# HOW TO READ THE STANDARD OF EXTERNAL TURNING TOOLS

- How this section page is organised
- ①Organised according to turning insert shape.  
(Refer to the index on the next page.)

## TYPE OF TOOL HOLDER

Indicates the first four letters of the order number, as well as cutting applications.

## TITLE OF PRODUCT BY INSERT TYPE

## PRODUCT SECTION

**EXTERNAL TURNING TOOLS**

**VN** **INSERTS**  
**TOOL HOLDERS**

**DVNN** External turning, Copying **DOUBLE CLAMP type**

| Order Number | Stock | Insert Number | Dimensions (mm) |    |     |    | Shim | Shim Pre | Lock Pin | Lock Screw | Stop Ring | Wrench |
|--------------|-------|---------------|-----------------|----|-----|----|------|----------|----------|------------|-----------|--------|
|              |       |               | H               | B  | LF  | HF |      |          |          |            |           |        |
| DVNN2020K16  | ●     | VN A 1604     | 20              | 20 | 125 | 44 | 20   | 10       | DC5020   | LLP13      | DC5020    | TKY19F |

\*1 Clamp Torque (N·m) : DC05201~3.5

**PVNN** External turning, Copying **MP type**

| Order Number | Stock | Insert Number | Dimensions (mm) |    |     |    | Shim | Lock Pin | Lock Screw    | Stop Ring | Wrench    |     |        |
|--------------|-------|---------------|-----------------|----|-----|----|------|----------|---------------|-----------|-----------|-----|--------|
|              |       |               | H               | B  | LF  | HF |      |          |               |           |           |     |        |
| PVNN2020K16  | ●     | VN A 1604     | 20              | 20 | 125 | 38 | 20   | 10       | PV322 (PV321) | P115      | HSP05008C | E03 | HKY25R |
| PVNN2525M16  | ●     | VN M 1604     | 25              | 25 | 150 | 38 | 25   | 12.5     | PV323         | P115      | HSP05008C | E03 | HKY25R |

\*1 Clamp Torque (N·m) : HSP05008C>2.5  
\*2 Please use shim no. PV321 and PV323 with RE0.4mm and RE1.2mm thick inserts. When using inserts, shim should be ordered separately.

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

**LEGEND FOR STOCK STATUS MARK**  
Is shown on the left hand page of each double-page spread.

**PRODUCT STANDARDS**  
Indicates order numbers, stock status (per right/left hand), applicable inserts, dimensions, and spare parts.

**REFERENCE PAGE FOR APPLICABLE INSERTS**  
Indicates reference pages giving details of inserts that are applicable to the product.

**PAGE REFERENCE**  
· SPARE PARTS  
· TECHNICAL DATA  
Indicates reference pages, including the above, on the right hand page of each double-page spread.

**FIGURE SHOWING THE TOOLING APPLICATION**  
Uses illustrations and arrows to depict the available machining applications such as external turning, copying, facing, and chamfering together with cutting edge lead angles.

\* Clamp Torque (N · m) : LLCS106=2.2, LLCS108=3.3, LLCS508=3.3, LLCS310=7.0

Note 1) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\*1 Clamp Torque (N · m) : DC0520T=3.5, DC0621T=5.0

\*2 Please use shim no. LLSCN33 with 3.18mm thick inserts. When using 3.18mm thick inserts, the shim should be ordered separately.

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 2) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\* Clamp Torque (N • m) : LS25=8.2

Note 1) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\*1 Clamp Torque (N · m) : DC0520T=3.5, DC0621T=5.0

\*2 Please use shim no. LLSDN42 with 6.35mm thick inserts. When using 6.35mm thick inserts, the shim should be ordered separately.

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 2) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\*1 Clamp Torque (N • m) : LLCS108=3.3

\*2 Please use shim no. LLSDN42 with 6.35mm thick inserts. When using 6.35mm thick inserts, the shim should be ordered separately.

Note 1) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\* Clamp Torque (N • m) : LLCS105=1.5, LLCS106=2.2, LLCS108=3.3, LLCS508=3.3, LLCS310=7.0

Note 1) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

**MSBN**

**External turning DOUBLE CLAMP type**  
For heavy cutting

Right hand tool holder only.

\* Clamp Torque (N • m) : LLCS106=2.2, LLCS108=3.3, LLCS508=3.3, LLCS310=7.0

Note 1) When facing or chamfering only and using insert with right or left hand chipbreaker, please use left hand insert for right hand holder and right hand insert for left hand holder.

Note 2) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\* Clamp Torque (N · m) : LS25=8.2

Note 1) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

EXTERNAL TURNING TOOLS

**PSDN**

External turning,  
Chamfering

**LL type**

Neutral tool holder only.

\*2 Please use shim no. LLSTN33 and shim pin no. LLP23 with 3.18mm thick inserts. When using 3.18mm thick inserts, the shim and shim pin should be ordered separately.

Note 1) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\*1 Clamp Torque (N · m) : DC0520T=3.5

\*2 Please use shim no. LLSTN33 with 3.18mm thick inserts. When using 3.18mm thick inserts, the shim should be ordered separately.

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 2) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\*1 Clamp Torque (N · m) : LLCS106=2.2, LLCS206=2.2, LLCS108=3.3

\*2 Please use shim no. LLSTN33 and shim pin no. LLP23 with 3.18mm thick inserts. When using 3.18mm thick inserts, the shim should be ordered separately.

Note 1) When using inserts with right or left hand chipbreakers, please use left hand inserts for right hand holders and right hand inserts for left hand holders.

Note 2) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\*1 Clamp Torque (N · m) : SLCS105=7.0, SLCS106=7.0

\*2 HKY25R, HKY30R Wrench for Shim Pin, HKY40R Wrench for Clamp Screw.

Note 1) When facing only and using inserts with right or left hand chipbreakers, please use left hand inserts for right hand holders and right hand inserts for left hand holders.

Note 2) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 3) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\*1 Clamp Torque (N · m) : HSP05008C=2.5

\*2 Please use shim no. PV321 and PV323 with RE0.4mm and RE1.2mm thick inserts. When using inserts, shim should be ordered separately.

\*1 Clamp Torque (N · m) : HSP05008C=2.5

\*2 Please use shim no. PV321 and PV323 with RE0.4mm and RE1.2mm thick inserts. When using inserts, shim should be ordered separately.

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

\*1 Clamp Torque (N • m) : DC0520T=3.5, DC0621T=5.0

\*2 Please use shim no. LLSWN32 with 4.76mm thick inserts. When using 4.76mm thick inserts, the shim should be ordered separately.

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 2) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\* Clamp Torque (N · m) : TS25=1.0, TS43=3.5, TS44=3.5

Note 1) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

\* Clamp Torque (N • m) : TS44=3.5

Note 1) When using an insert with a corner radius  $R \geq 1.6$  mm, and dependant on the machined diameter and form, there is a risk the standard shim may interfere with the workpiece. Replace the shim so the maximum corner radius of the shim is positioned under the cutting edge.

## APPLICABLE RANGE

## RECOMMENDED CUTTING CONDITIONS

|          | Material                  | Hardness    | Grade         | Cutting Speed (m/min) |
|----------|---------------------------|-------------|---------------|-----------------------|
| <b>P</b> | Mild Steel                | ≤180HB      | <b>UE6020</b> | 250 (150—350)         |
|          | Carbon Steel, Alloy Steel | 150HB—250HB | <b>UE6020</b> | 175 (100—250)         |
| <b>M</b> | Stainless Steel           | ≤200HB      | <b>VP15TF</b> | 100 (70—120)          |

Note 1) The above cutting conditions are general guidelines.

Adjustments may be necessary depending on machine rigidity, workpiece geometry and clamping.

Note 2) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

● : Inventory maintained.

## NOTE

### When end face copying

Pay special attention to the following when face copying.

Depth from end face  
Up to 10mm

#### ●Machining of an outer diameter (Step ①)

- To prevent burr formation, the depth of cut should be below half the nose radius.

#### ●Machining of an inclination (Step ②)

- To reduce the contact length of chips, the depth of cut should be below half the nose radius.
- To prevent interference between the tool and the workpiece, the cutting diameter should be 40mm or larger, inclination angle 60° or less and depth from the end face up to 10mm.

#### ●When changing inserts

- When indexing the inserts, it is recommended to preset the cutting edge position to maintain machining accuracy.

### Not possible

#### ●Machining of V-pulleys

When machining V-pulleys,  
use a VNMG insert.

# OUTLINE OF SMALL TOOLS

TOOLS FOR GANG TYPE AUTOMATIC LATHES (FOR EXTERNAL TURNING AND BORING)

PVD Coated Cemented Carbide Grade for Carbon Steel

## MS6015

Ideal for turning pure iron, carbon and free cutting steels, and for achieving good surface finishes plus excellent dimensional accuracy.

|                                 | <b>MS6015</b>   | Conventional |
|---------------------------------|-----------------|--------------|
| Coating                         | TiCN multilayer | TiAlN        |
| Hardness (HV)                   | 3,000           | 2,800        |
| Wear Coefficient (Carbon Steel) | Low             | High         |
| Base Material Hardness (HRA)    | 92.0            | 92.0         |

Ti-C-N Multilayer Coating

Superior wear and welding resistance and demonstrating the best possible results for machining carbon steel.

## MS7025 NEW

Dramatically improved welding and wear resistance in low feed machining with a more precise nano-multilayer coating

By combining the high lubrication layer with excellent welding resistance, and the high hardness layer with a greater wear resistance that suppresses the progress of wear at the nano-level, the film damage is significantly reduced and the welding and wear resistance are dramatically improved.

Conventional Multilayer Coating

Nano-multilayer Coating

PVD Coated Grade for High Precision and Small Parts Machining

## MS9025

Effective reduction of notch wear with a balance of wear and fracture resistance.

**Improved Cemented Carbide**

Thermal conductivity has been improved by optimising the grain size and therefore reducing the boundary contact between the WC particles. This optimisation reduces the temperature of the cutting edge during machining.

**MS9025**

Reducing the cutting edge temperature by improved thermal conductivity.

Conventional

Higher cutting edge temperatures due to more particle boundary contact.

### ● Moulded chipbreaker insert

Nose radii designed with minus tolerance

- Suitable for small parts applications that often require minus tolerance dimensions.
- The order number is shown with the letter "M" that indicates minus tolerance. ex. DCGT11T301M-FS
- The radius value is printed on the side of the insert label for easy recognition.

A combination of a curved cutting edge and the protrusion type chipbreaker promotes efficient chip breaking.

FS

FS-P

LS

LS-P

### ● Tolerance Corner R

The letter "M" insert  
RE  $0_{-0.05}$  mm  
(Conventional G-class insert  
RE  $\pm 0.10$  mm)

### ● Cutting Off

### ● Back Turning

Inserts for  
Moulded Back Turning  
**SMB** Breaker

### ● Threading

### ● Back Clamping Mechanism

Screw designed for front and back clamping.

### ● Grooving

- 3 cutting edges
- Groove width 0.3-3.0mm
- Traversing possible

### ● Front Turning

- ISO E class accuracy inserts
- A wide variety of small corner R inserts
- Rake angle 30°

# OUTLINE OF SMALL TOOLS

Grooving System

## GY series

### Monoblock Holder for Swiss-type Automatic Lathe

The new geometry with greatly improved rigidity suppresses vibrations and dimensional changes thereby solves common cutting off problems.

Max. Cut Off Diameter : 34mm

### Overhang Length Compatible with Swiss-type Automatic Lathes

Head length corresponding to the maximum machining diameter of CNC Swiss Type automatic lathes and turret machines.

## Features of High Rigidity Holder

### Strong Clamp Bridge

The strong design of the clamp bridge suppresses chatter and vibration.

### Thicker Tool Base

Tool deflection caused by cutting resistance is greatly reduced.

## Indexable inserts developed under the concept of "high quality, high efficiency and long tool life."

|                 |                                                                                                                    |
|-----------------|--------------------------------------------------------------------------------------------------------------------|
| High Quality    | E class tolerance, sharp cutting edge, high accuracy small corner R, smooth surface finish                         |
| Long Tool Life  | PVD coating<br>MS6015/MS7025/MS9025/VP15TF                                                                         |
| High Efficiency | Regrinding not necessary due to the employment of indexable inserts. A wide variety of top cutting edge geometries |

Cutting Off & Grooving System

## GW series

### Monoblock Holder for Swiss-type Automatic Lathe

Max. Cut Off Diameter : 76mm

### High Rigidity Holder

Tool deflection caused by cutting resistance and the remaining material pip in the centre are greatly reduced.

### New Low Resistance and High Lead Angle Insert

New inserts with a lead angle of 8° have been added to the range to reduce burrs and the size of the remaining pip in the centre of the workpiece after cutting.

Lead Angle 5°

Lead Angle 8°

## TOOLS FOR CAM TYPE AUTOMATIC LATHES

- The most suitable for use with cam type automatic lathes (radial pattern tool posts)
- The most suitable for machining of small parts with work diameter 5mm or smaller
- Single holder for front turning, back turning, grooving, threading and cutting off operations

Front Turning Back Turning Grooving Threading Cutting Off

## INTERNAL TURNING TOOLS

Solid type **MICRO-MINI TWIN**  
Minimum cutting diameter Ø2.2–

Boring  
Grooving  
Threading

Round Shank

Square Shank

## MICRO-DEX Boring Bars

Minimum cutting diameter  
Ø5.0–

Minimum cutting diameter  
Ø10.0

## DIMPLE BAR

(Please see the Boring Bar section for these tools.)

## DRILLING TOOLS

Violet Coated Precision Drills  
**VAPDS/VAPDM** (General)  
(For stainless steel)  
**VAPDSCB**  
(For counter boring)

Solid Carbide Drill

**MVS/DWAE**

Solid Carbide Flat Bottom Drills

**MFE**

Solid Carbide Drills for  
Centreing and Chamfering

**DLE**

Micro Solid Carbide Drills

**MSE** Drills

**MSE/MSP** (Centre Drills)

Solid Gun Drill

Micro Solid Carbide Gun Drill  
with through coolant holes

**MGS**

## END MILLING TOOLS

Solid Carbide End Mill

**MSTAR / MSTAR Plus** End Mill Series

Vibration Control End Mills for  
Machining Difficult-to-Cut Materials

**SMART MIRACLE** End Mill Series

TECHNICAL DATA > P001

This image shows a blank sheet of white paper designed as a memo template. At the top left, the word "Memo" is written in a large, bold, black sans-serif font. A thick horizontal black line runs across the entire width of the page directly beneath the word. The remainder of the page is filled with horizontal dashed gray lines, providing space for writing. The lines are evenly spaced and extend from the left margin to the right edge of the page.

This image shows a blank sheet of white paper designed as a memo template. At the top left, the word "Memo" is written in a large, bold, black sans-serif font. A thick horizontal black line runs across the entire width of the page directly beneath the title. The rest of the page is filled with horizontal dashed gray lines, providing space for writing. The lines are evenly spaced and extend from the left margin to the right edge of the page.

Note 1) Holders with blue colour symbol have an anti-vibration carbide shank. (Micro-dex boring bars are carbide shank only.)

Note 2) l/d represents the ratio of the projection length L to the cutting edge and the shank diameter d.

## ■ DIMPLE BAR

## ■ F TYPE Boring tools

E

BORING BARS

# FEATURES OF DIMPLE BAR

Highly rigid steel shank and a lightweight head configuration. Designed by computer simulation analysis to reduce chatter and improve the vibration damping properties.

Chip disposal is improved by having two channels for chip evacuation.

The lightweight head with its large dimple reduces chatter.

Available in sizes smaller than the ISO standard. Therefore the boring of small diameter holes is possible.

The boring bar has a laser printed scale on the shank to facilitate easy installation.

"F and FS" chipbreakers improve the quality of the surface finish, "MV" chipbreaker offers excellent chip disposal. High wear resistant PCBN inserts are also available for the machining of hardened materials.

E

BORING BARS

## VIBRATION RESISTANCE

### ● DIMPLE BAR

| Weight of the Head | Damping Time |
|--------------------|--------------|
| 49.7g              | 15.8ms       |

By reducing the weight of the head, the damping properties are increased.

### ● Conventional Product

| Weight of the Head | Damping Time |
|--------------------|--------------|
| 70.1g              | 20ms         |

\* The simulation data stated above was conducted with a FSCLP1816R-09A holder, under the following conditions;  $l/d=5$ , depth of cut=0.5mm, and feed=0.05mm/rev.

## How to use CCG/MT•CPG/MT•CPMX•TPG/MX type inserts

By changing the clamp screw, it is possible to use the inserts listed in the table below.

### Holder : FSCLC/P•FSCLC/P...E

| Insert Number       | Clamp Screw           |
|---------------------|-----------------------|
| CCG/MT0602 (Ø6.35)  | Can be used as it is. |
| CPG/MT0802 (Ø7.94)  | Change to TS3         |
| CPG/MT0903 (Ø9.525) | Change to TS4         |
| CPMX0802 (Ø7.94)    | Can be used as it is. |
| CPMX0903 (Ø9.525)   | Can be used as it is. |

### Holder : FSTUP•FSTUP...E

| Insert Number      | Clamp Screw         |
|--------------------|---------------------|
| TPG/MX0802 (Ø4.76) | Change to CS200T    |
| TPG/MX0902 (Ø5.56) | Change to CS250T    |
| TPG/MX1103 (Ø6.35) | Change to CS300890T |

\* If the screw is too long the please shorten as necessary.

Note 1) TPMT/W09, W11 types cannot be used due to a different clamp screw size.

# DIMPLE BAR

- Excellent vibration resistance due to the light dimple head.
- Chip disposal is improved by having two channels for chip evacuation.
- A laser printed scale on the side for easy installation (Steel shank).
- l/d is 3 to 5 times the diameter (Carbide shank is 3 to 8 times the diameter).

\*1 Clamp Torque (N • m) : TS253=1.0, TS3D=2.5, TS4D=3.5

\*2 By changing the clamp screw, it is possible to use the different insert. Please refer to page E006.

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 2) Dimensions shown for insert corner RE 0.4. (Model of ☆ Mark is RE 0.8)

Note 3) When using inserts with a right or left handed chipbreaker, please use left hand inserts for right hand holders and right hand inserts with left hand holders.

# DIMPLE BAR

- Excellent vibration resistance due to the light dimple head.
- Chip disposal is improved by having two channels for chip evacuation.
- A laser printed scale on the side for easy installation (Steel shank).
- l/d is 3 to 5 times the diameter (Carbide shank is 3 to 8 times the diameter).

<sup>☆</sup> Clamp Torque (N • m) : TS25=1.0, TS43=3.5

E

BORING BARS

# BORING BARS

## DIMPLE BAR

- Excellent vibration resistance due to the light dimple head.
- Chip disposal is improved by having two channels for chip evacuation.
- A laser printed scale on the side for easy installation (Steel shank).
- l/d is 3 to 5 times the diameter (Carbide shank is 3 to 8 times the diameter).

\* Clamp Torque (N · m) : TS2=0.6, TS253=1.0, TS4=3.5

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 2) Dimensions shown for insert corner RE 0.4. (Model of ☆1 Mark is RE 0.2, Model of ☆2 Mark is RE 0.8)

Note 3) When using inserts with a right or left handed chipbreaker, please use left hand inserts for right hand holders and right hand inserts with left hand holders.

# BORING BARS

# DIMPLE BAR

- Excellent vibration resistance due to the light dimple head.
- Chip disposal is improved by having two channels for chip evacuation.
- A laser printed scale on the side for easy installation (Steel shank).
- L/d is 3 to 5 times the diameter.

Note 1) When vibrations occur, reduce cutting speed by 30%.

Note 2) The depth of cut needs to be less than the corner diameter when using the FSVJ type.

Note 3) The recommended pressure for the internal coolant is 1MPa.

Note 4) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 5) Dimensions shown for insert corner RE 0.4. (Model of ☆ Mark is RE 0.8)

Note 6) When using inserts with a right or left handed chipbreaker, please use left hand inserts for right hand holders and right hand inserts with left hand holders.

# DOUBLE CLAMP

# DIMPLE BAR

- Economical negative insert.
- Single action type.
- Excellent vibration resistance due to a light dimple head. (With coolant hole.)
- l/d is 3 to 4 times the diameter.

# BORING BARS

## DOUBLE CLAMP

## DIMPLE BAR

- Economical negative insert.
- Single action type.
- Good vibration resistance due to the light dimple head. (With coolant hole)
- l/d is 3 to 4 times the diameter.

# BORING BARS

## MICRO-DEX BORING BARS

- The minimum cutting diameter is from Ø5. ● l/d is 5 times the diameter.
- 5°, 7° positive insert, carbide shank type.
- Easy-to-use tool geometries.
- Suitable for small workpieces.

# BORING BARS

## MICRO-DEX BORING BARS

### STANDARD HOLDER

RBH2200N has a temporary set screw for different machine specifications.  
(Represented by number 4)

RBH15800N, RBH1600N,  
RBH19000N

Note 1) Wet machining is recommended.

Note 2) The recommended tool overhang of CR type is LU+2mm.

# MICRO-MINI TWIN

## ■ PRECAUTIONS WHEN USING THE MICRO-MINI TWIN

● When using a holder for general purpose / small automatic lathe:

- ① To avoid chipping of the 2nd cutting edge take care when inserting the boring bar into the holder. Refer to fig.1. If the 2nd edge contacts the internal face of the holder there is a possibility that it may chip.

- ② When using this type of holder, there is a possibility that damage to the shank and the 2nd cutting edge can occur. Make sure that the clamping screws are tightened to the set torque value. Additionally make sure that there is no clamping screw near the 2nd cutting edge as this can break the boring bar.

◎ When using Mitsubishi Materials holders

When using holders with a tool overhang of recommended quantity, ensure that the 3rd clamping screw is removed prior to machining. (RBH1620N, RBH19020N, RBH2020N and RBH2520N do not have the 3rd screw.) The set torque value for the clamping screw is 2.0 N·m.

● When using a square type holder:

- ① When installing the boring bar into the holder, tighten the clamp screws after ensuring the flats on the tool holder are parallel to the reference flats on the micro-mini bar. Refer to fig.3.  
② Make sure that the clamping screws are tightened to the recommended values.  
③ Do not tighten the clamp screw without a bar in place, otherwise the bridge will be deformed.

E

BORING BARS

## MACHINING METHODS OF THE CR TYPE

### ● Profile turning

By drilling a pre-prepared hole, the machining time will be shortened and chip control will be improved.

<Cutting Conditions>

Workpiece : DIN S20C  
Holder : CR05RS-01B  
Cutting Speed : 80m/min  
Feed : 0.05mm/rev  
Depth of Cut : 0.05mm  
Wet Cutting

Machining a work piece  
without a pre-prepared hole

Machining a work piece  
with a pre-prepared hole

### ● Inner end facing

By drilling a pre-prepared hole, the machining time will be shortened and chip control will be improved.

<Cutting Conditions>

Workpiece : DIN S20C  
Holder : CR05RS-01B  
Cutting Speed : 80m/min  
Feed : 0.05mm/rev  
Depth of Cut : 0.05mm  
Wet Cutting

Machining a work piece  
without a pre-prepared hole

Machining a work piece  
with a pre-prepared hole

## ■ NOTES FOR USE

Profile turning,  
Inner end facing

The cutting edge  
should not be cross  
the centre line of the  
work piece.

If the cutting edge crosses the centre line of a work piece, the cutting edge can fracture.

Copying

The depth of cut  
should be smaller  
than the corner  
radius value.

With depths of cut larger than the corner radius value, burrs will be formed.

\* Clamp Torque (N · m) : C3=2.2, C4=3.3

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 2) Dimensions shown for insert corner RE 0.4. (Model of ☆ Mark is RE 0.8)

Note 3) When using inserts with a right or left handed chipbreaker, please use left hand inserts for right hand holders and right hand inserts with left hand holders.

# BORING BARS

## F TYPE BORING BARS

- The minimum cutting diameter is from Ø5.8.
- 7° positive insert.
- Screw-on type.
- l/d is 3 to 5 times the diameter (Carbide shank is 7 times the diameter).

# BORING BARS

## S TYPE BORING BARS

- The minimum cutting diameter is from Ø11.
- ISO standard.
- 7° positive insert.
- Screw-on type.
- l/d is 3 to 5 times the diameter (Carbide shank is 7 times the diameter).

# BORING BARS

## S TYPE BORING BARS

- The minimum cutting diameter is from Ø11.
- ISO standard.
- 7° positive insert.
- Screw-on type.
- l/d is 3 to 5 times the diameter (Carbide shank is 7 times the diameter).

\* Clamp Torque (N · m) : TS25=1.0, TS4=3.5, TS5=7.5

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 2) Dimensions shown for insert corner RE 0.4. (Model of ☆ Mark is RE 0.8)

Note 3) When using inserts with a right or left handed chipbreaker, please use left hand inserts for right hand holders and right hand inserts with left hand holders.

# S TYPE BORING BARS

- The minimum cutting diameter is from Ø20. ● l/d is 3 to 5 times the diameter (Carbide shank is 7 times the diameter).
- ISO standard.
- 7° positive insert.
- Screw-on type.

# BORING BARS

## S TYPE BORING BARS

- The minimum cutting diameter is from Ø20.
- ISO standard.
- 7° positive insert.
- Screw-on type.
- l/d is 3 to 5 times the diameter (Carbide shank is 7 times the diameter).

\* Clamp Torque (N · m) : TS25=1.0, TS4=3.5

Note 1) The insert photos are only examples. The letters refer to the chipbreaker and the dimension refers to the inscribed circle.

Note 2) Dimensions shown for insert corner RE 0.4. (Model of ☆ Mark is RE 0.8)

Note 3) When using inserts with a right or left handed chipbreaker, please use left hand inserts for right hand holders and right hand inserts with left hand holders.

TECHNICAL DATA

> P001

E037

- The minimum cutting diameter is from Ø25.
- ISO standard.
- Economical negative insert.
- Lever lock type and pin lock type.

\*1 Pin Lock Type : A20QPSKNR/L09, A25RPSKNR/L12  
\*2 Clamp Torque (N・m) : LLCS108S=3.3. HP3T=2.2. HP43=3.3

E

\*1 Pin Lock Type : A20QPTFNR/L16, A25RPTFNR/L16  
\*2 Clamp Torque (N・m) : LLCS106=2.2, LLCS108S=3.3, HP31=2.2, HP33=2.2

Note 3) When using inserts with a right or left handed chipbreaker, please use left hand inserts for right hand holders and right hand inserts with left hand holders.

# BORING BARS

## P TYPE BORING BARS

- The minimum cutting diameter is from Ø20. ● l/d is 3 times the diameter.
- ISO standard.
- Economical negative insert.
- Lever lock type and pin lock type.

# BORING BARS

## M TYPE BORING BARS

- The minimum cutting diameter is from Ø63.
- Negative trigon shape insert.
- Double clamp type.
- l/d is 3 times the diameter.

# AL TYPE BORING BARS

- Suitable for non-ferrous metal.
- 20° positive insert.
- Screw-on type.
- l/d is 6 times the diameter.
- Excellent vibration resistance.
- The minimum cutting diameter is from Ø20.

# **BORING BAR FOR MACHINING SMALL PARTS**

**Overall length compatible with Swiss-Type automatic lathes**

**Carbide Shank : 80 mm, 90 mm, 140 mm, 180 mm**

**Steel Shank : 90 mm, 150 mm**

**Screw-On Type**

**With Coolant Hole**

Some items with a small diameter carbide shank do not have a through coolant hole.

**No Need to Shorten the Shank**

The length of the tools are compatible with Swiss-type automatic lathes, therefore no need to cut the shank to prevent interference.

## FEATURES

### Through Coolant Carbide Shank with Minimum Machining Diameter of 9 mm

The boring bar with a minimum machining diameter of 9mm provides a large clearance and enables excellent chip evacuation.

### Clearance comparison : Hole diameter 11 mm

Boring Bars for small parts machining  
Minimum Machining Diameter of 9 mm

Dimple Bar  
Minimum Machining Diameter of 10 mm

BORING BARS

## Instructions for the use of CPGT · TPG/MX type inserts

Boring bars for machining small parts can use the inserts listed in the table below by changing the clamp screws.

| Insert Type                          | Clamp Screw | Insert Type                            | Clamp Screw |
|--------------------------------------|-------------|----------------------------------------|-------------|
| CPGT0802 $\bigcirc\bigcirc$ (Ø7.94)  | TS3         | TPGX0802 $\bigcirc\bigcirc$ (Ø4.76)    | CS200T      |
| CPGT0903 $\bigcirc\bigcirc$ (Ø9.525) | TS4         | TPG/MX0902 $\bigcirc\bigcirc$ (Ø5.56)  | CS250T      |
|                                      |             | TPG/MX1103 $\bigcirc\bigcirc$ (Ø9.525) | CS300890T   |

★ If the screw is too long, shorten it as necessary.

Note 1) If chatter or vibrations occur, adjust the cutting conditions accordingly.

Note 2) If the tool overhang amount is L/D = 5 or more for a carbide shank or L/D = 3 or more for a steel shank, please reduce the cutting speed by 10% to 20%.

Note 3) Regarding the feed rate and depth of cut for breakers not listed in the table, please refer to page A056 of for 7° positive and page A064 for 11° positive types. For cutting speed, please refer to the grade introduction page A030.

# HOW TO READ THE STANDARD OF GROOVING AND CUTTING OFF

## ●How this section page is organised

- ① Classified according to external or internal applications.
- ② Sub-classified according to product series.  
(Refer to the index on the next page.)

### FIGURE SHOWING THE TOOLING APPLICATION

Uses illustrations and arrows to depict available machining applications such as cutting off, grooving, and copying.

### INDICATION OF HOLDER TYPE ACCORDING TO APPLICATION

Indicates the holder types, such as the 00° type or the 90° type, according to machining application.

### TITLE OF PRODUCT

### PRODUCT SECTION

### INDICATION OF EXTERNAL/ FACE/INTERNAL APPLICATION

### GEOMETRY

### SPARE PARTS FOR HOLDER

# GROOVING / CUTTING OFF

## GY SERIES (EXTERNAL)

### 1 00° type holder

Note ① For modular blades and modular holders, please order separately.  
 Note ② Please use right hand modular blade for right hand holder and left hand modular blade for left hand holder.

## GY SERIES

**A wide selection of holders and inserts available for a diverse range of grooving and cutting off applications**

### External • Face holders

Corresponding blades to a variety of modular holders with different shank sizes.

**Monoblock type**

**Modular type**

GROOVING / CUTTING OFF

Various depths of groove possible with a single tool, by using different modular blades.

Various sizes of face grooves from a wide array of modular blades.

### Internal holders

A wide range of holders available from minimum diameter of 25 mm.

**Monoblock type**  
Min. cutting diameter  
Ø25, Ø32

**Modular type**  
Min. cutting diameter  
Ø40, Ø50,  
Ø60, Ø70

Short shank types are stock standard.

**Monoblock type**

**Modular type**

Short Standard

Short Standard

# Original insert design leading the way to new grooving and cutting off applications

Highly reliable insert clamping

Safety keys prevent insert movement.

The convex geometry ensures high precision clamping.

## TRIFORCE System for increased stability and performance!

### TRIFORCE System

The TRIFORCE system ensures the blade is securely fixed in 3 directions (side, front and top), giving high rigidity for a stable grooving and cutting performance.

### A WIDE SELECTION OF INSERTS

- Selection of groove widths

- Different corner radii available

## INSERT

### ● Chipbreaker system

## MP9000 Series

- The high Al-rich (Al, Ti)N single layer coating provides stabilization of the high hardness phase and succeeds in dramatically improving wear, crater and welding resistance.

High Al-rich (Al, Ti)N Single Layer Coating

Special Cemented Carbide Substrate

## MY5015

- MY5015 is a CVD coated grade with excellent wear resistance even at high temperatures. It provides longer tool life when machining cast and ductile cast irons. Also suitable for high speed continuous cutting of steels.

CVD Coated Carbide

Carbide substrate

## VP20RT (1st Recommendation)

- PVD coated grade suitable for a wide range of applications. The combination of a special tough cemented carbide substrate with MIRACLE coating provides an excellent balance of wear and fracture resistance.

MIRACLE Coating

Carbide substrate (90.5HRA)

## RT9010

- First recommended grade for titanium alloys. It is recommended for use on non-ferrous alloys.

## NX2525

- NX2525, a cermet grade for finish machining of steels and for good surface finishes at lower cutting speeds.

## VP10RT (2nd Recommendation)

- PVD coated grade with a cemented carbide substrate harder than VP20RT. For use on difficult-to-cut materials and for extending tool life.

MIRACLE Coating

Carbide substrate (HRA92.0)

## BC8110

- A coated PCBN grade for continuous cutting, which provides longer life when machining hardened steel.

F

GROOVING / CUTTING OFF

## BLANK INSERTS

- Blank inserts for custom grinding

1 Edge Type

2 Edge Type

## RT9010/RT9020 for blank insert

- First recommendation for blanks inserts is RT9020 due to the tougher carbide substrate that is suitable for a wider range of applications. RT9010 has a harder substrate than RT9020 and is ideal for longer tool life on stable cutting applications. Both grades are recommended to have a coating applied that is suitable for the required application.

\* Blank inserts to be ground by customers.

# GY SERIES ORDER NUMBER

## ■ INSERT

## ■ PCBN INSERT

\*1 Select a seat size with the same symbol as that of modular blade and monoblock holder.

## ■ MODULAR BLADE

### ● EXTERNAL/INTERNAL/FOR RECESSING

### ● FACE GROOVING

\*1 Select a seat size with the same symbol as that of the insert.

\*2 The maximum groove depth is a value when used for external grooving and changes according to the insert used. For internal grooving, refer to the maximum groove depth on pages F086—F092.

\*3 GYM20R/LA-○10, GYM20R/LA-○12, GYM25R/LA-○12 and GYM25R/LA-○14 can be used for both external and internal grooving.

\*1 Groove width corresponding to the circlip.

\*2 The dimension depends on the chipbreaker. Refer to the F017 "L dimension tolerance conversion table".

  G-class insert with MF chipbreaker is available for single-step machining.

  Conventional GY series insert is available for single-step machining.

  Machined in multiple steps or by cross feed machining.

\*1 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F012—F015.

\*2 The maximum cut off diameter (CUTDIA) varies according to the insert used. The cut off diameter is double the maximum groove depth (CDX) of inserts on pages F012—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LH and LH 3 values may vary.

\*4 The maximum groove depth (CDX) is limited by the workpiece diameter. For details, please refer to page F102.

\*1 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F012—F015.

\*2 The maximum cut off diameter (CUTDIA) varies according to the insert used. The cut off diameter is double the maximum groove depth (CDX) of inserts on pages F012—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LH and LH 3 values may vary.

\*4 The maximum groove depth (CDX) is limited by the workpiece diameter. For details, please refer to page F102.

\*1 The maximum groove depth (**CDX**) varies according to the insert used. Please refer to the maximum groove depth (**CDX**) of inserts on pages F011—F015.

\*2 The maximum cut off diameter (**CUTDIA**) varies according to the insert used.

The cut off diameter is double the maximum groove depth (**CDX**) of inserts on pages F011—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then **LF**, **LH**, **LH2** and **WF** values may vary.

\*4 The maximum groove depth (**CDX**) is limited by the workpiece diameter. For details, please refer to page F102.

● : Inventory maintained.

★ Wrench : ① : Clamp Screw, ② : Blade Screw

Right hand tool holder shown.

\*1 The maximum groove depth (**CDX**) varies according to the insert used. Please refer to the maximum groove depth (**CDX**) of inserts on pages F011—F015.

\*2 The maximum cut off diameter (**CUTDIA**) varies according to the insert used.

The cut off diameter is double the maximum groove depth (**CDX**) of inserts on pages F011—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then **LF**, **LH**, **LH2** and **WF** values may vary.

\*4 The maximum groove depth (**CDX**) is limited by the workpiece diameter. For details, please refer to page F102.

● : Inventory maintained.

★ Wrench : ① : Clamp Screw, ② : Blade Screw

Right hand tool holder shown.

### 00° type holder

Diagram illustrating the correct insertion of GY2M cables into cable glands. The glands are labeled with their part numbers: GS-GM, GU-GL, MS-MM, BM, and R/L-L-GM. The diagrams show the cable being inserted into the gland and the resulting position of the cable within the gland.

- Insert GY2M<sup>GS</sup> -GS-GM**: Cable is inserted into the gland and the gland is closed.
- Insert GY2M<sup>GU</sup> -GU-GL**: Cable is inserted into the gland and the gland is closed.
- Insert GY2M<sup>MS</sup> -MS-MM**: Cable is inserted into the gland and the gland is closed.
- Insert GY2M<sup>BM</sup> -BM**: Cable is inserted into the gland and the gland is closed.
- Insert GY2M<sup>R/L-L-GM</sup> -R/L-L-GM**: Cable is inserted into the gland and the gland is closed.

**Note 1) For modular blades and modular holders, please order separately.**

**Note 2) Please use right hand modular blade for right hand holder and left hand modular blade for left hand holder.**

Right hand tool holder shown.

\*1 The maximum groove depth (**CDX**) varies according to the insert used. Please refer to the maximum groove depth (**CDX**) of inserts on pages F011—F015.

\*2 The maximum cut off diameter (**CUTDIA**) varies according to the insert used.

The cut off diameter is double the maximum groove depth (**CDX**) of inserts on pages F011—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then **LF**, **LH**, **LH2** and **WF** values may vary.

\*4 The maximum groove depth (**CDX**) is limited by the workpiece diameter. For details, please refer to page F102.

● : Inventory maintained.

★ Wrench : ① : Clamp Screw, ② : Blade Screw

Right hand tool holder shown.

\*1 The maximum groove depth (**CDX**) varies according to the insert used. Please refer to the maximum groove depth (**CDX**) of inserts on pages F011—F015.

\*2 The maximum cut off diameter (**CUTDIA**) varies according to the insert used.

The cut off diameter is double the maximum groove depth (**CDX**) of inserts on pages F011—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then **LF**, **LH**, **LH2** and **WF** values may vary.

\*1 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*2 The maximum cut off diameter (CUTDIA) varies according to the insert used.

The cut off diameter is double the maximum groove depth (CDX) of inserts on pages F011—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LH, LH2 and WF values may vary.

\*1 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*2 The maximum cut off diameter (CUTDIA) varies according to the insert used.

The cut off diameter is double the maximum groove depth (CDX) of inserts on pages F011—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LH, LH2 and WF values may vary.

Right hand tool holder shown.

\* Wrench : ① : Clamp Screw, ② : Blade Screw

\*1 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*2 The maximum cut off diameter (CUTDIA) varies according to the insert used.

The cut off diameter is double the maximum groove depth (CDX) of inserts on pages F011—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LH, LH2 and WF values may vary.

Right hand tool holder shown.

\*1 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*2 The maximum cut off diameter (CUTDIA) varies according to the insert used.

The cut off diameter is double the maximum groove depth (CDX) of inserts on pages F011—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LH and WF values may vary.

\*4 The maximum groove depth (CDX) is limited by the workpiece diameter. For details, please refer to page F102.

★ Wrench : ① : Clamp Screw, ② : Blade Screw

GROOVING / CUTTING OFF

IDENTIFICATION > F008, F009  
CUTTING CONDITIONS > F100  
CAUTION FOR USE > F105

F037

# 2

**Note 1) For modular blades and modular holders, please order separately.**

**Note 2) Please use left hand modular blade for right hand holder and right hand modular blade for left hand holder.**

Right hand tool holder shown.

[illegible]

The cut off diameter is double the maximum groove depth (**CDX**) of inserts on pages F011—F015.

\*4 The maximum groove depth (**CDX**) is limited by the workpiece diameter. For details, please refer to page F102.

● : Inventory maintained.

# GY SERIES (EXTERNAL)

2

90° type holder

Note 1) For modular blades and modular holders, please order separately.

Note 2) Please use left hand modular blade for right hand holder and right hand modular blade for left hand holder.

Right hand tool holder shown.

\*1 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*2 The maximum cut off diameter (CUTDIA) varies according to the insert used.

The cut off diameter is double the maximum groove depth (CDX) of inserts on pages F011—F015.

\*3 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LH and WF values may vary.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

● : Inventory maintained.

★ Wrench : ① : Clamp Screw, ② : Blade Screw

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

● : Inventory maintained.

★ Wrench : ① : Clamp Screw, ② : Blade Screw

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH, LH2, and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 Dimensions shown are when standard insert is used. If other insert geometries are used then LF, LH and WF values may vary.

\*2 The maximum groove depth (CDX) varies according to the insert used. Please refer to the maximum groove depth (CDX) of inserts on pages F011—F015.

\*1 The maximum groove depth (CDX) varies according to the cutting diameter (DMIN). For details, please refer to page F115.

\*2 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LDRED, WF and WF2 values may vary.

\*3 The maximum groove depth (CDX) is a value within the dimension LDRED.

Note 1) For modular blades and modular holders, please order separately.

Note 2) Please use left hand modular blade for right hand holder and right hand modular blade for left hand holder.

## ● Monoblock type (Air / coolant through)

\*1 The maximum groove depth (CDX) varies according to the cutting diameter (DMIN). For details, please refer to page F115.

\*2 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LDRED, WF and WF2 values may vary.

\*3 The maximum groove depth (CDX) is a value within the dimension LDRED.

● : Inventory maintained.

\*1 The maximum groove depth (CDX) varies according to the cutting diameter (DMIN). For details, please refer to page F115.

\*2 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LDRED, WF and WF2 values may vary.

\*3 The maximum groove depth (CDX) is a value within the dimension LDRED.

● : Inventory maintained.

●Modular blade type (Air / coolant through)

★ Wrench : ① : Clamp Screw, ② : Blade Screw

Right hand tool holder shown.

\*1 The maximum groove depth (CDX) varies according to the cutting diameter (DMIN). For details, please refer to page F115.

\*2 Dimensions shown are when the standard insert is used. If other insert geometries are used then LF, LDRED, WF and WF2 values may vary.

\*3 The maximum groove depth (CDX) is a value within the dimension LDRED.

\*Modular blade type: Blades for face machining indicate a code for the minimum face grooving diameter. Example: GYM25RD-D12-040

The "○" symbol is a position to insert the letter "A" for external diameter machining or "D" for face machining.

Note 1) The indicated dimensions are values for standard inserts (GM breakers). If other inserts are mounted, LF and LH may differ.

● : Inventory maintained.

\*Modular blade type: Blades for face machining indicate a code for the minimum face grooving diameter. Example: GYM25RD-D12-040

The "○" symbol is a position to insert the letter "A" for external diameter machining or "D" for face machining.

Note 1) The indicated dimensions are values for standard inserts (GM breakers). If other inserts are mounted, LF and LH may differ.

DMIN = Min. Cut Diameter

\*Modular blade type: Blades for face machining indicate a code for the minimum face grooving diameter. Example: GYM25RD-D12-040

The "○" symbol is a position to insert the letter "A" for external diameter machining or "D" for face machining.

Note 1) The indicated dimensions are values for standard inserts (BM breakers). If other inserts are mounted, LF and LH may differ.

F
