ob er von seinem Rücktrittsrecht Gebrauch macht. Weitere Ansprüche aus Lieferverzug bestimmen sich ausschließlich nach Abschnitt VII. 2 dieser Bedingungen.

**IV. Gefahrübergang, Abnahme**

1. Die Gefahr geht auf den Besteller über, wenn der Liefergegenstand das Werk verlassen hat, und zwar auch dann, wenn Teillieferungen erfolgen oder der Lieferer noch andere Leistungen, z.B. die Versandkosten oder Anlieferung und Aufstellung, übernommen hat. Soweit eine Abnahme zu erfolgen hat, ist diese für den Gefahrübergang maßgebend. Sie muss unverzüglich zum Abnahmetermin, hilfsweise nach der Meldung des Lieferanten über die Abnahmebereitschaft durchgeführt werden. Der Besteller darf die Abnahme bei Vorliegen eines nicht wesentlichen Mangels nicht verweigern.
2. Verzögert sich oder unterbleibt der Versand bzw. die Abnahme infolge von Umständen, die dem Lieferer nicht zuzurechnen sind, geht die Gefahr vom Tage der Meldung der Versand bzw. Abnahmebereitschaft auf den Besteller über. Der Lieferer verpflichtet sich, auf Kosten des Bestellers die Versicherungen abzuschließen, die dieser verlangt.

3. Teillieferungen sind zulässig, soweit für den Besteller zumutbar.

## V. Eigentumsvorbehalt

1. Der Lieferer behält sich das Eigentum an dem Liefergegenstand vor, bis sämtliche Forderungen des Lieferers gegen den Besteller aus der Geschäftsverbindung einschließlich der künftig entstehenden Forderungen, auch aus gleichzeitig oder später abgeschlossenen Verträgen, beglichen sind. Dies gilt auch dann, wenn einzelne oder sämtliche Forderungen des Lieferers in eine laufende Rechnung aufgenommen wurden und der Saldo gezogen und anerkannt ist.

Bei vertragswidrigem Verhalten des Bestellers insbesondere bei Zahlungsverzug, ist der Lieferer zur Rücknahme des Liefergegenstandes nach Mahnung berechtigt und der Besteller zur Herausgabe verpflichtet.

Auf Grund des Eigentumsvorbehalts kann der Lieferer den Liefergegenstand nur herausverlangen, wenn er vom Vertrag zurückgetreten ist. Bei Pfändungen oder sonstigen Eingriffen Dritter hat der Besteller den Lieferer unverzüglich zu benachrichtigen.

2. Der Besteller ist berechtigt, den Liefergegenstand im ordentlichen Geschäftsgang weiter zu veräußern. Er tritt jedoch dem Lieferer bereits jetzt alle Forderungen ab, die ihm aus der Weiterveräußerung gegen den Abnehmer oder gegen Dritte erwachsen.

Zur Einziehung dieser Forderungen ist der Besteller auch nach der Abtretung ermächtigt. Die Befugnis des Lieferers, die Forderungen selbst einzuziehen, bleibt hiervon unberührt.

Die Einziehungsbefugnis erlischt, wenn

- a. der Besteller mit seinen Zahlungsverpflichtungen gegenüber dem Lieferer in Verzug gerät oder
- b. sie widerrufen ist oder
- c. ein Antrag auf Eröffnung eines Insolvenzverfahrens gestellt ist.

Der Lieferer kann dann verlangen, dass der Besteller ihm die abgetretenen Forderungen und deren Schuldner bekannt gibt, alle zum Einzug erforderlichen Angaben macht, die dazugehörigen Unterlagen aushändigt und den Schuldner die Abtretung mitteilt, soweit nicht bereits durch den Lieferer geschehen.

Wird der Liefergegenstand zusammen mit anderen Waren, die dem Lieferanten nicht gehören, weiterveräußert, gilt die Forderung des Bestellers gegen den Abnehmer in Höhe des zwischen Lieferer und Besteller vereinbarten Lieferpreises als abgetreten.

3. Der Besteller darf den Liefergegenstand weder verpfänden noch zur Sicherheit übereignen.
4. Der Lieferer ist berechtigt, den Liefergegenstand auf Kosten des Bestellers gegen Diebstahl, Bruch-, Feuer-, Wasser- und sonstige Schäden zu versichern, sofern nicht der Besteller selbst die Versicherung nachweislich abgeschlossen hat.
5. Wird im Zusammenhang mit der Bezahlung des Kaufpreises durch den Besteller eine wechselseitige Haftung des Lieferers begründet, so erlöschen der Eigentumsvorbehalt, einschließlich seiner vereinbarten Sonderformen, oder sonstige zur Zahlungssicherung vereinbarte Sicherheiten nicht vor Einlösung des Wechsels durch den Besteller als Bezogenem.

## VI. Mängelansprüche

Für Sach- und Rechtsmängel der Lieferung haftet der Lieferer unter Ausschluss weiterer Ansprüche – vorbehaltlich Abschnitt VII – wie folgt:

### Sachmängel

1. Alle diejenigen Teile sind nach Wahl des Lieferers nachzubessern oder mangelfrei zu ersetzen, die sich infolge eines vor dem Gefahrübergang liegenden Umstandes als mangelhaft herausstellen.  
  
Die Feststellung solcher Mängel ist dem Lieferer unverzüglich schriftlich anzuzeigen. Ersetzte Teile werden Eigentum des Lieferers.
2. Zur Vornahme aller dem Lieferer notwendig erscheinenden Nachbesserungen und Ersatzlieferungen hat der Besteller nach Verständigung mit dem Lieferer diesem die erforderliche Zeit und Gelegenheit zu geben; andernfalls ist der Lieferer von der Haftung für die daraus entstehenden Folgen befreit. Nur in dringenden Fällen der Gefährdung der Betriebssicherheit bzw. zur Abwehr unverhältnismäßig großer Schäden, wobei der Lieferer sofort zu verständigen ist, hat der Besteller das Recht, den Mangel selbst oder durch Dritte beseitigen zu lassen und vom Lieferer Ersatz der erforderlichen Aufwendungen zu verlangen.
3. Der Lieferer trägt – soweit sich die Beanstandung als berechtigt herausstellt – die zum Zwecke der Nacherfüllung erforderlichen Aufwendungen, soweit hierdurch keine unverhältnismäßige Belastung des Lieferers eintritt. Soweit sich die Aufwendungen dadurch erhöhen, dass der Käufer die Kaufsache nach Ablieferung an einen anderen Ort als den Erfüllungsort verbracht hat, sind dadurch entstehende Mehrkosten

vom Käufer zu tragen. Der Lieferer ersetzt bei dem Verkauf einer neu hergestellten Sache außerdem im Umfang seiner gesetzlichen Verpflichtungen die vom Besteller geleisteten Aufwendungen im Rahmen von Rückgriffsansprüchen in der Lieferkette.

4. Der Besteller hat im Rahmen der gesetzlichen Vorschriften ein Recht zum Rücktritt vom Vertrag, wenn der Lieferer – unter Berücksichtigung der gesetzlichen Ausnahmefälle – eine ihm gesetzte angemessene Frist für die Nachbesserung oder Ersatzlieferung wegen eines Sachmangels fruchtlos verstreichen lässt. Liegt nur ein unerheblicher Mangel vor, steht dem Besteller lediglich ein Recht zur Minderung des Vertragspreises zu. Das Recht auf Minderung des Vertragspreises bleibt ansonsten ausgeschlossen.
5. Weitere Ansprüche bestimmen sich ausschließlich nach Abschnitt VII.2. dieser Bedingungen.
6. Keine Haftung wird insbesondere in folgenden Fällen übernommen:

Ungeeignete oder unsachgemäße Verwendung, fehlerhafte Montage bzw. Inbetriebsetzung durch den Besteller oder Dritte, natürliche Abnutzung, fehlerhafte oder nachlässige Behandlung, nicht ordnungsgemäße Wartung, ungeeignete Betriebsmittel, mangelhafte Bauarbeiten, ungeeigneter Baugrund, chemische, elektrochemische oder elektrische Einflüsse – sofern sie nicht vom Lieferer zu verantworten sind.

Für Mängel des vom Besteller angelieferten Materials haftet der Lieferer nur, wenn er bei Anwendung fachmännischer Sorgfalt die Mängel hätte erkennen müssen. Bei Fertigung nach Zeichnung des Bestellers haftet der Lieferer nur für die zeichnungsmäßige Ausführung.

Werden Sonderwerkzeuge in Auftrag gegeben, so darf die Bestellmenge um 10 %, mindestens jedoch um 2 Stück über- oder unterschritten werden.

7. Bessert der Besteller oder ein Dritter unsachgemäß nach, besteht keine Haftung des Lieferers für die daraus entstehenden Folgen. Gleiches gilt für ohne vorherige Zustimmung des Lieferers vorgenommene Änderungen des Liefergegenstandes.

### Rechtsmängel

8. Führt die Benutzung des Liefergegenstandes zur Verletzung von gewerblichen Schutzrechten oder Urheberrechten im Inland, wird der Lieferer auf seine Kosten dem Besteller grundsätzlich das Recht zum weiteren Gebrauch verschaffen oder den

Liefergegenstand in für den Besteller zumutbarer Weise derart modifizieren, dass die Schutzrechtsverletzung nicht mehr besteht.

Ist dies zu wirtschaftlich angemessenen Bedingungen oder in angemessener Frist nicht möglich, ist der Besteller zum Rücktritt vom Vertrag berechtigt. Unter den genannten Voraussetzungen steht auch dem Lieferer ein Recht zum Rücktritt vom Vertrag zu.

Darüber hinaus wird der Lieferer den Besteller von unbestrittenen oder rechtskräftig festgestellten Ansprüchen der betreffenden Schutzrechtsinhaber freistellen.

9. Die in Abschnitt VI.8. genannten Verpflichtungen des Lieferers sind vorbehaltlich Abschnitt VII.2. für den Fall der Schutz oder Urheberrechtsverletzung abschließend.

Sie bestehen nur, wenn

- a. der Besteller den Lieferer unverzüglich von geltend gemachten Schutz- oder Urheberrechtsverletzungen unterrichtet,
- b. der Besteller den Lieferer in angemessenem Umfang bei der Abwehr der geltend gemachten Ansprüche unterstützt bzw. dem Lieferer die Durchführung der Modifizierungsmaßnahmen gemäß Abschnitt VI.8. ermöglicht,
- c. dem Lieferer alle Abwehrmaßnahmen einschließlich außergerichtlicher Regelungen vorbehalten bleiben,
- d. der Rechtsmangel nicht auf einer Anweisung des Bestellers beruht und
- e. die Rechtsverletzung nicht dadurch verursacht wurde, dass der Besteller den Liefergegenstand eigenmächtig geändert oder in einer nicht vertragsgemäßen Weise verwendet hat.

10. Der Besteller übernimmt für die von ihm beizubringenden Unterlagen, wie Zeichnungen, Lehren, Muster oder dgl., die alleinige Verantwortung. Der Besteller hat dafür einzustehen, dass von ihm vorgelegte Ausführungszeichnungen in Schutzrechte Dritter nicht eingreifen. Der Lieferer ist dem Besteller gegenüber nicht zur Prüfung verpflichtet, ob durch die Abgabe von Angeboten auf Grund ihm eingesandter Ausführung irgendwelche Schutzrechte Dritter verletzt werden. Ergibt sich trotzdem aus anspruchsbegründenden Tatsachen eine Haftung des Lieferers, so hat der Besteller ihn schadlos zu halten.

## VII. Haftung des Lieferers, Haftungsausschluss

1. Wenn der Liefergegenstand infolge vom Lieferer schuldhaft unterlassener oder fehlerhafter Vorschläge oder Beratungen,

die vor oder nach Vertragsschluss erfolgten, oder durch die schuldhaft Verletzung anderer vertraglicher Nebenverpflichtungen – insbesondere Anleitung für Bedienung und Wartung des Liefergegenstandes – vom Besteller nicht vertragsgemäß verwendet werden kann, so gelten unter Ausschluss weiterer Ansprüche des Bestellers die Regelungen der Abschnitte VI und VII.2.

2. Für Schäden, die nicht am Liefergegenstand selbst entstanden sind, haftet der Lieferer – aus welchen Rechtsgründen auch immer – nur
  - a. bei Vorsatz und grober Fahrlässigkeit,
  - b. bei schuldhafter Verletzung von Leben, Körper, Gesundheit,
  - c. bei Mängeln, die er arglistig verschwiegen hat,
  - d. im Rahmen einer Garantiezusage,
  - e. bei Mängeln des Liefergegenstandes, soweit nach Produktionshaftungsgesetz für Personen- oder Sachschäden an privat genutzten Gegenständen gehaftet wird.

Bei schuldhafter Verletzung wesentlicher Vertragspflichten haftet der Lieferer auch bei einfacher Fahrlässigkeit, allerdings begrenzt auf den vertragstypischen, vernünftigerweise vorhersehbaren Schaden.

Weitere Ansprüche sind ausgeschlossen.

## VIII. Verjährung

Alle Ansprüche des Bestellers – aus welchen Rechtsgründen auch immer – verjähren in 12 Monaten; dies gilt auch für die Verjährung von Rückgriffsansprüchen in der Lieferkette gem. § 445 b Abs. 1 BGB, sofern der letzte Vertrag in dieser Lieferkette kein Verbrauchsgüterkauf ist. Die Ablaufhemmung aus § 445 b Abs. 2 BGB bleibt unberührt. Für Schadensersatzansprüche nach Abschnitt VII.2. a-c und e gelten die gesetzlichen Fristen. Sie gelten auch für Mängel eines Bauwerks oder für Liefergegenstände, die entsprechend ihrer üblichen Verwendungsweise für ein Bauwerk verwendet wurden und dessen Mangelhaftigkeit verursacht haben.

## IX. Softwarenutzung

Soweit im Lieferumfang Software enthalten ist, wird dem Besteller ein nicht ausschließliches Recht eingeräumt, die gelieferte Software einschließlich ihrer Dokumentationen zu nutzen.

Sie wird zur Verwendung auf dem dafür bestimmten Liefergegenstand überlassen. Eine Nutzung der Software auf mehr als einem System ist untersagt.

Der Besteller darf die Software nur im gesetzlich zulässigen Umfang (§§ 69 a ff. UrhG) vervielfältigen, überarbeiten, übersetzen oder von dem Objektcode in den Quellcode umwandeln. Der Besteller verpflichtet sich, Herstellerangaben – insbesondere Copyright-Vermerke – nicht zu entfernen oder ohne vorherige ausdrückliche Zustimmung des Lieferers zu verändern.

Alle sonstigen Rechte an der Software und den Dokumentationen einschließlich der Kopien bleiben beim Lieferer bzw. beim Softwarelieferanten. Die Vergabe von Unterlizenzen ist nicht zulässig.

## X. Anwendbares Recht, Gerichtsstand

1. Für alle Rechtsbeziehungen zwischen dem Lieferer und dem Besteller gilt ausschließlich das für die Rechtsbeziehungen inländischer Parteien untereinander maßgebliche Recht der Bundesrepublik Deutschland.
2. Gerichtsstand ist das für den Sitz des Lieferers zuständige Gericht. Der Lieferer ist jedoch berechtigt, am Hauptsitz des Bestellers Klage zu erheben.

## XI. Besondere Bedingungen für Bearbeitungsverträge (Fertigstellung, Aufarbeitung, Umarbeitung oder Wiederherstellung von Werkzeugen)

Ergänzend zu oder abweichend von den Lieferbedingungen gilt für Bearbeitungsverträge:

1. Für das Verhalten des an den Bearbeiter eingesandten Materials übernimmt dieser keine Haftung. Sein Anspruch auf Vergütung bleibt unberührt.
2. Wird das Material bei der Bearbeitung durch Verschulden des Bearbeiters unbrauchbar, entfällt sein Vergütungsanspruch.

Der Schadensersatzanspruch des Bestellers richtet sich nach Abschnitt VII.2. der Lieferbedingungen.
